

PART 1 - GENERAL (GEN)

GEN 0.

GEN 0.1 PREFACE

0.1.1 NAME OF PUBLISHING AUTHORITY

The AIP BAHRAIN FIR is published by the authority of Civil Aviation Affairs of the Kingdom of Bahrain and the Civil Aviation Authority of the State of Qatar.

0.1.2 APPLICABLE ICAO DOCUMENTS

The AIP is prepared in accordance with the Standards and Recommended Practices (SARPS) of Annex 15 to Chicago Convention and the Aeronautical Information Services Manual (ICAO Doc 8126 - AN 872). Charts contained in the AIP are produced in accordance with Annex 4 to the Chicago Convention and the Aeronautical Chart Manual (ICAO Doc 8697 - AN 889). Differences from ICAO Standards, Recommended Practices and Procedures are given in section **GEN 1.7**.

0.1.3 PUBLICATION MEDIA

See **GEN 3.1.3.2**.

0.1.4 THE AIP STRUCTURE AND ESTABLISHED REGULAR AMENDMENT INTERVAL

0.1.4.1 The AIP structure

The AIP forms part of the Integrated Aeronautical Information Package of which details are given in Section **GEN 3.1**. The principal structure is shown in graphic form at the end of this GEN 0.1 subsection.

The AIP is the basic aeronautical information document for the BAHRAIN FIR / BAHRAIN UIR, and contains lasting information essential to air navigation. For other details reference should be made to the AIP of the State concerned.

The AIP is divided into three Parts, General (GEN), En-route (ENR) and Aerodromes (AD), each divided into sections and subsections containing various types of information subjects.

Note: the electronic AIP BAHRAIN FIR (see **GEN 3.1.3.1**) may not include certain subsections listed hereafter which are not relevant for an electronic AIP. These subsections are marked as underlined.

0.1.4.1.1 **Part 1 General (GEN)**

Part 1 consists of the five sections containing information as briefly described hereafter.

GEN 0

Preface; Record of AIP Amendments; Record of AIP Supplements; Checklist of AIP pages; List of hand amendments to the AIP; and the Table of Contents to Part 1.

GEN 1. National regulations and requirements

Designated authorities; Entry, transit and departure of aircraft; Entry, transit and departure of passengers and crew; Entry, transit and departure of cargo; Aircraft instruments, equipment and flight documents; summary of national regulations and international agreements / conventions; and Differences from ICAO Standards, Recommended Practices and Procedures for the Kingdom of Bahrain and the State of Qatar.

GEN 2. Tables and codes

Measuring system, aircraft markings, holidays; Abbreviations used in AIS publications; Chart symbols; Location indicators; List of radio navigation aids; Conversion tables; and Sunrise / Sunset tables.

GEN 3. Services

Aeronautical information services; Aeronautical charts; Air traffic services; Communication services; Meteorological services; and rescue.

GEN 4. Charges for aerodromes / heliports and air navigation services

Aerodrome / heliport charges; and Air navigation services charges.

0.1.4.1.2 **Part 2 En - route (ENR)**

Part 2 consists of seven sections containing information as briefly described hereafter.

ENR 0.

Preface; Record of Amendments; Record of AIP Supplements; Check list of AIP pages; List of hand amendments to the AIP; and the Table of Content to Part 2.

ENR 1. General rules and procedures

General rules; Visual flight rules; Instrument flight rules; ATS airspace classification; Holding, approach and departure procedures; Radar services and procedures; Altimeter setting procedures; Regional supplementary procedures; Air traffic flow management; Flight planning; Addressing of flight plan messages; Interception of civil aircraft; Unlawful interference; and Air traffic incidents.

ENR 2. Air traffic services airspace

Detailed description of:

Flight information regions (FIR), Upper flight information regions (UIR), Terminal control areas (TMA); and other regulated airspace.

ENR 3. ATS routes

Detailed description of:

Lower ATS routes; Upper ATS routes; Area navigation routes; Helicopter routes; other routes; and En-route holding.

Note: Other types of routes which are specified in connection with procedures for traffic to and from aerodromes / heliports are described in the relevant section of the Part 3 Aerodromes.

ENR 4. Radio navigation aids / systems

Radio navigation aids en-route; Special navigation systems; Global navigation satellite system, Name-code designators for significant points; and Aeronautical ground lights en -route.

ENR 5. Navigation Warnings

Prohibit, restricted and danger areas; Military exercise and training areas; Other activities of dangerous nature; Air navigation obstacles en-route; Aerial sporting and recreational activities; and Wildlife Management and areas with sensitive fauna.

ENR 6. En - route charts

En-route Chart ICAO and index charts.

0.1.4.1.3 Part 3 Aerodromes (AD)

Part 3 consists of four sections containing information as briefly described hereafter.

AD 0.

Preface; Record of AIP Amendments; Record of AIP Supplements; Check list of AIP pages; List of hand amendments to the AIP; and the Table of Contents to Part 3.

AD 1. Aerodromes / Heliports Introduction

Aerodrome / heliport availability; Rescue and Fire fighting services and snow plan; Index to aerodromes and heliports, Grouping of aerodromes / heliports, Status of certification of aerodromes.

AD 2. Aerodromes

Detailed information about aerodromes, including helicopter landing areas, if located at the aerodromes.

AD 3. Heliports

Detailed Information about heliports (not located at aerodromes).

0.1.4.2 Regular amendment Interval

The AIP BAHRAIN FIR will be updated on regular basis according the AIRAC dates as published in **GEN 3.1.4.2**. Whenever an AIRAC AMDT is published a trigger NOTAM will be issued by at least three days prior to effective date. This NOTAM will give a brief description of the AIRAC's content and shall come into effect on the same date of the AIRAC.

0.1.5 COPYRIGHT POLICY

To be developed

0.1.6 SERVICES TO CONTACT IN CASE OF DETECTED AIP ERRORS OR OMISSIONS

The AIP BAHRAIN FIR and associated NOTAM are compiled from a variety of sources. Except for Kingdom of Bahrain, all information is acquired from independent states and from commercial sources. The greatest care is exercised in the assembly and compilation of information for the AIP BAHRAIN FIR and associated NOTAM and they are considered to be as reliable as possible at the time of issue. Civil Aviation Affairs will not be held responsible, however, for the accuracy of the content of the AIP or NOTAM or for any omissions therefrom, neither will Civil Aviation Affairs be responsible for the adequacy or receipt of NOTAM or AIP amendments.

Any errors and omissions which may nevertheless be detected, as well as any correspondence concerning the Integrated Aeronautical Information Package, should be referred to:

GEN 1. NATIONAL REGULATIONS AND REQUIREMENTS**GEN 1.1 DESIGNATED AUTHORITIES****1.1.1 REQUIREMENTS AND PROCEDURES**

1.1.1.1 The requirements for entry and departure of aircraft engaged in international flights, and the standard procedures for clearance of these aircraft is given for the Kingdom of Bahrain. (for state of Qatar, refer to Qatar AIP)

Note: It is solely the aircraft operator's responsibility to obtain any required landing and overflight permission from the appropriate state authorities.

1.1.1.2 Permission to and / or overfly issued by Civil Aviation Affairs Bahrain related only to BAHRAIN INTERNATIONAL Airport and the territorial airspace of the Kingdom of Bahrain.

1.1.1.3 Clearances issued by the BAHRAIN ACC or Flight Information Centre are based on ATC considerations and do not absolve operators from compliance with the states facilitation regulations.

1.1.2 DESIGNATED AUTHORITIES

The addresses of designated authorities concerned with the facilitation of international air navigation (e.g. civil aviation, meteorology, customs, immigration, health, en - route and aerodrome / heliport charges, agricultural quarantine and aircraft accident investigation) containing, for each authority.

1.1.3 DIFFERENCES FROM ICAO STANDARDS AND RECOMMENDED PRACTICES

Where available, information concerning any difference from ICAO Annex 9 is published separately for each individual State. Additional information is published when received.

KINGDOM OF BAHRAIN**1.1.4 INTRODUCTION**

The requirements for entry and departure of aircraft engaged in international flights, and the standard procedure for clearance of these aircraft at international airports, are given for the information and guidance of operators conducting international flights.

1.1.5 DESIGNATED AUTHORITIES

The postal and telegraphic addresses of the designated authorities concerned with the entry, transit and departure of international air navigation and for the collection of fees therefrom, are as follows:

GEN 1.2 ENTRY, TRANSIT AND DEPARTURE OF AIRCRAFT

1.2.1 KINGDOM OF BAHRAIN

1.2.1.1 REGULATIONS AND REQUIREMENTS FOR ADVANCE NOTIFICATION AND APPLICATIONS FOR PERMISSION CONCERNING ENTRY, TRANSIT AND DEPARTURE OF AIRCRAFT ON INTERNATIONAL FLIGHTS

1.2.1.1.1 GENERAL

All flights landing in, departing from or overflying the territory of Bahrain shall comply with Bahrain Civil Aviation Law and Regulations and must include a valid mailing address of the company for which payment invoice must be issued to, failure to comply will result in rejecting the relevant approval request.

1.2.1.1.1.1 INFORMATION REQUIRED FROM AIRCRAFT OPERATORS

The following information is required from all aircraft operators for any type of operations:

1. Aircraft Operator (Air Operator's Certificate (AOC) - holder) and Address
2. Aircraft Charterer (if any)
3. Call Sign / Flight Number or Registration mark(s)
4. Aircraft Type & Nature of flight
5. Full Sector or Flight (from / to) & ETA / ETD
6. If Dangerous Goods are carried, refer also to **GEN 1.4**
7. Proposed date(s) of flight(s)
8. Aircraft configuration (passenger and cargo capacity)
9. Postal address of the company for collection of bills and payments.
10. Postal address of the agent and its client, if any.
11. Finance section contact details, telephone, fax and email.

1.2.1.1.1.2 APPLICATIONS FOR APPROVAL

All applications should be addresses to the attention of:

Director of Air Transport
P.O. Box 586
Kingdom of Bahrain
TEL: +973 17329035/+973 17329011/+973 17329061/+973 17329096
Telefax:+973 17329083/+973 17333278
e-mail: schedule@mtt.gov.bh
AFS: OBBIYAYX
SITA: BAHAPYF

Aircraft landing in or departing from the territory of Bahrain must first land at or finally depart from the international Airport.

1.2.1.1.2 SCHEDULED OPERATIONS

1.2.1.1.2.1 TRAFFIC STOPS IN THE TERRITORY OF BAHRAIN

For regular international scheduled flights into Bahrain, the airline must be designated pursuant to a bilateral or multilateral agreement to which the government of Bahrain and that of the State in which the airline is registered are parties, or have been granted a Temporary Operating Permit (T.O.P.) by Bahrain CAA. Applications should be made 30 days prior to the proposed date of commencement of operation to the address shown in **GEN 1.2.1.1.1.2**. The following information and documents are required from aircraft operators in addition to the information shown under **GEN 1.2.1.1.1.1** above:

a) Information

1. Period of Operation
2. Aircraft Configuration (Passengers & Cargo Capacity)
3. Frequency (days of the week)

Note: see recommended Airlines Schedule Application Format

b) Pre-requisite valid documents:

1. Air Operator's Certificate, reflecting the aircraft registration mark(s)
2. Certificate of Registration
3. Certificate of Airworthiness
4. Insurance Certificate with full liability coverage (refer to GEN 1.2.1.1.8)
5. Noise Certificate
6. Aircraft Radio Station License
7. ACAS II / TCAS Certificate (mandatory within Bahrain airspace)
8. Basic Area Navigation (B - RNAV) Certificate, if equipped
9. RVSM Certificate, when operating above 29000 feet

10. In case of a leased aircraft:

- a) A copy of the lease agreement, approved by the State of Registry and the state operator; and
- b) Conformity statement from the State of Registry, stating that it will remain responsible for the safety oversight.
- (c) In case of transfer of functions of the State of Registry to the State of Operator, evidence is required showing the state responsible for safety oversight.

1.2.1.1.2.2 OVERFLYING AND TECHNICAL STOPS

1.2.1.1.2.2.1 Subject to the observance of the applicable rules and regulations, aircraft registered in ICAO States and operated by an airline of any contracting State may overfly or make non-traffic stops in the territory of Bahrain provided the State concerned being signatory to the International Air Transit Agreement. There is no requirement to request for overflying permission for such aircraft. Applications for non-traffic stops should be made to the address shown in **GEN 1.2.1.1.1.2** a minimum notice period of one week is required for administrative and operational reasons. The following information is required from aircraft operators in addition to the information shown under **GEN 1.2.1.1.1.1** above:

1. Period of Operation

2. Aircraft Configuration (Passengers & Cargo Capacity)

3. Frequency (days of the week)

1.2.1.1.2.2.2 Operators of aircraft registered in States that are not signatory to the ICAO convention must be obtain prior approval to overfly or land in the territory of Bahrain. A minimum notice period of one week is required for administrative and operational reasons.

Note: see recommended Airlines Schedules Application Format

1.2.1.1.2.3 DOCUMENTARY REQUIREMENTS FOR THE CLEARANCE OF AIRCRAFT

1.2.1.1.2.3.1 It is necessary that the aircraft documents shown in the table in **GEN 1.2.1.1.2.4** be submitted by aircraft operators for the clearance on entry and departure of their aircraft to and from Bahrain.

1.2.1.1.2.3.2 One copy of the General Declaration must be signed by the pilot - in - command or an authorized agent.

1.2.1.1.2.3.3 All documents listed below must follow the ICAO standard format, set forth in the relevant appendices to Annex 9, must be furnished in English and be completed legibly.

1.2.1.1.2.3.4 No visas are required in connection with such documents.

1.2.1.1.2.4 AIRCRAFT DOCUMENTS REQUIRED (ARRIVAL / DEPARTURES)

REQUIRED BY	GENERAL DECLARATION	PASSENGER MANIFEST	CARGO MANIFEST
IMMIGRATION	NIL	NIL	NIL
HEALTH	1	1	NIL
CUSTOMS	NIL / 1	NIL	1 / 1
TOTAL	2	1	2

Note: If no passengers are embarking or disembarking and no articles are loaded or unloaded, no documents except copies of the General Declaration need to be submitted.

1.2.1.1.2.5 PUBLIC HEALTH MEASURES APPLIED TO AIRCRAFT

If more than four weeks have elapsed since the date of issue of the certificate of Residual Disinfection, and the aircraft has originated in or arrived from a malarious area or a yellow fever endemic area, aerosol disinfection of the aircraft should be carried out before taking off, or on arrival.

1.2.1.1.3 NON SCHEDULED OPERATIONS

1.2.1.1.3.1 TRAFFIC STOPS IN THE TERRITORY OF BAHRAIN

If an operator intends to make a non - scheduled stop in the territory of Bahrain for the purpose of taking on or discharging passengers, cargo or mail, the Air Operator's Certificate (AOC) - holder should apply to the address shown in **GEN 1.2.1.1.1.2**, a minimum notice period of one week is required. The following valid documents are required from AOC - holder in addition to the information shown under **GEN 1.2.1.1.1.1** above:

1. Air Operator's Certificate, reflecting the aircraft registration mark(s)

2. Certificate of Registration
3. Certificate of Airworthiness
4. Insurance Certificate with full liability coverage (refer to **GEN 1.2.1.1.8**)
5. Noise Certificate
6. Aircraft Radio Station License
7. ACAS II / TCAS Certificate (mandatory within Bahrain airspace)
8. Basic Area Navigation (B - RNAV) Certificate, if reequipped
9. RVSM Certificate, when operating above 29000 FT
10. In case of a leased aircraft:

(a) A copy of the lease agreement, approved by the State of Registry and the State of Operator; and

(b) Conformity statement from the State of Registry, stating that it will remain responsible for the safety oversight.

(c) In case of transfer of functions of the State of Registry to the State of Operator, evidence is required showing the state responsible for safety oversight.

1.2.1.1.3.2 OVERFLYING AND TECHNICAL STOPS

1.2.1.1.3.2.1 Subject to the observance of the applicable rules and regulations, aircraft registered in ICAO States and operated by an airline of any contracting State may over fly or make non - traffic stops in the territory of Bahrain provided the State concerned being signatory to the Chicago Convention on International Civil Aviation. There is no requirement to request for over flying permission for such aircraft except when the flight is involved in Diplomatic or Military operations e.g. State VIP, transportation of ammunitions etc. in which case an application for approval should be made in accordance with **GEN 1.2.1.1.5.1** below. Applications for non - traffic stops should be made to the address shown in **GEN 1.2.1.1.1.2**. A minimum notice period of 48 hours is required for administrative and operational reasons. The following information is required from aircraft operators in addition to the information shown under **GEN 1.2.1.1.1.1** above:

1. Date of Flight(s)

2. Type of Cargo (if any)

1.2.1.1.3.2.2 Operators of aircraft registered in States that are not signatory to the ICAO convention must obtain prior approval to overfly or land in the territory of Bahrain. A minimum notice period of one week is required for the administrative and operational reasons.

1.2.1.1.3.3 DOCUMENTARY REQUIREMENTS FOR THE CLEARANCE OF AIRCRAFT

The same as for scheduled flights (see **GEN 1.2.1.1.2.3**).

1.2.1.1.3.4 AIRCRAFT DOCUMENTS REQUIRED (ARRIVAL / DEPARTURE)

REQUIRED BY	GENERAL DECLARATION	PASSENGER MANIFEST	CARGO MANIFEST
IMMIGRATION	1	1	NIL
HEALTH	1	1	NIL
CUSTOMS	1 / 1	NIL	1
TOTAL	4	2	1

1.2.1.1.3.5 PUBLIC HEALTH MEASURES APPLIED TO AIRCRAFT

The same as for scheduled flights.

1.2.1.1.4 PRIVATE / GENERAL AVIATION OPERATIONS

1.2.1.1.4.1 TRAFFIC STOPS IN THE TERRITORY OF BAHRAIN

If an operator wishes to land in the territory of Bahrain for the purpose of taking on or discharging of passengers, cargo or mail, he should apply for approval to the address shown in **GEN 1.2.1.1.1.2**, a minimum notice period of 48 hours is required for administrative and operational reasons. The following information is required from aircraft operators in addition to the information shown under **GEN 1.2.1.1.1.1** above:

1. Purpose of Flight
2. Passenger & Company Name
3. Name of VIP (if any)
4. Type of Cargo (if any)
5. Hosting Company and / or Contact in Bahrain

Note: see recommended Request Processing Information List

1.2.1.1.4.2 OVERFLYING AND TECHNICAL STOPS

1.2.1.1.4.2.1 Subject to the observance of the applicable rules and regulations, there is no requirement to request permission for overflying or refuelling / crew rest stops for such aircraft except when the flight is involved in Diplomatic or Military Operations e.g. State VIP, Transportation of ammunitions etc. in which case an application for approval should be made in accordance with **GEN 1.2.1.1.5.1** below.

1.2.1.1.4.2.2 Operators of aircraft registered in states that are not signatory to the ICAO convention must obtain prior approval to overfly or land in the territory of Bahrain. A minimum notice period of 48 hours is required for administrative and operational reason.

Note: see recommended Request Processing Information List

1.2.1.1.4.3 DOCUMENTARY REQUIREMENTS FOR THE CLEARANCE OF AIRCRAFT

The same as for scheduled flights (see **GEN 1.2.1.1.2.3**)

1.2.1.1.4.4 AIRCRAFT DOCUMENTS REQUIRED (ARRIVAL / DEPARTURE)

REQUIRED BY	GENERAL DECLARATION	PASSENGER MANIFEST	CARGO MANIFEST
IMMIGRATION	1	1	NIL
HEALTH	1	1	NIL
CUSTOMS	1 / 1	NIL	1
TOTAL	4	2	1

1.2.1.1.4.5 PUBLIC HEALTH MEASURES APPLIED TO AIRCRAFT

The same as for non - scheduled flights

1.2.1.1.5 APPLY FOR APPROVAL

Any State or Military aircraft (including chartered flights) wishing to overfly, land in or depart from the territory of Bahrain shall apply for approval. A minimum notice period of one week before the intended date of overflight, arrival or departure is required.

Applications should be made to:

1.2.1.1.5.1 Address

Ministry of Foreign Affairs
P.O. Box 547
Kingdom of Bahrain
Telefax: +973 17210575
Telex: 8228 KARJIA BN

With a copy to:

Director of Air Transport
P.O. Box 586
Kingdom of Bahrain
Telefax: +973 17333278
AFS: OBBIYAYX
SITA: BAHAPYF

1.2.1.1.6 Information required from aircraft operators

The following information is required from aircraft operators in addition to the information shown under **GEN 1.2.1.1.1.1** above:

1. Purpose of Flight
2. Name of VIP (if any)
3. Type of Cargo (if any)

1.2.1.1.7 VVIP / VIP FLIGHT OPERATIONS

Any operator carrying out a VVIP / VIP flight for the purpose of landing in, departing from or overflying the territory of Bahrain shall apply for approval to the Ministry of Foreign Affairs as detailed in **GEN 1.2.1.1.5** above.

1.2.1.1.8 INSURANCE COVER IN RESPECT OF LIABILITY FOR PASSENGERS, BAGGAGE, CARGO AND THIRD PARTIES**1.2.1.1.8.1 REQUIREMENT FOR MINIMUM INSURANCE COVER**

1.2.1.1.8.1.1 Air carriers and aircraft operators are required to provide a minimum insurance cover in respect of passengers, baggage and cargo in accordance with the rules of Montreal Convention (signed on 28 May 1999); and in respect of third parties in accordance with **GEN 1.2.1.1.8.4** below.

1.2.1.1.8.1.2 The insurance shall cover aviation - specific liability in respect of passengers, baggage, cargo and third parties. Regarding passengers, baggage and cargo insurance shall include cover for death and personal injury caused by accidents and for loss or destruction of or damage to baggage and cargo. Regarding third parties, insurance shall include cover for death, personal injury and damage to property caused by accidents.

1.2.1.1.8.2 DEFINITIONS

- a) "air carrier" means an air transport undertaking with a valid operating license or Air Operator's Certificate;
- b) "aircraft operator" means the person or entity, not being an air carrier, who has continual effective disposal of the use or operation of the aircraft; the natural or legal person in whose name the aircraft is registered shall be presumed to be the operator, unless that person can prove that another person is the operator;
- c) "flight means";
 - with regard to passengers and unchecked baggage, the period of transport of the passengers by aircraft including their boarding and disembarkation,
 - with regard to cargo and checked baggage, the period of transport of baggage and cargo from the moment the baggage or cargo is handed to the air carrier until the moment of delivery to the entitled recipient,
 - with regard to third parties, the use of an aircraft from the moment when power is applied to its engines for the purpose of taxiing or actual take - off until the moment when it is on the surface and its engines have come to a complete stop; additionally, it shall mean the moving of an aircraft by towing and push - back vehicles or by powers which are typical for the drive and lift of aircraft, particularly air streams;
- d) "SDR" means a Special Drawing Right as defined by the International Monetary Fund;
- e) "MTOM" means the Maximum Take - off Mass, which corresponds to a certified amount of specific to all aircraft types, as stated in the certificate of airworthiness of the aircraft;
- f) "Passenger" means any person who is on the flight with the consent of the air carrier or the aircraft operator, excluding on - duty members of both the flight crew and the cabin crew;
- g) "third party" means any legal or natural person, excluding passengers and on - duty members of both the flight crew and the cabin crew;
- h) "commercial operation" means an operation for remuneration and / or hire.

1.2.1.1.8.3 PRINCIPLES OF INSURANCE

1.2.1.1.8.3.1 The insured risks shall include acts of war, terrorism, hijacking, acts of sabotage, unlawful seizure of aircraft and civil commotion.

1.2.1.1.8.3.2 Air carriers and aircraft operators shall ensure that insurance cover exists for each and every flight, regardless of whether the aircraft operated is at their disposal through ownership or form of lease agreement, or through joint or franchise operations, code - sharing or any other agreement of the same nature.

1.2.1.1.8.4 INSURANCE IN RESPECT OF LIABILITY FOR THIRD PARTIES

In respect of liability for third parties, the minimum insurance cover per accident, for each and every aircraft, shall be:

CATEGORY	MOTOM (kg)	MINIMUM insurance (million SDRs)
1	< 500	0.75
2	< 1000	1.5
3	< 2700	3
4	< 6000	7
5	< 12000	18
6	< 25000	80
7	< 50000	150
8	< 200000	300
9	< 500000	500
10	= / > 500000	700

1.2.1.1.8.5 **AMENDMENT TO THE INSURANCE VALUES**

The insurance values may be amended, as appropriate, when amendments in the relevant international treaties indicate the necessity thereof.

1.2.1.1.8.6 **EVIDENCE OF ADEQUATE INSURANCE COVER**

Air carriers and air operators are required to provide evidence of adequate insurance cover stated as above. In an event such evidence is not provided, operating permission shall be denied.

GEN 1.4 ENTRY, TRANSIT AND DEPARTURE OF CARGO

1.4.1 KINGDOM OF BAHRAIN

1.4.1.1 REGULATIONS (INCLUDING CUSTOMS, AND REQUIREMENTS FOR ADVANCE NOTIFICATION AND APPLICATIONS FOR PERMISSION) CONCERNING ENTRY, TRANSIT AND DEPARTURE OF CARGO

Note: Provisions for facilitating entry and departure for search, rescue, salvage, investigation, repair or salvage in connection with lost or damaged aircraft are detailed in section GEN 3.6, Search and Rescue.

1.4.1.1.1 CUSTOMS REQUIREMENTS CONCERNING CARGO AND OTHER ARTICLES

1.4.1.1.1.1 IMPORTS

All air cargo shipments for Bahrain or in transit Bahrain are subject to customs clearance before release. For clearance, the appropriate Customs Declaration supported by required documents, notably genuine commercial supplier's invoice and Certificate of Origin must be presented.

1.4.1.1.1.2 TRANS - SHIPMENTS

Trans - shipment from one flight to another is permitted under customs supervision and must be recorded in the Export Manifest of departing flights.

1.4.1.1.1.3 EXPORTS

Air cargo shipments from Bahrain may be required to be cleared through customs on the appropriate customs declaration before shipment, especially when draw back of duty or deposit is claimed.

1.4.1.1.2 AGRICULTURAL QUARANTINE REQUIREMENTS

1.4.1.1.2.1 ARRIVAL

Advance permits are required for the importation of plants, plant parts, seeds and organic fertilizers. Advance permits are also required for the importation of live animals to Kingdom of Bahrain.

Details are available on application to the Ministry of Municipalities and Agriculture Affairs, Farmer's Services Directorate at the address shown on **GEN 1.1**.

1.4.1.1.2.2 TRANSIT

See **GEN 1.4.1.1.2.1**

1.4.1.1.2.3 DEPARTURE

See **GEN 1.4.1.1.2.1**

1.4.1.1.3 SAFE TRANSPORT OF DANGEROUS GOODS BY AIR

1.4.1.1.3.1 General

1.4.1.1.3.1.1 The Kingdom of Bahrain legislation requires that the transportation of all classes of dangerous goods is done in accordance with instructions contained in the Technical instructions for the safe Transport of Dangerous Goods by Air, ICAO Doc 9284 - AN / 905 and CAA Publication CAP 02.

1.4.1.1.3.1.2 The Kingdom of Bahrain legislation expressly forbids the transport of the following items by aircraft, except with the prior permission from Civil Aviation Affairs and in accordance with the conditions mentioned in this permission:

- a) Weapons and munitions
- b) Explosives, unless required on board the aircraft for its operation, or for signaling
- c) Poisonous Gases
- d) Germs
- e) Radioactive material, radioisotopes and similar substances
- f) Any other prohibited item as determined by the competent authority

1.4.1.1.3.1.3 An Operator who intends to transport dangerous goods by air, is required to apply and be approved in accordance with CAA publication CAP 02.

1.4.1.1.3.1.4 In the event of an accident / incident involving dangerous goods, the operator is required to adhere to the reporting procedures

in accordance with CAA publication CAP 02.

1.4.1.1.3.2 Overflying **BAHRAIN FIR / BAHRAIN UIR**

An Operator desirous to carry dangerous goods and applying for permission to overfly the BAHRAIN FIR / BAHRAIN UIR, must ensure that all dangerous goods have been packed, marked, labelled and handled in accordance with ICAO Annex 18 - Safe Transport of Dangerous Goods by Air, and the requirements of ICAO Technical Instructions Doc, 9284 - AN / 905, and must make an undertaking to CAA to this effect. This undertaking must be made at the time of providing notification of over flight / applying for the required permission (**GEN 1.2** refers).

1.4.1.1.3.3 **Transportation of Arms, Ammunition and all Classes of Explosives**

1.4.1.1.3.3.1 Furthermore, the transportation of arms, ammunition and all classes of explosives from / to / through Bahrain requires prior permission to be obtained from the Ministry of the Interior (MOI) and Civil Aviation Affairs (CAA) of the Kingdom of Bahrain.

1.4.1.1.3.3.2 Applications are required to be made at least seven working days in advance of the proposed date of transportation to an appropriate office of the Ministry of Interior (MOI):

(a) Transportation To / From Bahrain

(Form: AT / ARL / F002 a)

Ministry of Interior
Public Security Headquarters
Kingdom of Bahrain
TEL: +973 17272111
Telefax:+973 17270463
Telex: 9572 BN

(b) Transit / Transshipment at Bahrain

(Form: AT / ARL / F 002 b)

Ministry of Interior
Airport Directorate
Bahrain International Airport
Kingdom of Bahrain
TEL: +973 17321604 / +973 17321605
Telefax:+973 17332718

1.4.1.1.3.3.3 On receipt of "no objection" from MOI, the application is required to be forwarded to CAA, at least three working days prior to the proposed date of transportation for final approval:

Head of Aircraft Registration and Licensing
Air Transport Directorate
Civil Aviation Affairs
P.O. Box 586
Kingdom of Bahrain
TEL: +973 17321006
Telefax:+973 17321061
Telex: 9186 AIRCIV BN

GEN 1.5 AIRCRAFT INSTRUMENTS, EQUIPMENT AND FLIGHT DOCUMENTS**1.5.1 GENERAL****1.5.1.1 CARRIAGE OF RADIO AND RADAR EQUIPMENT**

1.5.1.1.1 To assist in the expeditious of air traffic throughout the BAHRAIN FIR / BAHRAIN UIR by the fullest use of the Navigation Aids provided for this purpose, the appropriate authorities of state providing Approach and / or Area Control Services have agreed to the requirements shown in **GEN 1.5.1.3** and **GEN 1.5.1.4** below for the carriage of Radio and Radar equipment.

1.5.1.1.2 Carriage of equipment listed under Paragraphs **GEN 1.5.1.3.1**, **GEN 1.5.1.3.2** and **GEN 1.5.1.4.1** is mandatory.

1.5.1.2 CARRIAGE COMMUNICATIONS, NAVIGATION AND APPROACH AID EQUIPMENT

The requirements applicable to all aircraft flying in the BAHRAIN FIR / BAHRAIN UIR and those particular to aircraft flying for the purpose of public transport are tabulated below. No general exemption from these requirements will be granted, but in very special circumstances relaxation of the requirements for a single flight may be approved by the Bahrain Air Traffic Control Centre or by the appropriate Approach Control Unit.

1.5.1.3 COMMUNICATION, NAVIGATION AND APPROACH EQUIPMENT REQUIRED**1.5.1.3.1 Flight under IFR in Controlled Airspace up to FL 150****COMMUNICATIONS EQUIPMENT**

VHF RTF with appropriate frequencies available

NAVIGATION EQUIPMENT

- a) in Control Areas and Control Zones VOR Receiver and automatic D / F and receiver for 75 MHZ Beacons
- b) in BAHRAIN CTA and Terminal Manoeuvring Areas, in addition to (a) above, DME

APPROACH AID EQUIPMENT

For landing at certain aerodromes within Control Zones an Approach Aid, e.g. ILS

Exception

Gliders, helicopters and light aircraft of 2500 KG MAUW or less, and special VFR flights, are exempt from the Navigation Equipment requirements.

1.5.1.3.2 Flight in Controlled Airspace above FL 150

In addition to **GEN 1.5.1.3.1**, DME

1.5.1.3.3 Public Transport Aircraft flying under IFR

Equipment as in **GEN 1.5.1.3.1** and **GEN 1.5.1.3.2**

1.5.1.3.4 Public Transport Aircraft flying under VFR

Sufficient equipment to maintain two - way communication with appropriate ATS units and also to navigate to the Flight Plan and ATC instructions.

Note: See also **GEN 3.4** with reference to the continuous guarding of emergency frequencies.

1.5.1.4 CARRIAGE OF SSR TRANSPONDERS

1.5.1.4.1 The requirements for the carriage of radar equipment in the BAHRAIN FIR / BAHRAIN UIR are as follows:

All TFC WI **OBBB FIR** / UIR:

Mode A - 4096 Codes and Mode C

1.5.1.4.2 Exception for carrying Mode C

Gliders

Helicopters below 1000 FT

1.5.1.4.3 Exemptions

The grant of exemptions from meeting the above requirements for the carriage of SSR transponder will only be considered in exceptional circumstances, and for limited periods. Applicants for exemption should submit full details of their inability to meet the requirements to:

Undersecretary for Civil Aviation
P.O. Box 586
Kingdom of Bahrain
Telefax: +973 17339066
AFS: OBBIYAYX

1.5.1.5 CARRIAGE OF AIRBORNE COLLISION AVOIDANCE SYSTEM - ACAS II

1.5.1.5.1 All fixed - wing turbine - engine aircraft having maximum take - off mass in excess of 5700 KG or approved passenger seating configuration of more than 19, will be required to be equipped with ACAS II.

1.5.1.5.2 Aircraft that failed to install ACAS II shall not be permitted to operate within BAHRAIN FIR / BAHRAIN UIR.

1.5.1.5.3 All aircraft fitted with ACAS II equipment, shall be fitted with software version 7.1 with mode S transponder compliant with Annex 10, Volume IV within the OBBS EFF 1st Jan 2017.

1.5.1.6 AUTHORIZATION FOR FLIGHT IN RVSM AIRSPACE

1.5.1.6.1 Aircraft intending flight in airspace where RVSM rules are applied are required to carry specific approval for RVSM operations from their State of Registry.

1.5.1.6.2 State aircraft are exempt from the requirement to carry RVSM documentation.

Note: In these cases 2000 FT vertical separation shall be applied. However, priority for allocation of levels will be in accordance with the criteria of making the best use of available airspace.

1.5.2 NAVIGATION EQUIPMENT FAILURE PROCEDURES

1.5.2.1 If part of an aircraft's radio navigation equipment fails, but two-way communication can still be maintained with ATC, the pilot must inform ATC of the failure and report his altitude and approximate position. ATC may at its discretion authorize the pilot to continue his flight in or into controlled airspace. When radar is available it may, subject to workload, be used to provide navigational assistance to the pilot.

1.5.2.2 If no authorization to proceed is given by ATC the pilot should leave or avoid controlled airspace and areas of dense traffic, and either:

- a) Go to an area in which he can continue his flight in VMC, or
- b) Select a suitable area in which to descend through cloud, fly visually to a suitable aerodrome and land as soon as practicable.

Note: Before doing so, however, he should consult ATC who may be able to give him instructions or advice. He should also take into consideration the latest meteorological information and terrain clearance.

GEN 1.6 SUMMARY OF NATIONAL REGULATIONS AND INTERNATIONAL AGREEMENTS / CONVENTIONS

1.6.1. The following is a list of Civil Aviation Legislation, Air Navigation Regulation etc. in force in certain areas of the BAHRAIN FIR / BAHRAIN UIR. They are available from:

Head of Aviation Safety
Civil Aviation Affairs
P.O. Box 586
Kingdom of Bahrain

		Reference NO.
(a)	Civil Aviation Law No: 14 / 2013	CAA Law
(b)	Air Navigation Technical Regulations	ANTR
(c)	Safe Transport of Dangerous Goods by Air	(PO1/01)
(d)	Procedures for Aircraft Accident & Incident Investigation	(PO1/02)
(e)	Procedures for ATC Incident Reporting	(PO1/03)
(f)	The Mandatory Occurrence Reporting Scheme for Bahrain Registered Aircraft	(PO1/05)
(g)	Air Operators Certificate	(PO1/06)
(h)	The Completion of Application Forms for the Grant, Renewal or Variation of an Air Operators Certificate	(PO1/07)
(i)	Maintenance Engineer Licensing	(PO1/08)
(j)	Flight Crew Licensing	(PO1/09)
(k)	Designated Examiner : Flight Crew	(PO1/10)
(l)	Procedures for Air Ambulance Operations and Emergency Medical Services	(PO1/12)

Summary of the procedure for issuance / Validation of Licenses (Refer P01/79) in **GEN 1.6.1** above:

The licenses issued by ICAO contracting state may be recognized by the Kingdom of Bahrain provided that the following are adhered to:

- A license is issued by a contracting state to the convention on International Civil Aviation, in accordance with Annex 1 to the convention, and is valid at the time of application;
- The training organization and syllabus meet Bahrain CAA requirements;
- The applicant is employed by a Bahrain registered operator; and
- The applicant successfully passes an examination on Bahrain aviation law and regulations, conducted by Bahrain CAA.

1.6.2 International agreements / conventions: Kingdom of Bahrain

Convention on International Civil Aviation (The Chicago Convention)

Convention for the Unification of Certain Rules Relating to International Carriage by Air (The Warsaw Convention)

International Air Services Transit Agreement

Convention on offences and certain Other Acts Committed on Board Aircraft (The Tokyo Convention)

Convention for the Suppression of Unlawful Seizure of Aircraft (The Hague Convention)

Convention for the Suppression of Unlawful Acts against the Safety of Civil Aviation (The Montreal Convention)

Convention on the Privileges and Immunities of specialized Agencies (United Nations)

Convention on the Marking of plastic Explosives for the Purpose of Detection

Convention on Damage Caused by Foreign Aircraft to Third Parties on surface (Rome, 7 October 1952) and protocol to amend the same (Montreal, 23 September 1978)

Convention for the Unification of Certain Rules for International Carriage by Air (Montreal, 28 May 1999)

INTENTIONALLY BLANK

GEN 1.7 DIFFERENCES FROM ICAO STANDARDS, RECOMMENDED PRACTICES AND PROCEDURES**GENERAL**

The rules of the air and air traffic procedures applicable to air traffic within the BAHRAIN FIR / BAHRAIN UIR conform with Annexes 2 and 11 to the Convention on International Civil Aviation, the Procedures for Air Navigation Services and the Regional Supplementary Procedures applicable to the MID / SIA Region, except in the cases indicated hereunder. Any differences which are attributable to the Bahrain ATC are registered with the International Civil Aviation Organization (ICAO).

With reference to Annex 2 Chapter 4 para. 4.3, VFR flights are permitted between the hours of sunset and sunrise in CLASS C, D and CLASS G airspace.

Aircraft operating off airways are required to send position reports as soon as practicable after the first half - hour of flight and at hourly intervals thereafter. As the BAHRAIN FIR and BAHRAIN UIR are considered to be areas over which Search and Rescue operations may be difficult, aircraft must transmit at least one signal in the interval between position reports.

ANNEX 1 PERSONNEL LICENSING (11th Edition JULY 2011):

***Note:** On request, the Kingdom of Bahrain will accept international air services / commercial operations by pilots of Contracting States beyond their 60th birthday up to the age stipulated by their respective states of Registry, which has filed a difference with ICAO, to a maximum of 65 years on the condition that the other pilot is below the age of 60 years.*

ANNEX 2 - RULES OF THE AIR (10th Edition JULY 2005):

Appendix 3

A modified table of cruising levels applies; see **ENR 1.7**

PROCEDURES FOR NAVIGATION SERVICES: AIR TRAFFIC MANAGEMENT SERVICES. (DOC 4444 - ATM / 501)**Part II 8.4****REPETITIVE FLIGHT PLANS / FLIGHT SCHEDULE DATA LISTS**

Pending full implementation of the RPL concept, RPLs are transmitted on the AFTN as if they were filed Flight Plans.

(I) Operators are required to submit advance details of their Season Scheduled Services (or any changes thereto) operating within the BAHRAIN FIR / BAHRAIN UIR, so as to the address shown below at least 14 days in advance of the effective date (s) in the format shown in the Repetitive Plan Listing Form :

THE FLIGHT DATA PROCESSING UNIT (FDPU)

P.O. Box 586 (AIS), KINGDOM OF BAHRAIN

FAX: + 973 17323876

TEL: + 973 17321084 / 17321181

***Note:** The submission of such details to Air Traffic Services does not constitute a request for approval of flight schedules.*

(II) This Date is required to be presented, on a separate sheet for each 12 hours UTC of each day, in the format shown in Repetitive Plan Listing Form.

***Note:** There is a requirement to indicate in Column Q for all flights the Entry point Designator for BAHRAIN FIR / BAHRAIN UIR with EST (UTC).*

(III) FLIGHT PLANS

(III - 1) Scheduled flights operating wholly within BAHRAIN FIR / BAHRAIN UIR.

(III - 2) It is not necessary to file INTRA - FIR Flight plans provided the seasonal schedules have been received and processed by the FDPU.

(IV) SCHEDULED FLIGHTS DEPARTING AIRFIELDS IN THE FIR AND ENTERING OTHER FIR / UIR

(IV -1) Standard Flight Plans for flights leaving the FIR / UIR must be filed with the ATC Unit at the aerodrome of departure, or

(IV - 2) Alternatively, by direct arrangement between the operator and the local ATC Unit involved, a standard ICAO Flight plan may be stored at the aerodrome of departure and activated by that unit at 0001 UTC on the day of operation.

(v) CHANGES TO FLIGHT DETAILS

(V - 1) Permanent Changes

(V - 2) Changes of a permanent nature to any of the details previously supplied (under 1.4.1.1 or 1.4.2.2.2) require that complete details must be advised, both to the FDPU at Bahrain and to any other aerodrome concerned within the FIR, either by a completely new replacement plan, or by clear "insert / delete" editing instructions.

(VI) **TEMPORARY CHANGES**

(VI 1) **Extra flights** require submission of both:

- a) a standard Flight Plan, and
- b) Flight date details to Bahrain FDPU

(VI - 2) **Replacement flights**, (i.e. Flights with temporary changes to details which have been submitted under 1.4.1.1 or 1.4.2.2.2) require:

(a) A Standard Flight plan clearly annotated in ITEM 12, Replacement of Scheduled Flight (c / s)... of. (date);

Note: *Flight Schedule Date Lists are required by ATSUs to prepare Air Traffic Control Date Systems in advance, thus reducing the possibility of traffic delay resulting from work - load in peak periods. Timely provision of Scheduled Flight Data, preferably more than the prescribed 14 days in advance, is therefore in the best interests of operators of scheduled air transport.*

(VII) **AFTN ADDRESSES**

(VII - 1) All Flight Plans and Departure messages for flights operating through or within the BAHRAIN FIR / BAHRAIN UIR must include address **OB BBZQZX**.

(VII - 2) All aircraft operators intending to use BAHRAIN INTERNATIONAL airport as a departure aerodrome must include the address **OB BIZPZX** in their flight plan.

(VII - 3) New AFTN addresses have been installed at BAHRAIN / SAKHIR AIRBASE for the purpose of flight planning and other aviation related issues in the following form: **OBKHZTZX** for Control Tower, **OBKHZPZX** for AIS / COMMS and **OBKHYFYX** for Service Address.

(VII - 4) A new eight - letter sequence AFTN address **OB BINEMX** is established for the purpose of Nuclear Emergency Message (NEM).

(VIII) **FLIGHT PLAN FORM**

(VIII - 1) The Flight Plan Form must be completed according to the instructions contained in DOC 4444 - ATM / 501, Appendix 2.

(VIII - 2) The following options are REQUIRED by the ATS authority for all flights operating within the BAHRAIN FIR / BAHRAIN UIR:

(VIII - 3) **Flight plan ITEM 8**

The second field letter denoting the TYPE OF FLIGHT.

(VIII 4) **Flight Plan ITEM 18**

The indicator 'EET / ' followed by FIR / UIR boundary designators and accumulated elapsed times as follows:

- a) Flights entering the BAHRAIN FIR / BAHRAIN UIR: The location indicator for the BAHRAIN FIR / BAHRAIN UIR together with the accumulated estimated elapsed time since departure (e.g. EET / OB BB0345)
- b) Flights departing from within the BAHRAIN FIR: All boundary designators, together with the corresponding estimated elapsed times to those points. (e.g. for a flight from OBBI to EGLL, EET / OEJD0005 OJAC0125 OSTT0145 LCCC02010 LGGG0245 LTBB0300 LGGG0305 LYBA0345 LYZB0420 LOVV0540 EDDU0510 EBUR0545 EHAA0600 EGTT0615)
- c) All ACFT using BAHRAIN FIR / BAHRAIN UIR are reminded to strictly adhere to the requirements of including their relevant ACFT registration markings in item 18 of the flight plan, failure to do so will result in an anticipated delay.

(VIII - 5) **Flight Plan ITEM 18**

The indicator 'SEL/ ' followed by the SELCAL code.

(VIII - 6) **Flight plan ITEM 19**

To be completed in full.

PROCEDURES FOR NAVIGATION SERVICES: AIR TRAFFIC MANAGEMENT (DOC 4444 - ATM / 501)

Reference: Chapter 5 GENERAL PROVISIONS FOR THE SEPARATION OF CONTROLLED TRAFFIC

Difference:

1.1 No VMC climbs or descents will be permitted to aircraft operating within controlled airspace of the BAHRAIN FIR / BAHRAIN UIR while such aircraft are operating under Instrument Flight Rules.

Regional Supplementary Procedures (Doc 7030 / 4)

The Supplementary Procedures in force, directly applicable to aircraft is given in their entirety. Differences are printed in heavy face italic type.

Doc 7030 part 1

1.1 Visual Flight Rules (VFR)

(Annex 2 - 4.6)

VFR flights to be operated within a control zone established at an aerodrome serving International Flights and in specified portions of the associated terminal control area shall:

1. have two - way radio communications;
2. obtain clearance from the appropriate air traffic control unit; and
3. report positions as required.

Note: The phrase "specified portions of the associated terminal control area" is intended to signify at least those portions of the TMA used by International IFR Flights in association with approach, holding, departure and noise abatement procedures.

1.2.1.1 Instrument Flight Rules (IFR)

(Annex 2 - 2.2 and chapter 5)

Flights shall be conducted in accordance with the Instrument Flight Rules (even when not operating in instrument meteorological conditions) when operated:

1. more than 100 NM seaward from the shoreline within controlled airspace; or
2. at or above FL 150.

3.0 A / G communications and in - flight Reports

(PANS ATM / 501 Chapter 4, 4 - 11)

All aircraft on VFR flights, and aircraft on IFR flights outside controlled airspace, shall maintain a watch on a radio station furnishing communications for the unit providing a flight information service in the flight information region and file reports with that station including information as to their position unless otherwise authorized by the state overflown.

3.4.1.2 The aircraft call sign / identification shall be transmitted immediately before or after the word "position".

3.4.1.3 The position of the aircraft shall be transmitted in reference to a reporting point name, name - code designator or, if not named:

1. For flights operating in a predominantly east - west direction:
 - a) latitude in degrees and minutes, and
 - b) longitude in degrees only
2. For flights operating in a predominantly north - south direction:
 - a) latitude in degrees only; and
 - b) longitude in degrees and minutes

3.4.1.4 The time at which the aircraft is over the reporting point shall be transmitted in four digits, giving both the hour and the minutes.

3.4.1.5 The altitude / flight level of the aircraft shall be included in the position report.

3.4.2.1 Next position and time shall normally be expressed as the reporting point name, name - code designator or latitude and longitude as indicated in 3.4.1.3.

3.4.2.2 Estimated time over the next position shall be expressed in four digits.

3.4.3.1 Ensuing position information shall include the name, name - code designator or coordinates of the next succeeding reporting point, whether compulsory or not.

4.0 Special Procedures for in - flight contingencies

General Procedures

The following general procedures apply to both subsonic and supersonic aircraft.

4.2.1 If an aircraft is unable to continue flight in accordance with its Air Traffic Control Clearance, a revised Clearance shall be obtained at the earliest possible time and, in the meantime, the aircraft shall broadcast position (including ATS route designator or the track code, as appropriate) and intentions, on frequency 121.500 MHZ at suitable intervals until Air Traffic Control Clearance is received.

12.1.1 Alerting and Search and Rescue Services - Routes and equipment of Private Aircraft

(Annex 6 - Part II - 6.3 and 6.4):

General Aviation aircraft operating over designated areas, land or sea, where search and rescue operations would be difficult, should:

1. carry appropriate survival equipment
2. follow the routes or specified procedures if not equipped with two - way radio except that under special circumstances, the appropriate authority may grant specific exemptions from this requirement.

12.2 Alerting Services

(PANS ATM / 501 Chapter 9 & Chapter 10, 10 - 2)

The procedures for "Alerting Service" detailed in the PANS RAC, Part VI, 2, are applicable to all flights except those conducted wholly in the vicinity of an aerodrome when exempted by an appropriate air traffic control unit.

Doc 7030 / 4, Part 3

1.1 Aircraft Observations and Reports

(Annex 3 - Chapter 5)

Aircraft within the BAHRAIN FIR / BAHRAIN UIR shall make and record routine observations at the ATS / MET reporting points indicated in the Regional Plan.

Regional Supplementary Procedures

Doc 7030 / 4 to Doc 7030 / 5

The Supplementary procedures in force are given in their entirety; differences are shown in **bold**.

GEN 2. TABLES AND CODES

GEN 2.1 MEASURING SYSTEM, AIRCRAFT MARKINGS, HOLIDAYS

2.1.1 UNITS OF MEASUREMENT

The following table of units of measurement will be used by aeronautical stations within BAHRAIN FIR / BAHRAIN UIR for air and ground operations.

FOR MEASUREMENT OF	UNITS USED
Distance used in navigation, position reporting, etc. Generally in excess of 2 nautical miles	Nautical Miles and tenth
Relatively short distances such as those relating to Aerodromes (e.g. runway lengths)	Metres
Altitudes, elevations and heights	Feet
Horizontal speed including wind speed	Knots or ratio MACH number
Vertical speed	Feet per minute
Wind direction for landing and taking off	Degrees Magnetic
Wind Direction except for landing and taking off	Degrees True
Visibility including runway visual range	Kilometres or metres
Altimeter setting	Hecto Pascals (HPA)
Temperature	Degrees Celsius
Weight	Metric tons or Kilograms
Time	Hours and Minutes, the day of 24 hours beginning at midnight UTC

2.1.2 TIME SYSTEM

General

Coordinated Universal Time (UTC) is used by air navigation services and in publication issued by the Aeronautical Information Service.

Reporting of time to the nearest minute, e.g. 12:40:35 is reported 1241.

When a "Date - Time Group" is required, two figures are used for each of the following, in this order; YEAR - MONTH - DAY - HOUR - MINUTE for example, twenty seven minutes past midnight on the third of December 1995 is down as "9512030027"

Local time in the Kingdom of Bahrain is UTC plus 3 hours.

2.1.3 HORIZONTAL REFERENCE SYSTEM

2.1.3.1 Name / designation of the reference system

All public geographical coordinates indicating latitude and longitude are expressed in terms of the World Geodetic system - 1984 (WGS - 84) geodetic reference datum except where indicated that the International 1909 spheroid is still extant.

2.1.3.2 Identification and parameters of the projection

To be developed.

2.1.3.3 Identification of the ellipsoid used

To be developed.

2.1.3.4 Identification of the datum used

To be developed.

2.1.3.5 **Area of application**

Area of application for the published geographical coordinates coincides with the area of responsibility of the Aeronautical Information Service, as well as the airspace over the high seas encompassed by the BAHRAIN FIR / BAHRAIN UIR in accordance with the regional air navigation agreement.

2.1.3.6 **Use of asterisk to identify published geographical co - ordinates**

An asterisk (*) will be used to identify those published geographical co - ordinates which have been transformed into WGS - 84 coordinates but whose accuracy of original field work does not meet the requirements in Annex 11, Chapter 2 and Annex 14, Volumes I and II, Chapter 2. Specifications for determination and reporting of WGS - 84 coordinates are given in Annex 11, Chapter 2 and Annex 14, Volume I and II, Chapter 2.

2.1.4 **AIRCRAFT NATIONALITY AND REGISTRATION MARKS**

The nationality mark for aircraft registered in the Kingdom of Bahrain is A 9 C (Alfa Nine Charlie).

2.1.5 **PUBLIC HOLIDAYS**

The following Public Holidays are fixed and applicable as indicated. Airport and ATC Facilities are unaffected. Additional Public Holidays that fall in accordance with the Islamic Calendar are published as an AIC.

HOLIDAY	DATE	DURATION OF HOLIDAY DAYS
GREGORIAN NEW YEAR	1 JAN	1
BAHRAIN LABOUR DAY	1 MAY	1
BAHRAIN NATIONAL DAY	16 DEC	2

GEN 2.2 ABBREVIATIONS USED IN AIS PUBLICATIONS

2.2.1. Abbreviations listed in DOC 8400, "ICAO Abbreviations and Codes", are used in the AIP Bahrain FIR, and in NOTAM.

Additionally, the following abbreviations may be used:

A	
ACAS	Airborne Collision Avoidance System
ACRV	Aerodrome Crash Rescue Vehicle
A.D.	Anno Domini (Gregorian Year)
AD	Aerodrome
AED	UAE Dirhams
AGNIS	Aircraft Guidance Nose - in System
A.H.	Anno Hejir, (Muslim Year)
AL	Amendment List
APT	Airport
Ar	Arabic
ARAMCO	Arabian American Oil Company
AVTUR	Aviation Jet Fuel
B	
BD	Bahrain Dinars
C	
CAA	Civil Aviation Affairs
CWY	Clearway

UAE	United Arab Emirates

Additional abbreviations used:

O / R On request

W / V Wind Velocity

2.2.2. When other abbreviations are used specific to a particular subject, a separate list is provided in the appropriate section of the AIP.

GEN 2.3 CHART SYMBOLS

RADIO FACILITIES		AERODROMES	
			Civil
			Civil international
			Private
			Joint civil and military (Intl.)
			Military
VOR/DME		AIR TRAFFIC SERVICES	
VORTAC			CTR or CTA boundary
Basic radio navigation aid symbol			Significant point (not a reporting point)
Radio marker beacon			Flight information region (FIR)
Non directional beacon NDB			Airway centrelines
			Sector
HYDROGRAPHY			Distance (NM) Route designator Minimum cruising level
Coast line			Magnetic track (VAR 2°E)
CULTURE			Upper limit
City or large town			Lower limit
Railroad (single track)			Compulsory reporting point
Telegraph or telephone line			Compulsory R/PT below FL145
Boundaries (international)			Non compulsory reporting point
Fence			Met reporting point
Road			On request fly-by WPT
VISUAL AIDS			Compulsory fly-by WPT
Marine lights			On request flyover WPT
Aeronautical ground light			Compulsory flyover WPT
MISCELLANEOUS			By Pass Point
Prominent transmission line			Holding pattern
SYMBOLS FOR AERODROME CHARTS			Area minimum altitude (minimum clearance of 1000ft above all obstacles in the quadrangle)
Hard surface runway			Change over point (COP)
Unpaved runway			Aerodrome traffic zone Upper limit Lower limit
Taxiway and parking area			
Aerodrome reference point (ARP)			
Runway visual range (RVR)			
Wind direction indicator			
Landing direction indicator			
Obstruction light			
VOR check point and freq			
Buildings and hangers

GEN 2.6 CONVERSIONS OF UNIT OF MEASUREMENTS

Tables for conversions or alternately conversion formulae between:

2.6.1 Nautical miles to kilometres

Conversion tables for Nautical miles to Kilometres are based upon the following conversion factors:

1 NM = 1.852 KM

1 KM = 0.5400 NM

Nautical Miles to Kilometres		Kilometres to Nautical Miles	
NM	KM	KM	NM
1.0	1.85	1.0	.54
1.1	2.04	1.1	.59
1.2	2.22	1.2	.65
1.3	2.41	1.3	.70
1.4	2.59	1.4	.76
1.5	2.78	1.5	.81
1.6	2.96	1.6	.86
1.7	3.15	1.7	.92
1.8	3.33	1.8	.97
1.9	3.52	1.9	1.03
2.0	3.70	2.0	1.08
2.1	3.89	2.1	1.13
2.2	4.07	2.2	1.19
2.3	4.26	2.3	1.24
2.4	4.44	2.4	1.30
2.5	4.63	2.5	1.35
3.0	5.56	3.0	1.62
4.0	7.41	4.0	2.16
5.0	9.26	5.0	2.70
6.0	11.11	6.0	3.24
7.0	12.96	7.0	3.78
8.0	14.82	8.0	4.32
9.0	16.67	9.0	4.86
10.0	18.52	10.0	5.40
15.0	27.78	15.0	8.10
20.0	37.04	20.0	10.80

GEN 3. SERVICES**GEN 3.1 AERONAUTICAL INFORMATION MANAGEMENT****3.1.1 RESPONSIBLE SERVICE**

3.1.1.1 The Aeronautical Information Management which forms part of the Civil Aviation Affairs of the Kingdom of Bahrain, ensures the flow of information necessary for the safety, regularity and efficiency of international air navigation within the area of its responsibility indicated under **GEN 3.1.1.2** below. It consists of AIM Headquarters, International NOTAM Office (NOF) and AIM units established at aerodromes as listed under **GEN 3.1.5** below.

3.1.1.2 AIM Headquarters**AERONAUTICAL INFORMATION MANAGEMENT**

P.O. Box 586
Kingdom of Bahrain
TEL: +973 17321180 / 1 / 2
Telefax: +973 17323876
AFS: OBBBYNYX
e-mail: sdcc@mtt.gov.bh
Http: www.bahrainaims.com

NOTAM: OBZZNAXX

SNOWTAM: OBZZSNXX

3.1.2 AREA OF RESPONSIBILITY OF AIM

The Aeronautical Information Management is responsible for the collection and dissemination of information for the BAHRAIN FIR / BAHRAIN UIR.

3.1.3 AERONAUTICAL PUBLICATIONS

3.1.3.1 The aeronautical information is provided in the form of the Integrated Aeronautical Information Package consisting of the following elements:

- An electronic Aeronautical Information Publication (electronic AIP);
- An electronic Amendment Service to the electronic AIP (AIP AMDT);
- An electronic Supplement Service to the electronic AIP (AIP SUP);
- NOTAM, and Pre - Flight Information Bulletins (PIB);
- An electronic Aeronautical Information Circulars (AIC) Service; and
- Check lists and summaries

NOTAM and the related monthly checklists are issued via the Aeronautical Fixed Service (AFS) while PIB are made available at aerodrome AIM units. All other elements of the package are published on the internet.

3.1.3.2 Electronic Aeronautical Information Publication (electronic AIP)

The electronic AIP is the basic aviation document intended primarily to satisfy international requirements for the exchange of permanent aeronautical information and long duration temporary changes essential for air navigation.

The electronic AIP BAHRAIN FIR is available in HTML format. The HTML version and a PDF version derived therefrom is published on the internet, and can be found at <http://www.bahrainaims.com>. The HTML version is the primary method of publication of the electronic AIP BAHRAIN FIR.

Electronic AIP Bahrain FIR

This electronic AIP, issued in English only, is the basic aeronautical information document for the BAHRAIN FIR / BAHRAIN UIR, for use in international and domestic operations whether the flight is a commercial or a private one and contains lasting information essential to air navigation.

3.1.3.3 Amendment service to the electronic AIP (AIP AMDT)

Amendments to the electronic AIP (AIP AMDT) are published on the internet. Two types of electronic AIP AMDT are produced:

1. Electronic Regular AIP Amendments (AIP AMDT) are issued in accordance with the established regular interval (ref. **GEN 0.1**), and incorporate permanent changes into the electronic AIP at the indicated publication date;
2. Electronic AIRAC AIP Amendments (AIRAC AIP AMDT) are issued in accordance with the AIRAC system, identified by the acronym AIRAC, and incorporate operationally significant permanent changes into the electronic AIP at the indicated AIRAC effective date.

A brief description of the subjects affected by the amendment is given on the electronic AIP Amendment cover sheet.

Each electronic AIP amendment cover sheet includes references to the serial number of those elements, if any, of the Integrated Aeronautical Information Package which have been incorporated in the electronic AIP by the amendment and are consequently cancelled.

Each AIP AMDT and each AIRAC AIP AMDT will be allocated separate two digit serial numbers which are consecutive in line with the AIRAC cycle. This will be followed by a two digit number to denote the year of issue or validity, e.g. AIP AMDT 01 / 11; AIRAC AIP AMDT 01 / 11. This new system will supersede the old system (which used a continuous sequence of numbers).

For further details refer to the electronic AIP BAHRAIN FIR version on the internet and its Help section.

3.1.3.4 **Electronic Supplement Service to the electronic AIP (AIP SUP)**

Temporary changes of long duration (three months and longer) and information of short duration which consists of extensive text and / or graphics, supplementing the permanent information contained in the electronic AIP are published as electronic AIP Supplements (AIP SUP). Operationally significant temporary changes to the electronic AIP are published in accordance with the AIRAC system and its established effective dates and are identified clearly by the acronym AIRAC.

Electronic AIP Supplements are separated by information subject (General - GEN, En-route - ENR and Aerodromes - AD). In a similar manner to AIP AMDT, each Supplement (regular or AIRAC) is allocated a serial number which is consecutive and based on the calendar year, i. e. AIRAC AIP SUP 01 / 11.

Electronic AIP Supplements are kept in the AIP as long as all or some of their contents remain valid. The period of validity of information contained in the electronic AIP Supplement will normally be given in the supplement itself. Alternatively, NOTAM may be used to indicate changes to the period of validity or cancellation of the supplement.

The checklist of electronic AIP Supplements currently in force is issued additionally by the medium of the monthly printed plain language summary of NOTAM in force.

Electronic AIP Supplements are placed on the desktop of the electronic AIP as a separate subject item under the electronic AIP Tabulator "SUP". For further details refer to the electronic AIP BAHRAIN FIR version on the internet and its Help section.

3.1.3.5 **NOTAM and Pre - flight Information Bulletins (PIB)**

NOTAM contain the information concerning the establishment, condition or change in any aeronautical facility, service, procedure or hazard, the timely knowledge of which is essential for personnel concerned with flight operations. The text of each NOTAM contains the information in the order shown in the ICAO NOTAM Format and is composed of the significations / uniform abbreviated phraseology assigned to the ICAO NOTAM Code complemented by ICAO abbreviations, indicators, designators, call signs, frequencies, figures and plain language. NOTAM are originated and issued for BAHRAIN FIR / BAHRAIN UIR and are distributed in one series which is identified by the letter A.

Series A

All NOTAM information for domestic and international use pertinent to flight within the BAHRAIN FIR / BAHRAIN UIR.

NOTAM S (SNOWTAM) contains information concerning snow, slush, ice or standing water associated with snow, slush and ice in the movement areas. The local climate precludes the issue of NOTAM S in the BAHRAIN FIR / BAHRAIN UIR.

Pre - flight Information Bulletins (PIB), which contain a recapitulation of current NOTAM and other information of urgent character to the operator / flight crews, are available at the Aerodrome AIS Units. The extent of the information contained in the PIB is indicated in subsection 5.

3.1.3.6 **Electronic Aeronautical Information Circulars (AIC)**

The electronic Aeronautical Information Circulars (AIC) contain information of long - term forecast of any major change in legislation, regulations procedures or facilities; purely explanatory or advisory nature liable to affect flight safety; and information or notification of an explanatory or advisory nature concerning technical, legislative or purely administrative matters. AICs are divided in accordance with subjects and their affects and are issued in one series (A).

Each electronic AIC is numbered consecutively on a calendar year basis. The year, indicated by two digits, is a part of serial number of the AIC, e.g. AIC 1 / 11. A checklist of AIC currently in force is issued as an AIC once a year.

Electronic AIC are placed on the desktop of the electronic AIP accordingly as a separate item under the eAIP Tabulator "AIC". For further details refer to the electronic AIP BAHRAIN FIR version on the internet and its Help section.

3.1.3.7 **Checklist of NOTAMS**

A checklist of NOTAM is issued monthly via AFS. This checklist contains all valid NOTAMS, latest AIP AMDT, latest AIP SUP and AIC.

3.1.3.8 **Summary of NOTAM**

Summary of NOTAM is published on the official website. It contains a plain language (in English) presentation of the valid NOTAM and information about the latest AIRAC AIP AMDT, AIC issued and checklist of AIP SUP.

3.1.3.9 Publication Sale

All publications can be obtained from the following official website in both HTML and PDF versions and is free of charge to all users.
www.bahrainaims.com

3.1.4 THE AIRAC SYSTEM

3.1.4.1 In order to control and regulate the flow of operationally significant changes requiring amendments to charts, route - manuals etc., such changes, whenever possible, will be issued on predetermined dates according to the AIRAC SYSTEM.

Whenever possible this type of information will be published as an AIRAC AIP AMDT / SUP. If an AIRAC AMDT / SUP cannot be produced due to lack of time on a predetermined date, a NIL AIRAC notification NOTAM will be issued one cycle before the effective date of the AIRAC concern.

3.1.4.2 The table overleaf indicates AIRAC effective dates for the coming years. AIRAC information will be issued so that the information will be received by user not later than 28 days, and major changes not later than 56 days, before the effective date.

At AIRAC effective dates, a Trigger NOTAM will be issued giving a brief description of the contents, effective date and cross reference number of the AIRAC AIP AMDT or AIRAC AIP SUP that will become effective on that particular date.

Schedule of AIRAC effective dates

	2014	2015	2016	2017	2018	2019
1	09-Jan	08-Jan	07-Jan	05-Jan	04-Jan	03-Jan

3.1.5.5 A self - briefing pre - flight information service is available at BAHRAIN INTERNATIONAL airport with the coverage indicated below:

3.1.5.5.1 BAHRAIN: Complete coverage as for BAHRAIN INTERNATIONAL NOTAM OFFICE. See GEN 3.1.5.1 to GEN 3.1.5.4.

3.1.5.6 **Pre - flight Information Bulletins (PFIBs)**

3.1.5.6.1 In addition to the self - briefing pre - flight information service, a comprehensive tailored pre - flight briefing is available to scheduled operators from BAHRAIN INTERNATIONAL airport. Application for service should be made to the Airport AIM / MET Briefing Office:

AIM / MET Briefing
P.O. Box 586

Kingdom of Bahrain
TEL: +973 17321181 / +973 17321182 and +973 17321178
Telefax: +973 17323876

3.1.5.6.2 Bahrain Integrated Aeronautical Information Package is available on: www.bahrainaims.com

3.1.5.7 Accuracy of Information

3.1.5.7.1 The AIP BAHRAIN FIR and associated NOTAM are compiled from the variety of sources. Except for Bahrain, all information is acquired from independent states and from commercial sources. The greatest care is exercised in the assembly and compilation of information for the AIP BAHRAIN FIR and associated NOTAM and they are considered to be as reliable as possible at the time of issue. Civil Affairs will not be held responsible, however, for the accuracy of the contents of the AIP BAHRAIN FIR or NOTAM or for any omissions therefrom, neither will Civil Aviation Affairs be responsible for the adequacy or receipt of NOTAM or AIP amendments.

3.1.5.7.2 Any errors or omissions discovered should be notified without delay to the AIM Department or to Civil Aviation Affairs.

3.1.5.7.3 To further enhance the quality of the services provided by AIM, Bahrain has implemented ISO 9001 : 2008 to AIM, should any comments or suggestions arise, please do not hesitate to mail or email us at the following address:

INTENTIONALLY BLANK

GEN 3.2 AERONAUTICAL CHARTS**3.2.1 RESPONSIBLE SERVICE**

Civil Aviation Affairs of Bahrain provides a wide range of aeronautical charts for use by all types of Bahrain Civil Aviation Affairs. The Aeronautical Information Service produces the charts which are part of the AIP. For addresses see **GEN 3.2.3** below.

The charts are produced in accordance with the provisions contained in the following ICAO documents: Annex 4 - Aeronautical Charts. Differences to these provisions are detailed in section **GEN 1.7**.

3.2.2 MAINTENANCE OF CHARTS

3.2.2.1 The aeronautical charts included in the AIP are kept up - to - date by amendments by AIP. Corrections to aeronautical charts not contained in the AIP are promulgated by AIP Amendments and are listed under **GEN 3.2.7** of this section. Information concerning the planning for or issuance of new maps and charts are notified by Aeronautical Information Circular.

3.2.2.2 Incorrect information detected on published charts are corrected by NOTAM if they are of operational significance.

3.2.3 PURCHASE ARRANGEMENTS

3.2.3.1 The charts contained in the AIP BAHRAIN FIR may be obtained from the:

Aeronautical Information Management
P.O. Box 586
Kingdom of Bahrain
TEL: +973 17321180 / +973 17321181 / +973 17321182
Telefax: +973 17323876
AFS: OBBBYNYX

The charts listed under **GEN 3.2.5** of this section may be obtained through the following accredited chart agents:

a) Edward Stanford Ltd.

12 - 14 Long Acre, London, WC 2 E 9 L P., UK

b) British Airways (Aerad) (S 464),

P.O. Box 10, Aerad House,

Heathrow Airport

Hounslow, Middlesex

TW 6 2 JA, UK

c) Airtour International Ltd.,

Elstree Aerodrome,

Elstree,

Herts, WD 6 3 AW, UK

d) British Light Aviation Centre,

Artillery Manisons,

Victoria Street,

London SW 1, UK

3.2.3.2 Civil Aviation Affairs, the Aeronautical Information Service and the sales agents have copies of the ICAO Catalogue (ICAO Doc 7101 - MAP / 565) wherein are listed all aeronautical charts or chart series produced by this and other countries, and known to be generally available to Civil Aviation.

3.2.4 AERONAUTICAL CHART SERIES AVAILABLE

3.2.4.1 The following series of aeronautical charts are acknowledged:

- a) World Aeronautical Chart - ICAO 1 : 1.000.000
- b) Plotting Chart - ICAO
- c) Aerodrome / Heliport Chart - ICAO
- d) Aerodrome Ground Movement Chart - ICAO

- e) Aircraft Parking / Docking Chart - ICAO
- f) Aerodrome Obstacle Chart - ICAO - Type A
- g) Aerodrome Obstacle Chart - ICAO - Type C
- h) Precision Approach Terrain Chart - ICAO
- i) En-route Chart - ICAO
- j) Area Chart - ICAO (departure, arrival and transit routes)
- k) Instrument Approach Chart - ICAO (for each runway and procedure type)
- l) Visual Approach Chart - ICAO

The charts currently available are listed under AD 2.24 of each aerodrome.

3.2.4.2 General description of each Series

a) World Aeronautical Chart ICAO 1 : 1.000.000

The World Aeronautical Chart ICAO 1 : 1.000.000 series is constructed on Lambert Conical Orthomorphic Projection up to 80° N and Polar Stereographic Projection between 80° N and 90° N with the scales matching at 80° N. The aeronautical data shown has been kept to a minimum, consistent with the use of the chart for visual air navigation. It includes a selection of aerodromes, significant obstacles, elements of the ATS system, prohibited, restricted and danger areas and radio navigation aids. The chart provides information to satisfy visual air navigation and is also used as a pre - flight planning chart.

b) Plotting Chart - ICAO

This series, covering the North Atlantic, Western Europe and North Africa is designed for in - flight long range navigation and is constructed on Mercator's projection with simple outline of land areas at a scale of 1 : 5.000.000. Aeronautical data consist of major international aerodromes, selected radio navigation aids, lattices of long range electronic aids to navigation, FIR, CTA, CTR, reporting points, etc. The chart is designed to provide a means of maintaining a continuous flight record of the aircraft position.

c) Aerodrome / Heliport Chart - ICAO

The Aerodrome / Heliport Chart - ICAO contains detailed Aerodrome / Heliport data to provide flight crew with information which will facilitate the ground movement of aircraft:

- a) from aircraft stand to the runway; and
- b) from the runway to the aircraft stand;

and helicopter movement:

- a) from the helicopter stand to the touchdown and lift - off area and to the final approach and take - off area;
- b) from the final approach and take - off area to the touchdown and lift - off area and to the helicopter stand;
- c) along helicopter ground and air taxiways; and
- d) along air transit routes;

It also provides essential operational information at the aerodrome / heliport.

d) Aerodrome Ground Movement Chart - ICAO

The Aerodrome Ground Movement Chart - ICAO is produced for those aerodromes where, due to congestion of information, details necessary for the ground movement of aircraft along the taxiways to and from the aircraft stands and the parking / docking of aircraft, cannot be shown with sufficient clarity on the Aerodrome / Heliport Chart - ICAO.

e) Aircraft Parking / Docking Chart - ICAO

This chart is produced for those aerodromes where, due to the complexity of the terminal facilities the information to facilitate the ground movement of aircraft between the taxiways and the aircraft stands and the parking / docking of aircraft cannot be shown with sufficient clarity on the Aerodrome / Heliport Chart - ICAO or on Aerodrome Ground Movement Chart - ICAO.

f) Aerodrome Obstacle Chart - ICAO, Type A (Operating Limitations)

This chart contains detailed information of obstacles in the take - off flight path areas of aerodromes. It is shown in plan and profile view. This obstacle information, in combination with an Obstacle Chart - ICAO, Type C provides the data necessary to enable an operator to comply with the operating limitations of Annex 6, Parts I and II, Chapter 5.

g) Aerodrome Obstacle Chart - ICAO, Type C

This chart contains obstacles data necessary to enable an operator to develop procedures to comply with operating limitations of Annex 6, Parts I and II, Chapter 5 with particular reference to information on obstacles that limit the maximum permissible take - off mass. This chart must provide certain obstacle data and topographical information covering a distance of 45 KM (24 NM) from the aerodrome reference point.

Appropriate topographical charts which are available for the area around the airports, if supplemented with "overprint" obstacle data and other significant aeronautical information, should be suitable for use as the topographic base for the AOC - ICAO, Type C. The chart is not produced if:

- a) The required obstacle data is published in the AIP; or
- b) No significant obstacles exist, and this fact is published in the AIP.

h) Precision Approach Terrain Chart - ICAO

Precision Approach Terrain Charts - ICAO provide detailed terrain profile information within a defined portion of the final approach so as to enable aircraft operating agencies to assess the effect of the terrain on decision height determination by the use of radio altimeters. This chart is produced for all precision approach runways Categories II and III.

i) En-route Chart - ICAO

This chart is produced for the entire BAHRAIN FIR / BAHRAIN UIR. The aeronautical data include all aerodromes, prohibited, restricted and danger areas and the air traffic services system in detail. The chart provides flight crews with information to facilitate navigation along ATS routes in compliance with air traffic services procedures.

j) Area Chart - ICAO

The Area Chart - ICAO is produced where the air traffic services routes or position reporting requirements are complex and cannot be shown on an En-route Chart - ICAO. It contains in more detail aerodromes, which affect terminal routings, prohibited, restricted and danger areas and the air traffic services system. This chart provides the flight crew with information to facilitate the following phases of instrument flight:

- a) the transition between the en-route phase and approach to an aerodrome;
- b) the transition between take - off / missed approach and en-route phase of flight; and
- c) flights through areas of complex ATS routes or airspace structure.

k) Instrument Approach Chart - ICAO

Instrument Approach Charts - ICAO are produced for all aerodromes used by civil aviation where instrument approach procedures have been established.

A separate Instrument Approach Chart - ICAO has been provided for each approach procedure.

The aeronautical data shown include information on aerodromes, prohibited restricted and danger areas, radio communication facilities and navigation aids, minimum sector altitude, procedure track portrayed in plan and profile view, aerodrome operating minima etc.

This chart provides flight crew with information which will enable them to perform an approved instrument approach procedure to the runway of intended landing including the missed approach procedure and where applicable, associated holding patterns.

l) Visual Approach Chart - ICAO

The Visual Approach Chart - ICAO is produced for aerodromes used by civil aviation where:

1. only limited navigation facilities are available;
2. radio communication facilities are not available; or
3. no adequate aeronautical charts of the aerodrome and its surroundings at 1 : 500.000 or greater scale are available; or
4. visual approach procedures have been established.

The aeronautical data shown, include information on aerodromes, obstacles, designated airspace, visual approach information, radio navigation aids and communication facilities as appropriate.

3.2.5 INDEX TO OPERATIONAL NAVIGATIONAL CHARTS ONC 1 : 1.000.000 and TACTICAL PILOTAGE CHARTS TPC 1 : 500.000

3.2.6 TOPOGRAPHICAL CHARTS

To supplement the aeronautical charts, a range of topographical charts is available from:

The Ministry of Housing
Survey Directorate
P.O. Box 5802
Kingdom of Bahrain
TEL: +973 17533000
Telefax: +973 17533795

3.2.7 CORRECTIONS TO CHARTS NOT CONTAINED IN THE AIP

NIL

GEN 3.3 AIR TRAFFIC SERVICES**3.3.1 RESPONSIBLE SERVICE**

The Air Traffic Services Department of the Bahrain Civil Aviation Affairs is the responsible authority for the provision of Air Traffic Services within the area indicated under **GEN 3.3.2** below.

Undersecretary for Civil Aviation
P.O. Box 586
Kingdom of Bahrain
TEL: +973 17321100
Telefax: +973 17339066
AFS: OBBBZGZX
SITA: BAHAPYF

The services are provided in accordance with the provision contained in the following ICAO documents:

Annex 2 Rules of the Air
Annex 11 Air Traffic Services
Doc 4444 Air Traffic Management (PANS - ATM)
Doc 8168 Procedures for Air Navigation Services / Aircraft Operation (PANS - OPS)
Doc 7030 Regional Supplementary Procedures

Differences from these provisions are detailed in sub - section **GEN 1.7**.

3.3.2 AREA OF RESPONSIBILITY

Air Traffic Services are provided for the entire territories, including territorial waters, and in the airspace over the high seas encompassed by the BAHRAIN FIR / BAHRAIN UIR.

3.3.3 TYPE OF SERVICES

The following types of services are provided:

Flight Information Service (FIS) and Alerting Service (ALRS)
Area Control (ACC); and
Radar

With the exception of services provided at military air bases, the following types of services are provided at aerodromes:

Aerodrome Control (TWR);
Approach Radar;
Aerodrome Flight Information Service (AFIS); and
Automatic Terminal Information Service (ATIS), at certain aerodromes

For military ATS within the Kingdom of Bahrain see **OBBS AD 2.17** and **OBKH AD 2.17**.

3.3.3.1 Air Traffic Services are provided in accordance with the standards specified in Annex 11 to the Convention on International Civil Aviation. Airspace is classified in accordance with Appendix 4 to Annex 11, and a description of the system with an indication of the utilization in the BAHRAIN FIR / BAHRAIN UIR is set out in **ENR 1.4**.

Air Traffic Control is exercised:

- a) In Class A Airspace which in the BAHRAIN UIR encompasses all Controlled Airspace at and above FL 150 and;
- b) In Class C Airspace which in the BAHRAIN FIR encompasses all Controlled Airspace below FL 150.

Note: *Controlled Airspace is a generic term which covers ATS Airspace Classes A, B, C, D & E as defined in Appendix 4 to Annex 11.*

3.3.3.2 Flight Information Service and Alerting Service within the Area of Responsibility outside the Control Zones, and Air Traffic Control service in airways within the Area of Responsibility are provided by one Centre (ACC Bahrain). Within Control Zones the Services are provided by the Approach Control Unit concerned.

The Taxis of each airway is constituted by a line connecting significant points identified as a rule by radio navigational facilities.

3.3.3.3 Air Traffic Control, Flight Information and Alerting Services are provided by:

- a) ACC Bahrain in the Bahrain CTA and along the airways, including those parts of the airways traversing Control Zones.
- b) The relevant Approach Control Unit and Aerodrome Control Unit, in co - ordination with Bahrain as necessary, for arriving and departing aircraft.

3.3.3.4 The description of the airspace designated for Air Traffic Services purposes is contained in several tables, all forming part of

ENR 3.

3.3.3.5 In general, the air traffic rules and procedures in force and the organization of Air Traffic Services are in conformity with ICAO Standards, Recommended Practices and Procedures. Differences between the National and International Rules and Procedures are given in **GEN 1.7**. The Regional Supplementary Procedures are given in full with an indication where there is a difference.

3.3.3.6 Prohibited, Restricted and Danger areas are established within BAHRAIN FIR / BAHRAIN UIR. These areas are shown in **ENR 5**. Activation of areas subject to Intermittent activity is notified in advance by NOTAM, given reference to the area only by its designation.

3.3.4 COORDINATION BETWEEN THE OPERATORS AND ATS

Coordination between the operator and Air Traffic Services is affected in accordance with Annex 11 and Doc 4444 (PANS - ATM).

Coordination for Special Use of Airspace

In order to ensure that activities potentially hazardous to civil aircraft are coordinated between Military users and ATC units and to:

1. Allow timely promulgation of information;
2. Minimize interference with normal civil aircraft operations;
3. Avoid hazards to civil aircraft;

The unit requesting special use of airspace shall submit a request to Bahrain ATC Head of ATC Operations for approval at least 10 days prior to the proposed operation. All requests shall include date and times of the request as well as the specific area requested, defined by Latitude and Longitude coordinates and altitude limits in terms of MSL.

Bahrain HATO contact details as follows:-

Head Air Traffic Operation
Air Navigation Directorate
Ministry of Transportation & Telecommunications
Kingdom of Bahrain
TEL: +973 17321158
Telefax: + 973 17329977
MOB: + 973 39522696
e-mail: a.ali@mtt.gov.bh

3.3.5 MINIMUM FLIGHT ALTITUDES

The minimum flight altitudes on the ATS routes as listed in **ENR 3** have been determined to ensure at least 300 M (1000 FT) vertical clearance above the highest obstacle within 5 NM from the edge of airways.

However, where the angular divergence of the navigational air signal in combination with the distance between the navigational aids could result in an aircraft being more than 5 NM (9 KM) on either side of the centre line, the 5 NM (9 KM) protection limit on each side of the centre line of the ATS route is increased by the extent to which the divergence is more than 5 NM (9 KM) from the centre line.

Note: The navigation performance accuracy necessary for operation on air routes within BAHRAIN UIR is expressed as RNAV type. RNAV type is containment value expressed as a distance in NM from the intended position within which flights would be for at least 95 per cent of the total flying time. For operation on the air routes in the BAHRAIN UIR, the required radio navigation specification (RNAV) is RNAV 5. RNAV 5 represents a navigation accuracy of plus or minus 9.26 KM (5 NM) on a per cent containment basis. RNAV 5 application in BAHRAIN UIR is detailed in **ENR 1.3.4**.

GEN 3.4 COMMUNICATION SERVICES**3.4.1 KINGDOM OF BAHRAIN****3.4.1.1 RESPONSIBLE SERVICE**

3.4.1.1.1 The telecommunications services in the BAHRAIN FIR / BAHRAIN UIR are not administered by a single authority but by different administrations or operating authorities, each responsible for the telecommunications stations under their control. Arrangements concerning these services, or any enquiries, suggestions or complaints regarding telecommunications services at individual stations, should be referred to the relevant administration or operating authority for the telecommunications stations concerned.

3.4.1.1.2 The authority responsible for the administration of telecommunications services at Bahrain is Civil Aviation Affairs.

Undersecretary for Civil Aviation
P.O. Box 586
Kingdom of Bahrain
TEL: +973 17321011
Telefax: +973 17339066
AFS: OBBIYAYX

The service is provided in accordance with the provisions contained in the following ICAO documents:

Annex 10 Aeronautical Telecommunications
Doc 8400 Procedures for Air Navigation Services - ICAO Abbreviations and Codes (PANS - ABC)
Doc 8585 Designator for Aircraft Operating Agencies, Aeronautical Authorities and Services
Doc 7030 Regional Supplementary Procedures
Doc 7910 Location Indicators

3.4.1.2 AREA OF RESPONSIBILITY

Communication services are provided for the entire BAHRAIN FIR / BAHRAIN UIR. Arrangements for such Services on a continuing basis should be made with the Head of Communications Civil Aviation Affairs, who is also responsible for the application of the regulations concerning the design, type and installations of aircraft radio stations. Responsibility for the day - to - day operation of these services is vested in Station Communication Officers located at each international aerodrome. Enquiries, suggestions or complaints regarding any telecommunication service should be referred to the relevant Station Communication Officer or to the Head of Communications, Civil Aviation Affairs, as appropriate.

The various authorities are in States within the BAHRAIN FIR / BAHRAIN UIR.

3.4.1.3 TYPES OF SERVICE**3.4.1.3.1 Radio Navigation Service**

The following types of radio aids to navigation are available:

Instrument Landing System (ILS)
VHF Omnidirectional Radio Range (VOR)
Distance Measuring Equipment (DME)

3.4.1.3.2 Mobile Service / Fixed Service**3.4.1.3.2.1 Mobile Service**

The aeronautical stations within the BAHRAIN FIR / BAHRAIN UIR maintain a continuous watch on their stated frequencies during the published hours of service unless otherwise notified.

3.4.1.3.2.1.1 An aircraft should normally communicate with the air - ground control station which exercises control in the area in which it is flying. Aircraft should maintain continuous watch on the appropriate frequency and should not cease watch, except for reasons of safety, without the authority of the control radio station,

3.4.1.3.2.1.2 During flight within the BAHRAIN FIR / BAHRAIN UIR, pilots must additionally guard one or both of the emergency frequencies 121.500 MHZ and 243.000 MHZ.

3.4.1.3.2.1.3 At stations within the BAHRAIN FIR / BAHRAIN UIR the language used in air - ground communications is English.

3.4.1.3.2.2 Fixed Service

At stations within the BAHRAIN FIR / BAHRAIN UIR messages to be transmitted over the Aeronautical Fixed Service are accepted only if:

- a) they satisfy the requirements of Annex 10, Volume 2, Chapter 3.3
- b) they are prepared in the form specified in Annex 10, and
- c) the text of an individual message does not exceed 1800 characters

General Aircraft Operating Agency messages are only accepted for transmission to countries which have agreed to accept Class "B" traffic.

3.4.1.3.2.3 Broadcast Service

Sub - Area Meteorological Broadcasts (VOLMET Radio - telephony Broadcasts) are available for the use of aircraft in flight. Full details are given in Section **GEN 3.5**.

3.4.1.3.2.3.1 Language used: English

3.4.1.3.2.3.2 Where detailed information can be obtained

Details of the various facilities available for the En - route traffic are to be found in the En - route Part. (**ENR 4**).

Details of the facilities available at the individual aerodrome are to be found in the relevant aerodrome (AD) section. In cases where a facility is serving both the En - route traffic and the Aerodromes, details are given in both the En - route Part and the Aerodrome section concerned.

The co - ordinates listed refer to the transmitting antennae.

3.4.1.4 REQUIREMENTS AND CONDITIONS

The requirements of the Directorate of Communication Services and the general conditions under which the communication services are available for international use, as well as the requirements for the carriage of radio equipment, are contained in the Air Navigation (Radio) Regulations of Bahrain. The list of the main provisions is briefly summarized below:

Article (12) Radio Equipment and its use in the Aircraft

Aircraft operating in the territory of the Kingdom of Bahrain shall not carry any radio equipment unless a license has been issued to the effect by the competent Authorities in the State of Registry. Such equipment shall be used only for air navigation purposes by the flight crew of the aircraft in accordance with the established rules.

3.4.2 Table Aeronautical Fixed Services - International Circuits

GEN 3.5 METEOROLOGICAL SERVICES

3.5.1 KINGDOM OF BAHRAIN

3.5.1.1 Responsible Service

The Meteorological Services for civil aviation at Bahrain are provided by the Bahrain Meteorological Service.

Bahrain Meteorological Service
Civil Aviation Affairs
Bahrain International Airport
P.O. Box 586
Kingdom of Bahrain
TEL: +973 17321178 (MET Briefing), +973 17323073 (Forecaster)
Telefax: +973 17320630
AFS: OBBIYMYX

The service is provided with the provisions contained in the following ICAO documents:

Annex 3: Meteorological Service for International Air Navigation
Annex 15: Aeronautical Information Service
Doc 8126: Aeronautical Information Services Manual
Doc 7030: Regional Supplementary Procedures
Doc 8700: Air Navigation Plan, MID / ASIA
Doc 9377: Co-ordination between ATS and the Meteorological Services

Differences from these provisions are detailed in Section **GEN 1.7**.

3.5.1.2 Area of Responsibility

Meteorological Watch Office for the BAHRAIN FIR / BAHRAIN UIR.

Air routes from Bahrain to:	North America
	Europe
	South Africa
	The Far East

3.5.1.3 Observing Systems and Operation Procedures

3.5.1.3.1 Surface wind is measured by ultrasonic wind sensor located approximately 350 M WSW of THR RWY 30L and at RWY 12R. Wind indicators are located in the meteorological units of Briefing, Observing and Operations and in the appropriate Air Traffic Services Units.

Cloud height is estimated. However Vaisala Ceilometer cloud measurements are also available near the RWY 30L.

Temperature and humidity readings are taken from instruments located at a site some 250 M from the RWY, near to the THR RWY 30L.

Vertical / horizontal wind - shear warnings are issued.

Slant visual range observations are not made.

Visibility is estimated except for IRVR as follows.

3.5.1.3.2 IRVR REPORTING PROCEDURES

3.5.1.3.2.1 IRVR reporting is initiated when:

- The regular meteorological report shows visibility to be 2000 M or less;
- The IRVR value is observed to be 2000 M or less;
- Whenever shallow fog is reported, and during periods for which it is forecast.

Note: In METAR, only the touchdown and stop end values are given.

3.5.1.3.2.2 IRVR values will be passed to all aircraft at the beginning of each approach for landing and thereafter, any significant change to the IRVR is passed until the aircraft has landed. A significant change is defined as a change in value of one increment or more. IRVR information will also be provided to aircraft prior to take off.

3.5.1.3.2.3 The IRVR is measured by forward scattering visibility sensor and the system consists of three transmission meters indicating Touch - down, Mid point and Stop - end values for the RWY in use. Where all three readings are reported to the pilot, they are passed as three

sets of figures representing Touch - down, Mid point and Stop - end respectively. e.g.:

RVR 650 - 500 - 550

3.5.1.3.2.4 If only two values are passed they will be identified, for example, as follows:

RVR Touch - down 650 - Stop - end - 550

3.5.1.3.2.5 If only one unit is serviceable it will be identified, for example, as follows:

RVR Mid - point 650

except that if the only serviceable unit is the Stop - end, the value will not be reported and the whole system will be placed unserviceable for that RWY.

3.5.1.4 Meteorological Observations and Reports

Table GEN 3.5.1.4 Meteorological Observations and Reports

Name of Station Location Indicator	Type and frequency of observations / autom. equipment	Types of MET reports and Suppl. Information included	Observation System and sites	Hours	Climatological Information Available
BAHRAIN MET BAHRAIN INTERNATIONAL OBBI	Half hour plus special observations	METAR, SPECI, TREND & WS	SFC wind sensors RVR EQPT Ceilometer Thermometer See AD Chart	H24	Climatological tables AVBL

3.5.1.4.1 NOTIFICATION REQUIRED FROM OPERATORS

Pursuant to ICAO Annex 3, chapter 2, paragraph 2.3, notification in respect of all flight documentation and briefing is normally required. Such notification should normally be received at least six hours before expected departure time for flight of more than 1500 NM and at least 2 hours before expected departure time for flights of 1500 NM or less.

3.5.1.5 Types of Service

A 24-hour personal briefing and consultation service for flight crews is provided. Flights documentation provided comprises prognostic charts of upper air (for 250 MB) and significant weather (above FL 250) for long - haul flights. Charts for 500, 300 and 200 MB are available by prior arrangement. Rout sector winds for 700 MB and significant weather charts (above 10000 FT) are provided for regional flights.

Take-off data and climb and descent winds are also provided, together with the latest available aerodrome forecasts for designation and alternates.

Satellite imagery and local weather radar displays are available for inspection at the MWO and satellite imagery can be provided on request.

3.5.1.6 Aircraft Reports required from Pilots

In Flight

In accordance with Annex 3, chapter 5, paragraph 5.3.1, the marking and transmission of aircraft reports (AIREP) is required of the following ATS reporting points:

BAHRAIN (DAVRI, TORBO, SODAK or SOGAT)

Reports also requested at:

TOMSO, DEGSO, RESAR, ORSIS, TUMAK, ALPOB, ORMID, ULADA, RABAP

After landing

To establish a data-base for validating enhanced forecast information for take-off procedures, pilots of aircraft equipped with Flight Management Systems are requested to record winds and temperatures at and below 3000 FT at 500 FT intervals on a pro forma provided, and submit it to ground services after landing whenever operational requirements permit.

Pro forma are available from BAHRAIN AIRPORT SERVICES (BAS) and the MET / AIS Briefing Office.

3.5.1.7 VOLMET Service

Name of Station	Call Sign ID (EM)	Freq.	BCST period	Hours of services	ADs included	Continents & Format of REP and FCST & Remarks
BAHRAIN	BAHRAIN VOLMET (A3E)	128.800 MHZ	H24	CNS	OBBI, OEDF, OEJN, OERK, OKBK, OMAA, OMDB, OMRK, OMSJ, OMMS, and OTBD	METAR, TREND, QNH

3.5.1.8 SIGMET Service / Validity

Name of MWO / Location Indicator	Hours	FIR Served	Type of SIGMET / Validity	Specific Procedures	ATS Unit served	Additional Information
BAHRAIN	H24	BAHRAIN FIR / BAHRAIN UIR	SIGMET / 4 HR SIGMET SST / 4 HR	NIL	BAHRAIN ACC SHAIKH ISA APC DOHA APC	NIL

3.5.1.8.1 General

For safety of air traffic the Bahrain Meteorological Service maintains an area meteorological watch and warning service. This service consists partly in a continuous weather watch within the FIR / UIR and the issuance of appropriate information (SIGMET) by the Meteorological Watch Office, partly in the issue of warnings for BAHRAIN INTERNATIONAL airport and, subject to agreement, for other aerodromes by all aeronautical MET office.

3.5.1.8.2 Area Meteorological Watch Service

The area meteorological watch service is performed by the Bahrain Meteorological Watch Office. The MWO issues information in the form of SIGMET messages about occurrence or expected occurrence of one of several of the following significant meteorological phenomena.

Thunderstorms* (Obscured, Embedded, Frequent, Obscured with Hail, Embedded with Hail, Frequent with Hail).
 Severe turbulence
 Severe icing
 Severe mountain waves
 Heavy sands / dust - storm
 Volcanic ash cloud
 Tropical cyclone

* Area of widespread Cumulonimbus clouds or Cumulonimbus along a line (squall line) with little or no space between individual clouds, or Cumulonimbus embedded in cloud layers or obscured by haze.

SIGMET SST messages are issued as required and relate to the following phenomena:

Cumulonimbus
 Turbulence (mod / severe/)
 Hail
 Volcanic ash cloud

The SIGMETS are issued in abbreviated plain language using ICAO abbreviations and are numbered consecutively for each day commencing at 0001. Their period of validity is generally limited to 4 hours or less from the time of transmission. The MWO transmits SIGMETS issued by itself as well as SIGMETS of adjacent MWOs. SIGMET Information is disseminated.

- by the Area Control Centre Bahrain for the BAHRAIN FIR / BAHRAIN UIR;
- by ATS units for their own area of responsibility.

The information is broadcast from Aeronautical Communication Centre and repeated every half and full hour during the period of validity of the SIGMET Information.

3.5.1.8.3 Warning Service

Warnings are issued for the safety of aircraft taking off and landing for the protection of parked and moored aircraft or equipment at the airport. Warnings are issued in plain language.

Aerodrome Warnings are issued when one or more of the following phenomena are expected to affect the airport:

- Thunderstorm
- Squall 1
- Sandstorm / dust storm
- Rising sand / dust
- Strong surface wind 2
- Temperature inversion 3
- Hail
- Low level turbulence

Note 1: *squall relates to a sudden increase of wind speed of at least 16 KT, the speed being 22 KT or more.*

Note 2: *strong wind refers to mean wind speed of 22 KT or more and / or gusts of 28 KT or more.*

Note 3: *Temperature inversion warnings are issued for a lapse of 07° C or more, at or below 1500 FT.*

Wind Shear Warnings are issued within a radius of 8 KM from the airport and up to 1600 FT. For vertical Shear the following criteria are used:

- Mod 5 - 8 KT / 100 FT
- Str 9 - 12 KT / 100 FT
- Svr 12 or more KT / 100 FT

Horizontal shear refers to a vector change of more than 20 KT. All warnings are valid for 1 to 4 hours unless cancelled. Each type of warnings is numbered consecutively on a monthly basis.

The warnings are issued in English and are distributed in accordance with a distribution list which has been agreed upon locally. In order to guarantee a rapid dissemination of the warnings, the distribution list used contains only one recipient for an interested group; this recipient will be responsible for the further dissemination for the warnings within the group.

3.5.1.9 Other Automated Meteorological Services

NIL

3.5.1.10 Meteorological Briefing at Aerodromes

Details of meteorological briefing at aerodromes are given in the individual aerodrome subsections i.e. AD 2.

GEN 3.6 SEARCH AND RESCUE**3.6.1 Responsible Service**

The Search and Rescue Services in the BAHRAIN FIR / BAHRAIN UIR are organized in accordance with the International Standards and Recommended Practices of ICAO, and overall responsibility for coordinating the necessary facilities rests with the Undersecretary for Civil Aviation, Bahrain Civil Aviation Affairs, Kingdom of Bahrain:

Bahrain Rescue Coordination Center (RCC)
P.O. Box 586
Kingdom of Bahrain
TEL: +973 17329969 / +973 17329959
Telefax: +973 17329949
AFS: OBBISARX

Note 1: New AFTN address OBBINEMX is established for the purpose of Nuclear Emergency Message (NEM).

Note 2: There is a direct speech circuits between the RCC and all related ATC Units.

Note 3: Out of the normal working hours from 0400 to 1100 to call +973 17321081 and FAX +973 17321029

Applicable ICAO Documents:

Annex 12 Search and Rescue
Annex 13 Aircraft Accident Investigation
Doc 7030 Regional Supplementary Procedures

Differences:

NIL

3.6.2 Area of Responsibility

The Search and Rescue Region encompasses the BAHRAIN FIR / BAHRAIN UIR, excluding the Qatar land and territorial waters.

3.6.3 Types of Service**3.6.3.1 Coastguard Search and Rescue Unit**

Facilities Available: Marine Craft

Ministry of Interior CGD

3.6.3.4 COSPAS / SARSAT

Area Control Centre ACC is located at the Civil Aviation Affairs / Air Navigation Directorate to detect and locate the position of distress signals permitted on 121.500 MHZ and 406.000 MHZ and received by the COSPAS / SARSAT satellite system. Distress signals received at the ACC will be notified to the appropriate Rescue Coordination Centre (RCC) in order to initiate immediate search and rescue coordination.

3.6.4 SAR agreements

To be developed

3.6.5 Conditions of availability

Assistance will be provided to aircraft in distress and to survivors of aircraft accidents. In addition to the facilities outlined in **GEN 3.6.3** various elements of Police organizations, the Merchant Marine and the Armed Forces are available to the Search and Rescue Organization.

Requests for entry of aircraft, equipment and personnel from other States to engage in the search for aircraft in distress or to rescue survivors of aircraft accidents should be transmitted to:

Undersecretary for Civil Aviation
P.O. Box 586
Kingdom of Bahrain
TEL: +973 17321081 / +973 17320487
Telefax: +973 17329949
AFS: OBBISARX

Unwarrant Operations

Civil Aviation Affairs, as the authority responsible for the coordination of rescue services for the Bahrain SRR, reserves the right to take steps to recover expenditure, incurrent either by aerodrome services or other participants involved in search and rescue operations, whenever circumstances show that the operation was unwarranted.

3.6.6 Procedures and signals used

Owing to the nature terrain, aircraft are advised to maintain a good look - out at all times whilst operating within the BAHRAIN FIR / BAHRAIN UIR and are requested to inform the Bahrain FIC immediately they see anything which might be relate to an aircraft in distress.

Procedures for pilots - in - command observing an accident or intercepting a distress call are in accordance with Annex 12.

Communications

Transmission and reception of distress messages within the Bahrain Search and Rescue Region are handled in accordance with ICAO Annex 10, Volume II, Chapter 5, paragraph 5.3.

For communications during search and rescue operations, the codes and abbreviations published in ICAO Abbreviations and Codes (Doc 8400) are used.

The frequency 121.500 MHZ is guarded continuously during the hours of service at an area control centers and flight information centers. It is also monitored at BAHRAIN INTERNATIONAL Approach Control Office.

Search and rescue signals

The search and rescue signals to be used are those prescribed in Annex 12, Chapter 5, paragraph 5.10.

Ground / air visual signal codes for use by survivors

NO.	Message	Code symbol
1	Require assistance	V
2	Require medical assistance	X
3	No or negative	N
4	Yes or affirmative	Y
5	Proceeding in this direction	->
Instructions for use: 1. Make signals not less than 8 FT (2.5 M). 2. Take care to lay out signals exactly as shown. 3. Provide as much color contrast as possible between signals and background. 4. Make every effort to attract attention by other means such as radio, flares, smoke, reflected light.		

INTENTIONALLY BLANK

GEN 4.

CHARGES FOR AERODROMES / HELIPORTS AND AIR NAVIGATION SERVICES

GEN 4.1 AERODROME / HELIPORT CHARGES

KINGDOM OF BAHRAIN

4.1.1 GENERAL

4.1.1.1 Unless an alternative arrangement has been made, all charges for the use of BAHRAIN INTERNATIONAL airport are payable by the pilot of the aircraft on demand, or before the aircraft departs from the aerodrome.

4.1.1.2 NON - SCHEDULED OVER FLIGHT

Operators of non - scheduled flights within the BAHRAIN FIR / BAHRAIN UIR which do not land at BAHRAIN INTERNATIONAL airport must ensure that the full name and address of the Aircraft Operator, or of the Agent authorized to pay charges on behalf of the Aircraft Operator, is include in Field 18 of the Flight Plan. In addition to the following:

- 1- Operator name.
- 2- Operator postal address.
- 3- Postal address of the company for collecting our bills and settling our payments.
- 4- Call sign and registration separately if they were different.
- 5- Aircraft type and the maximum takeoff weight.
- 6- The postal address of the agent and its client if any.
- 7- Telephone and fax numbers.
- 8- E-mail address.

4.1.1.3 LANDING CHARGES

4.1.1.3.1 BASIS

The maximum take - off mass of the aircraft, authorized by the State of Registration in its certificate of airworthiness.

ICAO VORTEX CLASSIFICATION	MTOM	CHARGE
Light	Up to 7000 KG	BD 7.000 flat rate
Medium	7001 up to 136000 KG	BD 1.400 per 1000 KG or part of thereof
Heavy	Over 136000 KG	BD 1.500 per 1000 KG or part thereof

4.1.1.3.2 RULES

4.1.1.3.2.1 The payment of the Landing Charge shall entitle the aircraft to:

- a) The use of the aerodrome for alighting and departure.
- b) The use of the radio and night lighting installations at the aerodrome.
- c) The supply of all available information as to routes, and weather information.
- d) The services of the aerodrome personnel, if available, for manual assistance in guiding, housing, or parking the aircraft.

4.1.1.3.2.2 The landing charge, the payment of which entitles the aircraft to the use of the radio, does not include operational charges or charges for radio services in connection with movement, which may be levied by an approved agency of the Government.

4.1.1.3.3 PAYMENT OF CHARGES

4.1.1.3.3.1 Charges must be paid to the Duty Aerodrome Reporting Office Official prior to the departure of the aircraft, unless previous arrangements have been made for credit facilities.

4.1.1.3.3.2 A money - changing facility exists in the passenger concourse of the Terminal Building.

4.1.1.3.3.3 BAHRAIN AIPIRT CHARGES

In response to the privatization plan which the kingdom of Bahrain is adopting nowadays to some governmental agencies, Bahrain International Airport is considered to be one of those agencies who must go with the privatization plan.

In this context, Bahrain Airport Company has contracted the Bahrain International Airport and the associated facilities. The following elements shall be considered applicable immediately:

1. **LANDING & PARKING CHARGES:** Invoices raised for such matters are solely and accordingly devolved to Bahrain Airport Company since July 2010. Therefore, correspondence serving similar nature shall be made to the following contact details:

e-mail: Fatima.Ajawi@bac.bh
TEL: (+973) 17 353381
Telefax: (+973) 17 920441

2. **CHARGES OTHER THAN THE ABOVE:** In response to the development and improvement in Civil Aviation Affairs payment process, all payments due to be made other than landing and parking fees must be sent to Civil Aviation Affairs containing the following:

- 1- Operator name.
- 2- Include all invoices numbers for the payment.
- 3- Operator code.
- 4- Any contact details.

While it is not our intention to disrupt your services, please be advised that if payment didn't contain any of the above listed information, we will be left with no option but to give priority to the old outstanding invoices, where all the correspondence shall be made to the following contact details:

e-mail: debt.collection@mtt.gov.bh
TEL: (+973) 17 337724 / 17 327739 / 17 327707
Telefax: (+973) 17 534722

4.1.1.3.4 REDUCTIONS

4.1.1.3.4.1 General

Reductions in the standard charges may be granted by Civil Aviation Affairs by the issuance of specific directives. Details upon application.

4.1.1.3.4.2 The following reductions in landing fees may be granted, by prior arrangement with the airport authority, in respect of flights undertaken solely for the purpose of the training or testing of flying personnel, or in respect of flights performed by an aircraft constructor and undertaken solely for the purpose of experimenting with or testing the constructor's aircraft.

4.1.1.3.4.3 AIRCRAFT WEIGHING / RATES PER LANDING

AIRCRAFT WEIGHING	RATES PER LANDING
Up to 45000 KG	50 % of the standard charge
Exceeding 45000 KG, but not exceeding 90000 KG	BD 30
Exceeding 90000 KG	25 % of the standard charge up to a maximum of BD 100

4.1.1.3.4.4 A reduction in the standard fee may be granted, by prior arrangement with Civil Aviation Affairs, in respect of a series of flights through Bahrain, when landing are made for non - traffic purposes, e.g. fuelling, crew - rest, change of crew.

4.1.1.3.5 EXEMPTIONS

4.1.1.3.5.1 GENERAL

Exemptions from payment of landing charges for aircraft other than those listed below may be granted by Civil Aviation Affairs by the issuance of special directives. Details upon application.

4.1.1.3.5.2 The following aircrafts shall be exempted by law from landing and parking fees:

- a) State aircraft and aircraft of Kings. Heads of State and Emirs and persons of similar status;.
- b) Aircraft of the United Nations and its specialised agencies;
- c) Aircraft of the League of Arab States and its specialised agencies, and aircraft of regional organisations of which the Sate is a member..
- d) Aircraft used free of charge in ambulance operations, search and rescue operations, as well as aircraft of the Red Crescent and Red Cross; and
- e) Any other aircraft or any government or diplomatic agency that the Minister may exempt from fees either totally or partially, if this is in the public interest, following consultation with the Minster of Finance and approval of the Prime Minster.

4.1.1.4 PASSENGER SERVICE CHARGES

4.1.1.4.1 4.1.1.4.1 Unless specifically exempted by the appropriate Authority, the following Passenger service charges are levied on all

Passengers as follows:-

4.1.1.4.1.1 An Airport charge of BD 7,000 (SEVEN) is levied on all Passengers leaving the Kingdom of Bahrain by Air.

4.1.1.4.1.2 An Airport charge of BD 1,000 (ONE) is levied on all transfer Passengers through the Kingdom of Bahrain.

4.1.1.4.1.3 Common user Platform service of (30 CENT) of a (USD) per Passengers check-in shall be so charged.

4.1.1.4.1.4 All the above charges are Incorporated in the Passengers ticket upon issuance.

4.1.1.4.2 **Exemptions**

4.1.1.4.2.1 General

Exemptions from payment of landing charges for aircraft other than those listed below may be granted by Civil Aviation Affairs by the issuance of special deirecves. Detail upon application.

The following aircrafts should be exempted by law from landing and parking fees:

4.1.1.4.2.2 The following categories shall be exempt from departure service charge:

- a) Bahraini and foreign official and deplomatic delegations.
- b) Chiefs and members of the diplomatic missions approved by the State.
- c) Members of the aircraft crew, provided they are dressed formally;
- d) Transit passengers.
- e) Children who are less than two years of age.

4.1.1.4.2.3 The Minster may exempt any other categories, after obtaining the opinon of the Minster of Finance and approval of the Prime Minster.

4.1.1.5 **PARKING**

4.1.1.5.1 Maximum take - off weight of the aircraft authorized by the State of Registration in its certificate of airworthiness.

4.1.1.5.2 **PARKING RATES**

Aircraft up to 25000 KG MTOW	Flat rate BD 5.000
Aircraft of 25001 KG MTOW & over	BD 0.200 per 1000 KG or part thereof

See **GEN 4.1.1.5.3.1** for applicability

4.1.1.5.3 **RULES**

4.1.1.5.3.1 No parking fee will be charged for the first two hours after landing. After the first two hours and for each period of 24 hours or part thereof the above parking rates will be charged.

4.1.1.5.3.2 An authorized official from Civil Aviation Affairs may at any time order an aircraft operator either to move a parked aircraft to another position, or to remove it from the airport. Failure to comply with the order within the period specified in it will render the operator liable to a special charge, equivalent to five times the standard parking charge set out above, for every day or part of a day during which the aircraft remains in position after the expiry of the period specified in the order.

4.1.1.5.4 **PAYMENT OF CHARGES**

See payment of landing charges.

4.1.1.5.5 **REDUCTIONS**

4.1.1.5.5.1 Monthly rates, payable in advance, are 22 times the daily rates.

4.1.1.5.5.2 Reductions in the standard charges may be granted by Civil Aviation Affairs by the issuance of special directives. Details upon application.

4.1.1.5.6 **EXEMPTIONS**

The same as for exemption for landing charges.

INTENTIONALLY BLANK

GEN 4.2 AIR NAVIGATION SERVICES CHARGES**4.2.1 EN - ROUTE CHARGES****4.2.1.1 GENERAL**

4.2.1.1.1 An en - route charge will be payable by the owner or operator of the aircraft concerned in respect of each flight carried out, whether in whole or in part within the BAHRAIN FIR / BAHRAIN UIR, which entails the use of facilities provided by the Bahrain Air Traffic Control Centre in accordance with authorised procedures.

4.2.1.1.2 A flight is defined as the complete process of take - off, journey en - route and subsequent landing.

4.2.1.1.3 The assessment for the en - route charge is based on a sliding scale relating to the maximum permitted take - off weight of the aircraft.

4.2.1.2 SCALE OF CHARGES**4.2.1.2.1 STANDARD CHARGES**

The standard charge will be assessed in accordance with the following schedule:

Charges impose on each landing and take-off to / from Bahrain International Airport	
Weight	Charges
Up to 40,000 Kg	BD 12.600
40,001 Kg - 80,000 Kg	BD 18.900
80,001 Kg - 120,000 Kg	BD 25.200
120,001 Kg - 200,000 Kg	BD 31.500
200,001 Kg - 300,000 Kg	BD 37.800
300,001 Kg or more	BD 42.000

4.2.1.3 EN-ROUTE CHARGES

Air Navigation charges for aircraft that does not landing in Bahrain International Airport	
Weight	Charges
Up to 40,000 Kg	BD 24.000
40,001 Kg - 80,000 Kg	BD 35.000
80,001 Kg - 120,000 Kg	BD 47.000
120,001 Kg - 200,000 Kg	BD 59.000
200,001 Kg - 300,000 Kg	BD 71.000
300,001 Kg or more	BD 79.000

4.2.1.4 REBATES

Rebates in the standard charges may be granted by Civil Aviation Affairs upon issuance of specific directives. Details upon application.

A special rate of 50% of the standard en - route charge may be applied in the case of a flight carried out for the sole purpose of the training or testing of flying personnel that entails the aircraft being flown outside the aerodrome Control Zone. Prior written application for the grant of such special rates should be made to the Under Secretary of Civil Aviation, Bahrain.

4.2.1.5 EXEMPTIONS**4.2.1.5.1 GENERAL**

Exemptions from the payment of en - route charges other than those listed below may be granted by Civil Aviation Affairs by the issuance of special directives. Details upon application.

4.2.1.5.2 The following classes of aircraft are exempt by law from Air Navigation Services charges:

- a) State aircraft and aircraft of Kings, Heads of State and Emirs and persons of similar status;
- b) Aircraft of the United Nations and its specialised agencies;
- c) Aircraft of the League of Arab States and its specialised agencies, and aircraft of regional organisations of which the State is a member;
- d) Aircraft used free of charge in ambulance operations, search and rescue operations, as well as aircraft of the Red Crescent and Red Cross; and
- e) Any other aircraft or any government or diplomatic agency that the Minister may exempt from fees either totally or partially, if this is in the public interest, following consultation with the Minister of Finance and approval of the Prime Minister.

INTENTIONALLY BLANK

ENR 1.2 VISUAL FLIGHT RULES

1.2.1. Except when operating as a special VFR flight, VFR flights shall be conducted so that the aircraft is flown in conditions of visibility and distance from clouds equal to or greater than those specified in Table 1.

1.2.2. Except when a clearance is obtained from an air traffic control unit, VFR flights shall not take off or land at an aerodrome within a control zone, or enter the aerodrome traffic zone or traffic pattern:

- a) When the ceiling is less than 1500 FT (450 M); or
- b) When the ground visibility is less than 5 KM.

1.2.3. VFR flights between sunset and sunrise, or such other period between sunset and sunrise as may be prescribed by the appropriate ATS authority, shall operated in accordance with the conditions prescribed by such authority.

1.2.4. Unless authorized by the appropriate ATS authority, VFR flights shall not be operated:

- a) at or above FL 150,
- b) at transonic and supersonic speeds.

Airspace class	A *** B C D E	F G	
		ABOVE 3000 FT (900 M) AMSL or above 1000 FT (300 M) above terrain, whichever is the higher	At and below 3000 FT (900 M) AMSL or 1000 FT (300 M) above terrain, whichever is the higher
Distance from cloud	1500 M horizontally 1000 FT (300 M) vertically		Clear of cloud and in sight of the surface
Flight visibility	8 KM at and above 10000 FT (3050 M) AMSL 5 KM below 10000 FT (3050 M) AMSL		5 KM **

Table *

* When the height of the transition altitude is lower than 10000 FT (3050 M) AMSL, FL 100 should be used in lieu of 10000 FT.

** When so prescribed by the appropriate ATS authority:

a) lower flight visibilities to 1500 M may be permitted for flights operating:

- 1. at speeds that, in the prevailing visibility, will give adequate opportunity to observe other traffic or any obstacles in the time to avoid collision; or
- 2. in circumstances in which the probability of encounters with other traffic would normally be low, e.g. in areas of low volume traffic and for aerial work at low levels.

b) HELICOPTERS may be permitted to operate in less than 1500 M flight visibility, if maneuvered at a speed that will give adequate opportunity to observe other traffic or any obstacles in time to avoid collision.

*** The VMC minima in Class A airspace are included for guidance to pilots and do not imply acceptance of VFR flights Class A airspace.

1.2.5. Except when necessary for take - off or landing, or except by permission from the appropriate authority, a VFR flight shall not be flown:

- a) over the congested area of cities, towns or settlements or over an open - air assembly of persons at a height less than 1000 FT (300 M) above the highest obstacle within a radius of 600 M from the aircraft;
- b) elsewhere than as specified in 5 (a), at a height less than 500 FT (150 M) above the ground or water.

1.2.6. Except where otherwise indicated in air traffic control clearances or specified by the appropriate ATS authority, VFR flights in level cruising flight when operated above 3000 FT (900 M) from the ground or water, or a higher datum as specified by the appropriate ATS authority, shall be conducted at a flight level appropriate to the track as specified in the table of cruising levels.

1.2.7. VFR flights shall comply with the provisions of Chapter 3 para 3.6 of Annex 2:

- a) when operated within Class B, C and D airspace;
- b) when forming part of aerodrome traffic at controlled aerodromes; or
- c) when operated as special VFR flights.

1.2.8. An aircraft operated in accordance with the visual flight rules which wishes to change to Compliance with the instrument flight rules shall:

- a) If a flight plan was submitted, communicate the necessary changes to be effected to its current flight plan, or

-
- b) When so required by Chapter 3 para 3.3 of Annex 2, submit a flight plan to the appropriate air traffic services unit and obtain a clearance prior to proceeding IFR when in controlled airspace.

ENR 1.3 INSTRUMENT FLIGHT RULES**1.3.1 RULES APPLICABLE TO ALL IFR FLIGHTS****1.3.1.1 Aircraft equipment**

Aircraft shall be equipped with suitable instruments and with navigation equipment appropriate to the route to be flown.

1.3.1.2 Minimum levels

Except when necessary for take - off or landing except when specifically authorized by the appropriate authority, an IFR flight shall be flown at a level which is not below the minimum flight altitude established by the State whose territory is overflown or, where no such minimum flight altitude has been established:

- a) over high terrain or in mountainous areas, at a level which is at least 2000 FT (600 M) above the highest obstacle located within 8 KM of the estimated position of the aircraft;
- b) elsewhere than as specified in a), at a level which is at least 1000 FT (300 M) above the highest obstacles located within 8 KM of the estimated position of the aircraft.

Note: *The estimated position of the aircraft will take account of the navigational accuracy which can be achieved on the relevant route segment, having regard to the navigational facilities available on the ground and in the aircraft.*

1.3.1.3 Change from IFR flight to VFR flight

1.3.1.3.1 An aircraft electing to change the conduct of its flight from compliance with the instrument flight rules to compliance with the visual flight rules shall, if a flight plan was submitted, notify the appropriate air traffic services unit specifically that the IFR flight is cancelled and communicate thereto the changes to be made to its current flight plan.

1.3.1.3.2 When an aircraft operating under the instrument flight rules is flown in or encounters visual meteorological conditions it shall not cancel its IFR flight unless it is anticipated, and intended, that the flight will be continued for a reasonable period of time in uninterrupted visual meteorological conditions.

1.3.2 RULES APPLICABLE TO IFR FLIGHTS WITHIN CONTROLLED AIRSPACE

1.3.2.1 IFR flights shall comply with the provisions of 3.6 of Annex 2 to the Convention on International Civil Aviation when operated in controlled airspace.

1.3.2.2 An IFR flight operating in cruising flight in controlled airspace shall be flown at a cruising level or, if authorized to employ cruise climb techniques, between two levels or above a level, selected from:

- a) the tables of cruising levels in Appendix 3 of Annex 2 or,
- b) a modified table of cruising levels, when so prescribed in accordance with Appendix 3 of Annex 2 for flights above FL 410.

Except that the correlation of levels to track prescribed therein shall not apply whenever otherwise indicated in air traffic control clearance or specified by the appropriate ATS authority in the Aeronautical Information Publication.

For cruising levels within the BAHRAIN FIR / BAHRAIN UIR see **ENR 1.3.3.1**.

1.3.2.3 Five minutes longitudinal separation

In accordance with ICAO DOC 4444 PARA 5.4.2.2.1.1 C. Within the AMMAN FIR, BAHRAIN FIR / BAHRAIN UIR, DAMASCUS FIR, JEDDAH FIR and NICOSIA FIR / NICOSIA UIR, a minimum of five minutes longitudinal separation will be applied when the leading aircraft is maintaining a TAS of 20 KTs or more faster than the following aircraft.

The application of this separation minimum may require ATC to impose speed restrictions on aircraft. When subject to speed restrictions, pilots must notify ATC immediately if at any time they are unable to comply with the restrictions.

Pilots should note that speed restrictions applied in one FIR will continue to apply in succeeding FIRs unless specifically cancelled by ATC.

1.3.3 RULES APPLICABLE TO IFR FLIGHTS OUTSIDE CONTROLLED AIRSPACE**1.3.3.1 Cruising levels**

An IFR flight operating in level cruising flight outside of controlled airspace shall be flown at a cruising level appropriate to its track as specified in:

- a) the tables of cruising levels in Appendix 3 of Annex 2, except when otherwise specified by the appropriate ATS authority for flight at or below 3000 FT (900 M) above mean sea level; or
- b) a modified table of cruising levels, when so prescribed in accordance with Appendix 3 of Annex 2 for flight above FL 410. (Not used at the present in the BAHRAIN UIR)

Note: *This provision does not preclude the use of cruise climb techniques by aircraft in supersonic flight.*

1.3.3.2 Communications

An IFR flight operating outside controlled airspace but within or into areas, or along routes, designated by the appropriate ATS authority in accordance with 3.3.1.2 c) or d) of Annex 2 shall maintain a listening watch on the appropriate radio frequency and established two - way communication, as necessary, with the air traffic services unit providing flight information services.

1.3.3.3 Position reports

An IFR flight operating outside controlled airspace and required by the appropriate ATS authority to:

- submit a flight plan,
- maintain a listening watch on the appropriate radio frequency and establish two - way communication, as necessary, with the air traffic services unit providing flight information service, shall report position as specified in 3.6.3 of Annex 2 for controlled flights.

Note: Aircraft electing to use the air traffic advisory service whilst operating IFR within specified advisory airspace are expected to comply with the provisions of 3.6 of Annex 2, except that the flight plan and changes thereto are not subjected to clearance and that two - way communication will be maintained with the unit providing the air traffic advisory service. There is no Advisory Airspace currently designated within the BAHRAIN FIR / BAHRAIN UIR.

1.3.4 OPERATIONS ON ATS ROUTES IN THE BAHRAIN FIR / BAHRAIN UIR WHERE AN RNAV TYPE IS SPECIFIED

1.3.4.1 APPLICATION OF RNAV 1 AND RNAV 5 TO ATS ROUTES IN THE BAHRAIN UIR

1.3.4.1.1 Requirements for RNAV capability and aircraft navigation accuracy meeting RNAV 1 and RNAV 5 will be progressively introduced in BAHRAIN UIR.

1.3.4.1.2 RNAV 1 and RNAV 5 requirements may be specified on a route by route basis or by designation of airspace..

1.3.4.1.3 Within BAHRAIN UIR only RNAV equipped aircraft having a navigation accuracy meeting RNAV 1 and RNAV 5 may plan for operations under IFR on those ATS routes, and within those levels bands, which have been specified as requiring RNAV 1 and RNAV 5 in **ENR 1.3.4.2**.

1.3.4.1.4 Aircraft operating under IFR on designated RNAV 1 and RNAV 5 routes shall be equipped with, as a minimum, RNAV equipment meeting the following requirements:

- a) A system use accuracy equal to, or better than, (2.5 NM) for one standard deviation, with a 95 % containment value of plus or minus 5 NM, thereby meeting the accuracy requirements for RNAV 5; and
- b) A system use accuracy equal to, or better than, (0.5 NM) for one standard deviation, with a 95 % containment value of plus or minus 1 NM, thereby meeting the accuracy requirements for RNAV 1; and
- c) An average continuity of service of 99.99 % of flight time.

1.3.4.2 AREA OF APPLICABILITY

Area Navigation "RNAV" will be implemented within BAHRAIN FIR / BAHRAIN UIR within designated airspace on area basis as follows:

- All Lower Routes of Bahrain within TMAs are RNAV 1 with requirements.
- RNAV 5 will be implemented from TMA levels to FL 145. At Upper Routes RNAV 1 will be implemented from FL 150 to FL 460 within TMAs.

1.3.4.3 MEANS OF COMPLIANCE

Conformance to the navigation requirement shall be verified by the State of Registry or the State of Operator as appropriate.

Note: Guidance material concerning navigation accuracy requirements is contained in the Manual on Required Navigation performance (RNP) Doc 9613, Chapter 5.

1.3.4.4 FLIGHTS PLANNING

Operators of aircraft fitted with RNAV having a navigation accuracy meeting RNAV 5 shall insert the designator "R" in item 10 of the flight plan.

1.3.4.5 PROCEDURES FOR OPERATION IN RNAV 5 ROUTES

1.3.4.5.1 Correct operation of the aircraft RNAV system shall be verified before joining and during operation on an RNAV 5 route. This shall include confirmation that:

- a) The routing is in accordance with the clearance; and
- b) The aircraft navigation accuracy meets RNAV 5.

1.3.4.5.2 If, as a result of failure of the RNAV system or its degradation to below RNAV 5, an aircraft is unable to enter an ATS route designated as RNAV 5 or to continue operations in accordance with current air traffic control clearance, a revised clearance shall, wherever possible, be obtained by the pilot.

1.3.4.5.3 Subsequent air traffic control action in respect of that aircraft will be dependent upon the nature of the reported failure and the overall traffic situation. Continued operation in accordance with the current ATC clearance may be possible in many situations. When this

cannot be achieved, a revised clearance may be required to revert to VOR / DME.

1.3.4.6 ATC PROCEDURES FOR AIRCRAFT EXPERIENCING FAILURE OR DEGRADATION OF THE RNAV SYSTEM

1.3.4.6.1 If, as a result of failure or degradation of the RNAV system, detected either before or after departure, the aircraft cannot meet the requirements of **ENR 1.3.4.1.4**, the following ATC procedures are applicable.

1.3.4.6.1.1 Coordination messages (PANS ATM / 501 Chapter 11, 11.4.2.3)

- a) *Computer - assisted coordination of estimate messages. In the case of automated messages not containing the information provided in item 18 of the flight plan, the sending air traffic control unit shall inform the receiving air traffic control unit by supplementing the ATC message verbally with the phrase "RNAV OUT OF SERVICE" after the call sign of the aircraft concerned.*
- b) *Verbal coordination of estimate messages. When a verbal coordination process is being used, the sending air traffic control unit shall include the phrase "RNAV OUT OF SERVICE" at the end of the message.*

1.3.4.6.1.2 Pilot phraseology (PANS ATM / 501 Chapter 12)

The phrase "UNABLE RNAV DUE EQUIPMENT" shall be included by the pilot immediately following the aircraft call sign whenever initial contact on an air traffic control frequency is established.

1.3.4.6.1.2.1 All military formation flights are considered NON-RVSM within Bahrain UIR, Regardless of the RVSM status of individual Aircraft in the formation. These Aircraft's shall not be permitted in RVSM Airspace except in exceptional circumstances. These exceptions may be accommodated, subject to prior approval, on a workload or traffic-permitting basis.

1.3.4.7 ATC PROCEDURES FOR STATE AIRCRAFT NOT EQUIPPED WITH RNAV EQUIPMENT MEETING RNAV 5 REQUIREMENTS

1.3.4.7.1 Instructions for the completion of the flight plan (PANS ATM / 501 Appendix 2, A 2 - 3)

1.3.4.7.1.1 Operators of state aircraft not equipped with RNAV equipment meeting RNAV 5 shall not insert "S" or "R" in item 10 of the flight plan.

1.3.4.7.1.2 Since such flight require special handling by air traffic control, "STS / NORNAV" shall be inserted in item 18 of the flight plan.

1.3.4.7.2 Air traffic control clearances (PANS ATM / 501 Chapter 4, 4.5.7)

1.3.4.7.2.1 Within TMAs, state aircraft not equipped with RNAV approved for RNAV 5 should be routed via non - RNAV SIDs and STARs.

1.3.4.7.2.2 Such aircraft operating en - route should be routed via VOR / DME - defined ATS routes.

1.3.4.7.2.3 When the above procedures cannot be applied, the air traffic control unit shall provide the aircraft with radar vectors until the aircraft is capable of resuming its own navigation.

1.3.4.7.3 Coordination messages (PANS ATM / 501 Chapter 11, 11.4.2.3)

- a) *Computer - assisted coordination of estimate messages. In case of automated messages not containing the information provided in item 18 of the flight plan, the sending air traffic control unit shall inform the receiving air traffic control unit by supplementing the ATC message verbally with the phrase "NEGATIVE RNAV" after the call sign of the aircraft concerned.*
- b) *Verbal coordination of estimate messages. When a verbal coordination process is being used, the sending air traffic control unit shall include the phrase "NEGATIVE RNAV" at the end of the message.*

1.3.4.7.4 Pilot phraseology (PANS ATM / 501 Chapter 12)

The phrase "NEGATIVE RNAV" shall be included by the pilot immediately following the aircraft call sign whenever initial contact on an air traffic control frequencies established.

1.3.4.8 EQUIPMENT, REQUIREMENT AND CERTIFICATION

RNAV 5 defines RNAV operations which satisfy a required track keeping accuracy of plus or minus 5 NM for at least 95 % of the flight time in accordance with the requirements set out in ICAO Document 7030 - Regional Supplementary Procedures for the Middle East region, as amended, and ICAO Document 9613 - Manual on RNP.

RNAV equipped aircraft operating on designated RNAV 5 routes in designated RNAV 5 routes airspace must be certified for RNAV 5 operations by the State of Operator or the State of Registry of the aircraft. Conformance to the navigation requirement shall be verified by the State of Registry or the State of Operator, as appropriate.

Foreign air carriers operating within BAHRAIN UIR shall ensure their operations specifications are updated to reflect RNAV 5 approvals.

The address for information regarding RNAV 5 certification is:

Aviation Safety Section
Air Transport Directorate
Civil Aviation Affairs

P.O. Box 586
Kingdom of Bahrain
TEL: +973 17321006
Telefax:+973 17321061
SITA: BAHAPYF

ENR 1.4 ATS AIRSPACE CLASSIFICATION AND DESCRIPTION**1.4.1 ATS airspaces classification**

ATS airspaces are classified and designated in accordance with the following:

Class A. IFR flights only are permitted, all flights are subject to air traffic control services and are separated from each other.

Class B. IFR and VFR flights are permitted, all flights are subject to air traffic control service and are separated from each other.

Class C. IFR and VFR flights are permitted, all flights are subject to air traffic control service and IFR flights are separated from other IFR flights and from VFR flights. VFR flights are separated from IFR flights and receive traffic information in respect of other VFR flights.

Class D. IFR and VFR flights are permitted and all flights are subject to air traffic control service, IFR flights are separated from other IFR flights and receive traffic information in respect of VFR flights, VFR flights receive traffic information in respect of all other flights.

Class E. IFR and VFR flights are permitted, IFR flights are subject to air traffic control service and are separated from other IFR flights. All flights receive traffic information as far as is practical.

Class F. IFR and VFR flights are permitted, all participating IFR flights receive an air traffic advisory service and all flights receive flight information service if requested.

Class G. IFR and VFR flights are permitted and receive flight information service if requested.

The requirements for the flights within each class of airspace are as shown in the following tables.

1.4.2 ATS airspace description

1.4.2.1 Within the BAHRAIN FIR / BAHRAIN UIR the Airspace is further divided into five classifications. A, B, C, D and G. Two ICAO Classifications, E and F which have been adopted by the Kingdom of Bahrain are available for use but at present no portions of BAHRAIN FIR / BAHRAIN UIR Airspace have been classified.

Airspace classified as A, B, C and D are Controlled Airspace.

The Airspace Classifications are described in subsequent paragraphs, and notifications, descriptions and procedures of individual Airspaces within each classification are contained in ENR 2, ENR 3 and AD 2.

1.4.2.2 Airspace Classification**1.4.2.2.1 Class A - Controlled Airspace**

The provisions of Class A Airspace are shown below:

	IFR	VFR
Separation Provided	All Aircraft	VFR FLIGHT NOT PERMITTED
Service Provided	Air Traffic Control Service	
VMC Minima	Not applicable	
Speed Limitation	Not applicable	
Radio Communication	Continuous two - way	
ATC Clearance	Required	

BAHRAIN FIR / BAHRAIN UIR class A airspace, over international waters, is subject to high concentration of military activity acting in due regard in accordance with article 3 of the convention of International Civil Aviation.

Class A Airspace comprises

All controlled Areas (Airways) FL 150 and above.
BAHRAIN CTA FL 150 and above.

1.4.2.2.2 **Class B - Controlled Airspace**

The provisions of Class B Airspace are shown below:

	IFR	VFR
Separation Provided	All Aircraft	All Aircraft
Service Provided	Air Traffic Control Service	Air Traffic Control Service
VMC Minima	Not applicable	At and above 10000 FT AMSL: 8 KM visibility Clear of Cloud Below 10000 FT AMSL: 5 KM visibility Clear of Cloud
Speed Limitation	Not applicable	Not applicable
Radio Communication	Continuous two - way	Continuous two - way
ATC Clearance	Required	Required

Class B Airspace comprises

ISA AIRBASE CTR

1.4.2.2.3 **Class C - Controlled Airspace**

The Provisions of Class C Airspace are shown below:

	IFR	VFR
Separation Provided	IFR from IFR IFR from VFR	
Service Provided	Air Traffic Control Service	Air Traffic Control Service for separation from IFR VFR / VFR Traffic Information (and traffic avoidance advice on request)
VMC Minima	Not applicable	At and above 10000 FT AMSL: 8 KM visibility 1500 M horizontal and 1000 FT vertical distance from Cloud Below 10000 FT AMSL: 5 KM visibility 1500 m horizontal and 1000 FT vertical distance from Cloud
Speed Limitation	Not applicable	250 KT IAS below 10000 FT AMSL
Radio Communication	Continuous two - way	Continuous two - way
ATC Clearance	Required	Required

Class C airspace comprises:

All Controlled Areas (Airways) at and above 4500 FT and below FL 150
BAHRAIN CTA below FL 150

1.4.2.2.4 Class D - Controlled Airspace

The provisions of Class D Airspace are shown below:

	IFR	VFR
Separation Provided	IFR from IFR	Not provided
Service Provided	Air Traffic Control Service including Traffic information about VFR flights (and traffic avoidance advice on request)	Traffic information between VFR and IFR Flights (and traffic avoidance advice on request)
VMC Minima	Not applicable	At and above 10000 FT AMSL: 8 KM visibility 1500 M horizontal and 1000 FT vertical distance from Cloud Below 10000 FT AMSL: 5 KM visibility 1500 horizontal and 1000 FT vertical distance from Cloud
Speed Limitation	Not applicable	250 KT IAS below 10000 FT AMSL
Radio Communication	Continuous two - way	Continuous two-way
ATC Clearance	Required	Required

Class D Airspace comprises:

BAHRAIN CTR and TMA at and above 1000 FT and below 4500 FT

1.4.2.2.5 Class E - Controlled Airspace

The provisions of Class E Airspace are shown below

	IFR	VFR
Separation Provided	IFR from IFR	Not provided
Service Provided	Air Traffic Control Service including Traffic information about VFR flights as far as practicable	Traffic information as far as practicable
VMC Minima	Not applicable	At and above 10000 FT AMSL: 8 KM visibility 1500 M horizontal and 1000 FT vertical distance from Cloud Below 10000 FT AMSL: 5 KM visibility 1500 M horizontal and 1000 FT vertical distance from Cloud
Speed Limitation	250 KT IAS below 10000 FT AMSL	250 KT IAS below 10000 FT AMSL
Radio Communication	Continuous two - way	Not required
ATC Clearance	Required	Not required

No BAHRAIN FIR / BAHRAIN UIR Airspace is currently designated Class E.

1.4.2.2.6 Class F

The provisions of Class F Airspace are shown below:

	IFR	VFR
Separation Provided	IFR from IFR as far as practical	Not provided
Service Provided	Air Traffic Advisory Service Flight Information Service	Flight Information Service
VMC Minima	Not applicable	At and above 10000 FT AMSL: 8 KM visibility 1500 M horizontal and 1000 FT vertical distance from Cloud Below 10000 FT AMSL: 5 KM visibility 1500 m horizontal and 1000 FT vertical distance from Cloud At and below 3000 FT AMSL or 1000 FT above terrain whichever is higher: 5 KM visibility and in sight of ground or water
Speed Limitation	250 KT IAS below 10000 FT AMSL	250 KT IAS below 10000 FT AMSL
Radio Communication	Continuous two - way	Not required
ATC Clearance	Required	Not required

1.4.2.2.7 Class G

The Provisions of Class G Airspace are shown below:

	IFR	VFR
Separation Provided	Not provided	Not provided
Service Provided	Flight Information service	Flight Information Service
VMC Minima	Not applicable	At and above 10000 FT AMSL: 8 KM visibility 1500 M horizontal and 1000 FT vertical distance from Cloud Below 10000 FT AMSL: 5 KM visibility 1500 M horizontal and 1000 FT vertical distance from Cloud At and below 3000 FT AMSL or 1000 FT above terrain whichever is higher and speed greater than 140 KT 5 KM visibility Clear of cloud and in sight of ground or water or; At and below 3000 FT AMSL or 1000 FT above terrain whichever is higher and speed less than 140 KT 1500 M visibility clear of cloud and in sight of ground or water
Speed Limitation	250 KT below 10000 FT AMSL	250 KT IAS below 10000 FT AMSL
Radio Communication	Continuous two - way	Not required
ATC Clearance	Not required	Not required

Class G Airspace comprises:

All BAHRAIN FIR / BAHRAIN UIR Airspace not covered by classes A, B, C and D.

INTENTIONALLY BLANK

ENR 1.5 HOLDING, APPROACH AND DEPARTURE PROCEDURES**1.5.1 GENERAL**

1.5.1.1 The holding, approach and departure procedures in use are based on those contained in the latest edition of ICAO DOC 8168 - OPS - procedures for Air Navigation Services - Aircraft Operation (PANS - OPS).

1.5.1.2 The holding and approach procedures in use have been based on the values and factors contained in Part II of the PANS - OPS. The holding patterns shall be entered and flown as indicated below:

Flight level (FL)	CAT A and B aircraft	Jet Aircraft	
		Normal conditions	Turbulence conditions
Up to 13000 FT (4250 M) inclusive	170 KT	230 KT (425 KM / H)	
Above 13000 FT (4250 M) to FL 200 (6100 M) inclusive	240 KT (445 KM / H)		280 KT (520 KM / H) or (Mach 0.8) which ever is less
Above FL 200 (6100 M) to FL 340 (10350 M) inclusive	265 KT (490 KM / H)		
Above FL 340 (10350 M)	0.83 Mach		0.84 Mach

1.5.2 ARRIVING FLIGHTS

1.5.2.1 IFR flights entering and landing within, a Terminal Control Area will be cleared to a specified holding point and instructed to contact Approach Control at a specified time, level or position. The terms of this clearance shall be adhered to until further instructions are received from Approach Control. If the clearance limit is reached before further instructions have been received, holding procedure shall be carried out at the level last authorized.

1.5.2.2 Due to the limited airspace available, it is of importance that the approaches to the patterns and the holding procedures are carried out as exactly as possible. Pilots are strongly requested to inform ATC if for any reason the approach and / or holding cannot be performed as required.

1.5.2.3 No landing will be allowed to BAHRAIN INTERNATIONAL airport RWY 12R / 30L if the reported met visibility is less than 4000 M.

1.5.2.4 For CAT I ILS approaches the localiser is not to be used below 200 FT AGL.

1.5.2.5 Pilots carrying out practice CAT II or III approaches are cautioned that ILS critical and sensitive areas are not protected to CAT II / III standards.

1.5.2.6 Instrument approach charts publish applicable Obstacle Clearance Altitude (OCA) for the procedure. This should not be confused with the Decision Altitude (DA) established by the operator in accordance with the provisions of ICAO Annex 6. However, in accordance with ICAO standards, the Decision Height for ILS approaches established by operators shall in no case be lower than ILS CAT I - 200 FT above THR ELEV.

1.5.2.7 All ACFT arriving BAHRAIN INTERNATIONAL airport are requested to advise BAHRAIN GMC of ACFT registration after landing.

1.5.2.8 All ACFT arriving BAHRAIN INTERNATIONAL airport are required to adjust IAS as per the following speeds unless otherwise instructed by ATC:

Unless otherwise authorized by the ATC, no aircraft below 10000 FT MSL may operate at an indicated airspeed of more than 250 KT.

1.5.2.9 The longitudinal separation between aircraft established on final approach runway 30R/12L is reduced to 3NM.

1.5.3 DEPARTING FLIGHTS

1.5.3.1 IFR flights departing from controlled aerodromes will receive initial ATC clearance from the local Aerodrome Control Tower. The clearance limit will normally be at the aerodrome of destination. IFR flights departing from non-controlled aerodromes will not take - off without prior arrangements with BAHRAIN ACC.

1.5.3.2 Detailed instructions will be issued with regard to routes, turns, etc. after take - off.

1.5.3.3 Pilots are required to call BAHRAIN GROUND on freq 121.850 MHZ ten minutes prior to start - up for the purpose of ATC

clearance delivery.

1.5.4 BAHRAIN AND DOHA TMAs, BAHRAIN CONTROL ZONE

1.5.4.1 REPORTING POINTS

The reporting points for aircraft taking off, operating, or landing within the Control Area are as instructed by ATC.

1.5.4.2 The reporting points for aircraft overflying the Control Area or Control Zone are as follows:

BHR DVOR / DME

Compulsory REP

Or such other positions as may, from time to time, be indicated in an ATC clearance.

1.5.4.3 HOLDING POINTS

1.5.4.3.1 En - route holding points are as instructed by ATC.

1.5.4.3.2 High level holding will be carried out at FL 150 and above.

1.5.4.4 ROUTING

Aircraft are not permitted to route off the centre - lines of the published routes unless specifically instructed by ATC.

ENR 1.6 RADAR SERVICES AND PROCEDURES**1.6.1 PRIMARY RADAR****1.6.1.1 Radar Units**

Radar units in the BAHRAIN FIR / BAHRAIN UIR operate as integral parts of the parent ATS unit and provide radar service, to the maximum extend practicable, to meet the operational requirement. Factors, such as radar coverage, controller workload, and equipment capabilities, may affect these services, and the radar controller shall determine whether he is able to provide, or continue to provide, radar services in any specific case.

1.6.1.2 Radar Service

A pilot will know when radar services are being provided because the radar controller will use the ATS callsign depending on the position of the aircraft in BAHRAIN FIR / BAHRAIN UIR and under what ATS unit the aircraft is operating, followed by "Radar" for example:

- a) Aircraft under Area Control - "BAHRAIN RADAR";
- b) Aircraft under Approach Control - "BAHRAIN APPROACH".

1.6.1.3 RADAR COVERAGE

The following radar units operate within the BAHRAIN FIR / BAHRAIN UIR:

a) BAHRAIN MSSR:

Position: 261637.66 N 0503751.96 E

Range: 240 NM

b) BAHRAIN TAR with co - located MSSR:

Position: 261600.45 N 0503845.69 E

Range: Primary 80 NM, Secondary 256 NM

(Note that Bahrain may delegate the responsibility for providing ATS, FIS and Alerting Service to other radars when aircraft are within their cover in the BAHRAIN FIR / BAHRAIN UIR.)

1.6.1.4 THE APPLICATION OF RADAR CONTROL SERVICE

1.6.1.4.1 RADAR IDENTIFICATION is achieved according to the provisions specified by ICAO.

1.6.1.4.2 RADAR SERVICES

Radar control service is provided in controlled airspace to aircraft operating within BAHRAIN CTA and on airways within Bahrain radar coverage. These services may include:

- a) radar separation of arriving, departing and en-route traffic;
- b) radar monitoring of arriving, departing and en-route traffic to provide information on any significant deviation from normal flight path;
- c) radar vectoring when required;
- d) assistance to aircraft in emergency;
- e) assistance to aircraft crossing controlled airspace;
- f) warnings and position information on other aircraft considered to constitute a hazard;
- g) information to assist in the navigation of aircraft;
- h) information on observed weather.

Radar Advisory Service and Flight Information Service are provided to identified aircraft operating within the BAHRAIN FIR / BAHRAIN UIR to the extent possible within radar cover.

1.6.1.4.3 MINIMUM HORIZONTAL RADAR SEPARATION

BAHRAIN PSR (TAR Range 80): 20 NM when one aircraft is supersonic, otherwise 5 NM.

BAHRAIN MSSR: 20 NM when one aircraft is supersonic, otherwise 10 NM reducing to 5 NM within 150 NM of radar head.

TERRAIN CLEARANCE

Flight Levels assigned by a radar controller to pilots will provide a minimum terrain clearance according to the phase of flight.

1.6.1.5 RADAR AND RADIO FAILURE PROCEDURES

1.6.1.5.1 Radar failure

In the event of radar failure or loss of radar identification, instructions will be issued to restore non - radar standard separation and the pilot will be instructed to communicate with the parent ATS unit.

1.6.1.5.2 Radio failure

1.6.1.5.2.1 The radar controller will establish whether the aircraft radio receiver is working by instructing the pilot to operate the SSR transponder (see also **GEN 1.5**) or, if the aircraft is not SSR equipped, to carry out a turn. If appropriate actions are observed the radar controller will continue to provide radar services to the aircraft.

1.6.1.5.2.2 Aircraft unable to receive radio transmissions shall comply with the ICAO radio communication failure procedures as detailed in Annex 2 para 3.6.5. If radar identification was established prior to radio failure the radar controller will vector other identified aircraft clear of the radio failure aircraft until such time as the aircraft leaves radar coverage or has landed.

1.6.1.5.2.3 Flights departing from BAHRAIN INTERNATIONAL airport on a radar clearance and experiencing a total radio communication failure shall carry out the following procedures:

IN VMC:

Continue to fly in VMC and land at the nearest suitable aerodrome.

In IMC:

Maintain last assigned heading and flight level or altitude for a period of three minutes after departure or to a distance of 12 DME BAH whichever occurs earlier. Thereafter continue according to current flight plan by routing direct to the first en - route reporting point and climbing to the last acknowledged en -route flight level cleared by ATC.

1.6.1.6 AIRBORNE COLLISION AVOIDANCE SYSTEM (ACAS)

All aircraft fitted with ACAS II equipment, shall be fitted with software version 7.1 with mode S transponder compliant with Annex 10, Volume IV within the OB BB EFF 1st Jan 2017.

REF. ICAO DOC 8168 - OPS / 611 VOL. I PART VIII CHAPTER 3

1.6.1.6.1 The information provided by ACAS is intended to assist pilots in the safe operation of aircraft. The traffic alert and collision avoidance system - TCAS II is accepted as a suitable system provided the installation is certified for use by the State of Registry of the aircraft concerned and it's operation is in accordance with instructions for use of the equipment laid down in the company operations manual issued by the aircraft operator.

1.6.1.6.2 Nothing in the following procedures shall prevent pilots - in - command from exercising their best judgement and full authority in the choice of the best course of action to resolve a traffic conflict.

1.6.1.7 USE OF ACAS INDICATIONS

ACAS indications are intended to assist pilots in the active search for, and visual acquisition of, the conflicting traffic and the avoidance of potential collisions. The following safety considerations apply:

- a) Pilots shall not manoeuvre their aircraft in response to traffic advisories only;

Note: Traffic advisories are intended to assist in visual acquisition of conflicting traffic and to alert the pilot to the possibility of a resolution advisory. The restriction in the use of traffic advisories is due to the limited bearing accuracy and to the difficulty in interpreting altitude rate from displayed traffic information.

- b) In the event of a resolution advisory, ATC will expect the pilot to respond. If avoiding action is necessary, alteration of flight path should be limited to the minimum extent necessary to comply with the resolution advisories;
- c) Pilots who deviate from an air traffic control clearance in response to a resolution advisory shall promptly return to the terms of the previous air traffic control instruction or clearance when the conflict is resolved and shall notify the appropriate ATC unit as soon as possible.

INTENTIONALLY BLANK

INTENTIONALLY BLANK

1.6.2 SECONDARY SURVEILLANCE RADAR (SSR)

1.6.2.1 Emergency Procedures

1.6.2.1.1 Except as provided for paragraph **ENR 1.6.2.2** below, pilot shall operate transponders and select modes and codes in accordance with ATC instructions. In particular, when entering BAHRAIN FIR / BAHRAIN UIR pilots who have already received specific instructions from ATC concerning the setting of the transponder shall maintain that setting until otherwise instructed.

1.6.2.1.2 Pilots of aircraft about to enter the BAHRAIN FIR / BAHRAIN UIR who have not received specific instructions from ATC concerning the setting of the transponder shall operate the transponder on Mode A / 3 Code 2000 before entry and maintain that setting until otherwise instructed.

Mode C, if fitted, is to be selected at all times.

1.6.2.1.3 If the pilot of an aircraft encountering a state of emergency has previously been instructed by ATC to operate the transponder on a specific code, this code setting shall be maintained until otherwise advised. In all other circumstances, the transponder shall be set to Mode A / 3 Code 7700.

1.6.2.1.4 Notwithstanding the procedures set out above, a pilot may select Mode A / 3 Code 7700 whenever the nature of the emergency is such that this appears to him to be the most suitable course of action.

Note: Continuous monitoring of responses on Mode A / 3 Code 7700 is provided.

1.6.2.2 Radio communication failure and unlawful interference procedures

1.6.2.2.1 Radio Communication failure procedures

In the event of an aircraft radio receiver failure, a pilot shall select Mode A / 3 Code 7600 and follow established procedures, and subsequent control of aircraft will be based on these procedures.

1.6.2.2.2 Unlawful Interference procedure

Pilots of aircraft in flight subjected to unlawful interference shall endeavour to set the transponder to Mode A Code 7500 to give indication of the situation, unless circumstances warrant the use of A / 3 Code 7700.

Note: Continuous monitoring in responses on Mode A / 3 Code 7500 is provided.

1.6.2.3 System of SSR Code assignment

Codes are assigned according to the ICAO "ORIGINATING REGION CODE ALLOCATION METHOD2 - ORCAM - for the MID / ASIA Region.

1.6.2.4 Mode S operation within OBBS FIR

1.6.2.4.1 INTRODUCTION

The provision of air traffic services (ATS) using SSR Mode S in Bahrain FIR airspace will rely on a unique ICAO 24-bit aircraft address for selective interrogation of individual aircraft. The 24-bit aircraft address is also an essential element of the airborne collision avoidance system (ACAS II). In addition, Mode S surveillance requires the reporting of aircraft identification as stated below.

Pilots of aircraft equipped with mode 'S' transponder having an aircraft identification feature shall set the aircraft identification in the transponder while operating within OBBS FIR. This setting shall correspond to the aircraft identification specified in item 7 of the standard ICAO FPL, or if no FPL has been filed, the aircraft registration. ATC equipment requires strict compliance with mode 'S' settings to ensure proper radar tracking. Inability to comply with these requirements may result in aircraft being denied entry into OBBS class 'A' airspace.

The aircraft address shall be one of 16 777 214 twenty-four-bit aircraft addresses allocated by ICAO to the State of Registry or common mark registering authority and assigned as prescribed in the ICAO Annex 10.

All Mode S equipped aircraft engaged in international civil aviation are required to have an aircraft identification feature as prescribed in ICAO Annex 10.

This guidance is provided to ensure consistency regarding 24-bit aircraft addresses and the reporting of aircraft identification relevant to the operational introduction of Mode S Elementary and Enhanced Surveillance. In particular:

1. Adherence to the world-wide scheme for assignment of ICAO 24-bit Aircraft Addresses.
2. Correct setting of Aircraft Identification by flight crew.

1.6.2.4.2 THE ICAO 24-BIT AIRCRAFT ADDRESS

Instances occur of incorrect 24-bit aircraft addresses being installed/hard-wired on individual aircraft. This has happened not only on first installation of Mode S transponder but also when a major modification has been made to the Mode S equipment, and following a change of State of Registration. Incorrect installation, such as setting the address to all zeros, or, inadvertent duplication of an address can pose a severe risk to flight safety. In particular, the airborne collision avoidance system (ACAS II), performs on the assumption that only a single, unique 24-bit aircraft address per airframe exists. The performance of ACAS II can be seriously degraded and in some instances disabled if an incorrect

or duplicate address is installed on an aircraft. Incorrect or duplicated 24-bit aircraft addresses will also undermine the effectiveness of surveillance services based on SSR Mode S.

It is essential that aircraft operators comply with the aircraft address assignment procedures of the state regulatory authority to which blocks of addresses have been allocated by ICAO.

Note: *Telephony designators for aircraft operating agencies are contained in ICAO Doc 8585.*

The world-wide addressing scheme has been designed so that, at any one time, no address is assigned to more than one aircraft. Only one address can be assigned to an aircraft and it can not be changed except under exceptional circumstances authorised by the State Regulatory Authority concerned.

When an aircraft changes its State of Regulatory of Registry, the previously assigned address is to be relinquished and a new address assigned by the new registering authority.

It is essential that the aircraft address is periodically verified using ramp tests. Such checks must also be conducted when a major maintenance check has taken place and when the aircraft has changed registration, to ensure that a newly assigned address has been properly set.

1.6.2.4.3 CORRECT SETTING OF AIRCRAFT IDENTIFICATION

To comply with airborne equipment requirements, Mode S transponder equipped aircraft must incorporate an Aircraft Identification Feature. Correct setting of aircraft identification is essential for the correlation of radar tracks with flight plan data in the ATM and Airport Operator ground systems. Initial operational trials using SSR Mode S have shown that many aircraft are transmitting incorrect aircraft identification, e.g. J9165 instead of JZR165. Such erroneous settings of aircraft identification prohibit automatic flight plan correlation and, if perpetuated, will severely limit the effectiveness of Mode S to relieve the shortage of SSR codes.

In accordance with ICAO Doc 8168 [PANS-OPS] Vol. I, Part III, flight crew of aircraft equipped with Mode S having an aircraft identification feature shall set the aircraft identification in the transponder. The setting shall correspond to the aircraft identification specified in item 7 of the ICAO flight plan, or, if no flight plan has been filed, the aircraft registration.

Note: *All Mode S equipped aircraft engaged in international civil aviation are required to have an aircraft identification feature.*

Note: *No zeroes, dashes or spaces are to be added when the aircraft identification consists of less than 7 characters.*

Mode (S) and Selected Altitude use in the OBBB FIR

The provision of the selected altitude set by aircrew, to the controller, gives them the ability to intervene, where the selected altitude does not match the clearance. This greatly reduces the chance of a Level Bust.

Selected altitude data is presented as either a flight level or an altitude, depending on surveillance system settings. For ATC and Air-Ground Communication purposes, the generic phrase 'Selected level' is often used to encompass data presented as either an altitude or flight level.

The following factors are preventable, using the display of a Selected Altitude / CFL mismatch:

- *Correct pilot Read-back or Hear-back followed by incorrect action;*
- *Incorrect pilot read-back by correct aircraft;*
- *Pilot read-back by incorrect aircraft.*

The ATM System will generate an alert where there is a discrepancy between the Cleared Level and the aircraft Selected Altitude; Controllers are required to advise the pilot using the following phrase: "(Callsign), Check Selected Level. Cleared Level is (correct cleared level)"

Pilots of Mode (S) equipped aircraft, operating within the OBBB FIR shall ensure that their current cleared level is set as the selected altitude in the aircraft mode control panel, unless established on final approach for OBBI.

Any failure to comply with the above, pilots shall immediately inform ATC.

INTENTIONALLY BLANK

ENR 1.7 ALTIMETER SETTING PROCEDURES**1.7.1 INTRODUCTION**

The Altimeter setting procedures in use generally conform to those contained in ICAO Doc 8168 - OPS, / 611 Volume 1 and DOC 7030, and are given in full below. QNH reports and temperature information for use in determining adequate terrain clearance are provided in MET broadcasts, and are available on request from Air Traffic Services Units. QNH values are given in whole hectopascals.

1.7.2 BASIC ALTIMETER SETTING PROCEDURES**1.7.2.1 General**

1.7.2.1.1 The Transition Altitude is fixed at 13000 FT AMSL for the entire BAHRAIN FIR. The Transition level is fixed at FL 150 for the entire BAHRAIN FIR / BAHRAIN UIR.

1.7.2.1.2 Vertical displacement of aircraft at or below the Transition Altitude is expressed in terms of altitude. Vertical displacement of aircraft at or above the Transition Level is expressed in terms of Flight Levels. While an aircraft is passing through the Transition Layer, vertical displacement is expressed as altitude when descending, and as Flight Levels when climbing.

1.7.2.1.3 Flight Level Zero is located at the atmospheric pressure level of 1013.2 HPA (29.92"). Consecutive Flights are separated by a pressure interval corresponding to 500 FT in the Standard Atmosphere below FL 290, and by a pressure interval corresponding to 1000 FT above FL 290. Simultaneous flight at both the Transitional Altitude and the Transition Level is permissible as a minimum of 1000 FT separation exists between the two layers, however, level flight within the Transition Layer is not permitted.

1.7.2.2 Take - off and climb

1.7.2.2.1 A QNH altimeter setting is made available to aircraft in the routine take - off and climb instructions.

1.7.2.2.2 Vertical displacement of aircraft during the climb is controlled by reference to altitudes until reaching the Transition Altitude, above which vertical displacement is controlled by reference to Flight Levels. In this context, the word "controlled" is used in a composite sense in that a pilot will wish to fly his aircraft at predetermined Flight Levels or altitudes, and Air Traffic Services will wish to advise the pilot of the availability of Flight Levels and altitudes. Both are concerned with the vertical position of aircraft.

1.7.2.3 En - route at and below the transition altitude - altimeter pressure setting

BAHRAIN INTERNATIONAL airport QNH

1.7.2.4 Vertical separation - En-route

1.7.2.4.1 Aircraft shall be flown En-route at Flight Levels at all times when above 13000 FT AMSL.

1.7.2.4.2 When complying with the semi-circular system of cruising levels of Annex 2, an aircraft shall be flown at Flight Levels or Flight Altitudes corresponding to the magnetic track as shown in the following table:

Magnetic Track	000° - 179°		180° - 359°	
	IFR	VFR	IFR	VFR
Flight Altitudes		1500	2000	2500
	3000	3500	4000	4500
	5000	5500	6000	6500
	Up to 13000	Up to 11500	Up to 12000	Up to 12500
Flight Levels	150		160	
	170		180	
	190		200	
	Up to 290		Up to 280	
	310		300	
	330		320	
	350		340	
	370		360	
	390		380	

Magnetic Track	000° - 179°		180° - 359°	
Flight Rules	IFR	VFR	IFR	VFR
	etc		etc	

1.7.2.5 Approach and landing

1.7.2.5.1 A QNH altimeter setting is made available in the routine approach and landing instructions.

1.7.2.5.2 Vertical displacement of aircraft during approach is controlled by reference to Flight Levels until reaching the Transition Level, below which vertical displacement is controlled by reference to altitudes.

Note: This does not preclude a pilot from using a QFE setting to terrain clearance purposes during the final approach of the runway.

1.7.2.6 Missed approach

The relevant portions of **ENR 1.7.2.1**, **ENR 1.7.2.2** and **ENR 1.7.2.5** shall be applied to the case of a missed approach..

1.7.3 DESCRIPTION OF ALTIMETER SETTING REGION

There is a single altimeter pressure setting region which covers the entire BAHRAIN FIR / BAHRAIN UIR, however see **ENR 1.7.2.2.2**.

1.7.4 PROCEDURES APPLICABLE TO OPERATORS, INCLUDING PILOTS

The levels at which flight is to be conducted shall be specified in a Flight Plan;

- in terms of Flight Levels, if the flight is to be conducted at or above the Transition Level, and
- in terms of altitudes of the flight is to be conducted in the vicinity of an aerodrome, and at or below the Transition Altitude.

Note: Short flights in the vicinity of an aerodrome may often be conducted only at altitudes below the Transition Altitude.

Note: Flight Levels are specified in a plan by number; and not in terms of feet as is the case with altitudes.

1.7.5 TABLE OF CRUISING LEVELS

TRACK											
From 000° to 179°						From 180° to 359°					
IFR Flights			VFR Flights			IFR Flights			VFR Flights

ENR 1.8 REGIONAL SUPPLEMENTARY PROCEDURES (DOC 7030 / 5)

The Supplementary Procedures in force, directly applicable to aircraft are given in their entirety. Differences are printed in heavy face italic type.

DOC 7030 part 1

Reference Procedure**1.1 Visual Flight Rules (VFR)**

(Annex 2 - 4.6)

VFR flights to be operated within a control zone established at an aerodrome serving International Flights and in specific portions of the associated terminal control area shall:

1. have two - way radio communications;
2. obtain clearance from the appropriate air traffic control unit; and
3. report position as required

Note: *The phrase "specified portions of the associated terminal control area" is intended to signify at least those portions of the TMA used by International IFR Flights in association with approach, holding, departure and noise abatement procedures.*

1.2.1.1 Instrument Flight Rules (IFR)

(Annex 2 - 2.2. and Chapter 5)

Flights shall be conducted in accordance with the Instrument Flight Rules (even when not operating in instrument meteorological conditions) when operated:

1. more than 100 NM seaward from the shoreline within controlled airspace; or
2. at or above Flight Level 150

3.0 A / G communications and in - flight reporting

(ANNEX 2 -3 6.3, 3.6.5, and 5.3.3 and PANS ATM / 501 Chapter 4, 4 - 11)

All aircraft on VFR flights, and aircraft on IFR flights outside controlled airspace, shall maintain a watch on a radio station furnishing communications for the unit providing flight information service in the flight information region and file with that station information as their position unless otherwise authorized by the State overflown.

Reference Procedure

3.4.1.2 The aircraft call sign / identification shall be transmitted immediately before or after the word "position".

3.4.1.3 The position of the aircraft shall be transmitted in reference to a reporting point name, name code designator or, if not named:

1. for flights operating in a predominantly east - west direction:
 - a) latitude in degrees and minutes; and
 - b) longitude in degrees only;
2. for flights operating in a predominantly north - south direction:
 - a) latitude in degrees only; and
 - b) longitude in degrees and minutes.

3.4.1.4 The time at which the aircraft is over the reporting point shall be transmitted in four digits, giving both the hour and the minutes.

3.4.1.5 The altitude / flight level of the aircraft shall be included in the position report.

3.4.2.1 Next position and time shall normally be expressed as the reporting point name, name - code designator or latitude and longitude as indicated in 3.4.1.3.

3.4.2.2 Estimated time over the next position shall be expressed in four digits.

3.4.3.1 Ensuing position information shall include the name, name - code designator or coordinates of the next succeeding reporting point, whether compulsory or not.

4.0 Special Procedures for in - flight contingencies**General Procedures**

The following general procedures apply to both subsonic and supersonic aircraft

4.2.1 If an aircraft is unable to continue flight in accordance with its Air Traffic Control Clearance, a revised Clearance shall be obtained at the earliest possible time and, in the meantime, the aircraft shall broadcast position (including ATS route designator or the track code, as appropriate) and intentions, on frequency 121.500 MHZ at suitable intervals until Air Traffic Control Clearance is received.

12.1.1 Alerting and Search and Rescue Services - Routes and equipment of Private Aircraft

Annex 6 - part II - 6.3 and 6.4):

General Aviation aircraft operating over designated areas, land or sea, where search and rescue operations would be difficult, should:

1. carry appropriate survival equipment;
2. follow the routes or specified procedures if not equipped with two - way radio except that under special circumstances, the appropriate authority may grant specific exemptions from this requirement.

Reference Procedure

12.2 Alerting Services

(PANS ATM / 501 Chapter 9 & Chapter 10, 10 - 2)

The procedures for "Alerting Service" detailed in PANS RAC, Part V1.2 are applicable to all flights except those conducted wholly in the vicinity of an aerodrome when exempted by the appropriate air traffic control unit.

DOC 7030 / 4, Part 2

Reference Procedure

1.0 AERONAUTICAL MOBILE SERVICE

1.1 Languages to be used in radiotelephony

(A10, Vol. 11, 5.2.1.1.2, Note 2)

1.1.1 English is used in radiotelephony

2.0 AERONAUTICAL FIXED SERVICE

2.1 Priority of MOTNE messages on AFTN

NIL

3.0 RADIO FREQUENCIES

3.1 Air - to - air channel

(A10, Vol. 1, Part 11 - 4.1.3.2)

3.1.1 The frequency 123.450 MHZ has been approved for use as the air - to - air channel to enable aircraft engaged in flights over remote and oceanic areas out of range of VHF ground stations to exchange necessary operational information and to facilitate the resolution of operational problems.

DOC 7030 / 4, Part 3

1.1 Aircraft observations and Reports

(Annex 3 - Chapter 5)

Aircraft within the BAHRAIN FIR / BAHRAIN UIR shall make and record routing observations at the ATS / MET reporting points indicated in the Regional Plan.

Regional Supplementary Procedures

DOC 7030 / 4

The Supplementary Procedures in force, directly applicable to ATSUs and indirectly applicable to aircraft, are not given in their entirety. The relevant differences are given but only differences from ICAO have been published in full.

Reference Differences

NIL

ENR 1.9 AIR TRAFFIC FLOW MANAGEMENT (ATFM) AND AIRSPACE MANAGEMENT**1.9.1 Air traffic flow management structure, service area, service provided location of unit and hours of operation****Service provided**

Within the BAHRAIN FIR / BAHRAIN UIR there is no requirement for Strategic Flow Management at present, or in the foreseeable future, and the establishment of a Regional Flow Management Unit is perceived as not being necessary. Tactical Flow Management is implemented from time to time, as required.

INTENTIONALLY BLANK

ENR 1.10 FLIGHT PLANNING

(Restriction, Limitation or advisory Information)

1.10.1 PROCEDURES FOR THE SUBMISSION OF A FLIGHT PLAN

A flight plan shall be submitted in accordance with Annex 2, para 3.3.1 prior to operating:

- a) any IFR flight,
- b) any VFR flight.
 - i. departing from or destined for an aerodrome within a CTR;
 - ii. crossing any CTR within BAHRAIN FIR;
 - iii. across any International State Boundary or the FIR / UIR boundary.

Time of submission

Except for repetitive flight plans, a flight plan shall be submitted at least 60 minutes prior to departure, taking into account requirements for timely information of ATS units in airspace along the route to be flown, including requirements for early submission for ATS Air Traffic Flow Management (ATFM) purposes.

Place of submission

- a) Flight plans shall be submitted at the Air Traffic Services Reporting Office (ARO) at the departure aerodrome.
- b) In absence of such office at the departure aerodrome, a flight plan shall be submitted by telephone, telefax or teletype to the nearest ARO as listed below, (except as indicated under c.). An acknowledgement of receipt must be obtained prior to departure when using telefax or teletype.

BAHRAIN ARO

TEL: +973 17321181 / +973 17321182

Telefax: +973 17323876

- c) For domestic flights from an uncontrolled to a controlled aerodrome a flight plan shall be submitted by telephone to the ARO at destination.

VFR flight plan for alerting service only

Alerting service in principle provided to flights for which a flight plan has been submitted.

Contents and form of flight plan

- a) ICAO flight plan forms are available at ARO's and airport offices at uncontrolled aerodromes. The instructions for completing those forms shall be complied with.
- b) Flight plans concerning IFR flights and international VFR flights shall include FIR / UIR boundary estimates.
- c) When a flight plan is submitted by telephone, teletype or telefax, the sequence of items of the flight plan - form shall be strictly adhered to.

Adherence to ATS route structure

No flight plans shall be filed for routes deviating from the published ATS route structure, unless prior permission has been obtained from BAHRAIN ACC.

Authorization for special flights

Flights of a specific character such as survey flights, scientific research flights etc. may be exempted from the restriction specified above.

Request for exemption shall be mailed so as to be received at least one week before the intended day of operation to:

Undersecretary for Civil Aviation
 Bahrain Civil Aviation Affairs
 P.O. Box 586
 Kingdom of Bahrain

1.10.2 REPETITIVE FLIGHT PLAN SYSTEM*General*

The procedures concerning the use of Repetitive Flight Plans (RPL) conform to ICAO Document 7030 and PANS RAC 12th edition. Except where indicated hereunder.

REPETITIVE FLIGHT PLANS / FLIGHT SCHEDULE DATA LISTS

Pending full implementation of the RPL concept, RPLs are transmitted on the AFTN as if they were Filed Flight Plans.

- 1.10.2.1 Operators are required to provide advance details of Season Scheduled Services operating within the BAHRAIN FIR / BAHRAIN

UIR at least 14 days in advance of implementation or change, to the Flight Data Processing Unit (FDPU).

The Flight Data Processing Unit
Aeronautical Information Services Office
P.O. Box 586
Kingdom of Bahrain

Note: The submission of such details to Air Traffic Control does not constitute a request for approval of flight schedules.

1.10.2.1.1 This Data is required to be presented, on separate sheet for each 12 hours UTC of each day, in the format shown in the "REPETITIVE FLIGHT PLAN LISTING".

Note: There is a requirement to indicate in Column Q for all flights the Entry point Designator for BAHRAIN FIR / BAHRAIN UIR with EST (UTC).

1.10.2.1.2 Incidental changes and cancellations of RPL

Incidental changes to and cancellations of RPL relating to departures from BAHRAIN INTERNATIONAL airport shall be notified as early as possible and not later than 30 minutes before departure to:

BAHRAIN ARO
TEL: +973 17321181 / +973 17321182 for departures from BAHRAIN INTERNATIONAL airport.

RPL Lists shall be replaced in their entirety by new lists prior to the instruction of the summer and winter schedules.

1.10.2.1.3 Delay

When a specific flight is likely to encounter a delay of one hour or more in excess of the departure time stated in the RPL, the ATS unit serving the departure aerodrome shall be notified immediately.

Note: Failure to comply with this procedure may result in the automatic cancellation of the RPL for that specific at one or more of the ATS unit concerned.

1.10.2.1.4 ATS messages

For a flight operated on a RPL, a flight plan message (FPL) will be transmitted pending full implementation of the RPL concept in the region. Departure messages (DEP) or Delay messages (DLA) relating to such flights will also be transmitted to appropriate ATS units.

1.10.2.2 FLIGHT PLANS

1.10.2.2.1 Scheduled Flights departing from airfields in the FIR

1.10.2.2.2 Standard Flight Plans for flights must be filed with the Aerodrome / Heliport AIS Unit at the aerodrome of departure, or

1.10.2.2.3 Alternatively, by direct arrangement between the operator and the local ATC Unit involved, a Standard ICAO Flight Plan may be stored at the aerodrome of departure and activated by that unit at 0001 UTC on the day of operation.

1.10.2.3 CHANGES TO FLIGHT DETAILS

1.10.2.3.1 Permanent Changes

Changes of permanent nature to any of the details previously supplied (under **ENR 1.10.2.2.1** and **ENR 1.10.2.2.2** above) require that complete details must be advised, both to the FDPU at Bahrain and to any other aerodrome concerned within the FIR, either by a completely new replacement plan, or by clear "insert / delete" editing instructions.

1.10.2.3.2 Temporary Changes

1.10.2.3.2.1 Extra flights require submission of both

- a standard Flight Plan, and
- Flight Data details to BAHRAIN FDPU.

1.10.2.3.2.2 Replacement flights, (i.e. Flights with temporary changes to details which have been submitted under **ENR 1.10.2.1.1** and **ENR 1.10.2.2.2** above) require a Standard Flight Plan clearly annotated in item 12 "Replacement of Scheduled Flight (c / s) of ... (date)";

Note: Flight Schedule Data Lists are required by ATSUs to prepare Air Traffic Control Data Systems in advance, thus reducing the possibility of traffic delay resulting from work - load in peak periods. Timely provision of Scheduled Flight Data, preferably more than the prescribed 14 days in advance, is therefore in the best interests of operators of scheduled air transport.

1.10.2.4 FLIGHT PLAN FORM

1.10.2.4.1 The Flight Plan Form must be completed according to the instructions contained in Doc 4444 - ATM 501, Appendix 2.

1.10.2.4.2 The following options are REQUIRED by the ATS authority for all flight operating within the BAHRAIN FIR / BAHRAIN UIR:

1.10.2.4.2.1 **Flight Plan ITEM 8 - The second field letter denoting the TYPE OF FLIGHT.**

1.10.2.4.2.2 **Flight Plan ITEM 18 - The indicator "EET / " followed by FIR / UIR boundary designators and accumulated elapsed times as follows:**

- a) Flight entering the BAHRAIN FIR: The location indicator for the BAHRAIN FIR together with the accumulated estimated time since departure (e.g. EET / OBBB 0345).
- b) Flights departing from the BAHRAIN FIR: All boundary designators together with the corresponding estimated elapsed times to those points (e.g. for a flight from OBBI to EGLL, EET / OEJD 0005, OJAC 0125, OSTT 0145, LCCC 0210, LGGG 0245, LTBB 0300, LYBA 0420, LOVV 0450, EDDU 0510, EBUR 0545, EHAA 0600, EGTT 0615).

1.10.2.4.2.3 **Flight Plan ITEM 18 - The indicator "SEL / " followed by the SELCAL code.**

1.10.2.4.2.4 **Flight Plan ITEM 19 - To be completed in full.**

1.10.3 CHANGE TO THE SUBMITTED FLIGHT PLAN

All changes to a flight plan submitted for an IFR flight or a controlled VFR flight and significant changes to a flight plan submitted for an uncontrolled VFR flight shall be reported as soon as possible to the appropriate ATS unit.

1.10.3.1 In the event of a delay in departure of 30 minutes or more for a flight for which a flight plan has been submitted, the flight plan shall be amended or a new flight plan shall be submitted after the old plan has been cancelled.

Note 1: If a delay in departure of a controlled flight is not properly reported, the relevant flight plan date may no longer be readily available to the appropriate ATS unit when a clearance is ultimately requested, which will consequently result in extra delay for the flight.

Note 2: If a delay in departure (or cancellation) of an uncontrolled VFR flight is not properly reported, alerting or search and rescue action may be unnecessarily initiated, when the flight fails to arrive at the destination aerodrome within 30 minutes after current ETA.

1.10.3.2 Whenever a flight, for which a flight plan has been submitted, is cancelled, the appropriate ATS unit shall be informed immediately.

Changes to a current flight plan for a controlled flight during flight shall be reported or requested subject to the provisions in Annex 2.3.6.2 (Adherence to flight plan).

Significant changes to a flight plan for an uncontrolled VFR flight include changes in endurance, or total number of persons on board and changes in time estimates of 30 minutes or more.

1.10.3.3 Arrival report (Closing a flight plan)

A report of arrival shall be made at the earliest possible moment after landing to the airport office of the arrival aerodrome by any flight for which a flight plan has been submitted except when the arrival has been acknowledged by the local ATS unit.

After landing at an aerodrome which is not the destination aerodrome (diversionary landing) the local ATS unit shall be specifically informed accordingly.

In the absence of a local ATS unit at the aerodrome of diversionary landing the pilot is responsible for passing the arrival report to the destination aerodrome.

- aircraft identification
- departure aerodrome
- destination aerodrome
- time of arrival

In the case of diversion, insert between "destination aerodrome" an "time of arrival":

- the "arrival aerodrome"

INTENTIONALLY BLANK

[illegible]

Additional Information Required :-
BAHRAIN FIR Entry point with EST (UTC).

INTENTIONALLY BLANK

1.10.4 ADDITIONAL REQUIREMENTS RELATED TO RVSM AIRSPACE

Note: *Flights will not be given access to BAHRAIN RVSM airspace when:*

- a) *No flight plan has been received, or*
- b) *A flight plan has been received but the required RVSM data has not been included in the flight plan.*

1.10.4.1 Except as indicated in **ENR 1.10.4.3** flight between FL 290 to FL 410 is for exclusive use of RVSM approved aircraft. Non - RVSM certified aircraft shall flight plan accordingly.

1.10.4.2 Operators of RVSM certified aircraft shall insert the letter "W" in item 10 of the flight plan regardless of the requested level.

1.10.4.3 Acceptance of non - RVSM certified State aircraft for flight at RVSM levels is subject to prevailing traffic conditions. RVSM certified aircraft will be offered priority in order to make maximum use of airspace capacity.

Note: *Consequently, operators of State aircraft intending to navigate within BAHRAIN FIR / BAHRAIN UIR are advised to dispatch RVSM certified aircraft or flight plan at non - RVSM levels.*

1.10.4.4 Operators of non - RVSM certified State aircraft requesting a flight level within RVSM airspace shall insert the phrase "STS / NONRVSM" in item 18 of the flight plan.

1.10.4.5 In addition to the requirements of **ENR 1.10.4.4** operators of non - RVSM certified State aircraft requesting to operate in RVSM airspace shall include the letter "M" in item 8 of the flight plan.

1.10.4.6 The flight plan for an aircraft intending to operate across or within the lateral limits of RVSM airspace shall include:

- a) The entry point and requested flight level for that portion of the route commencing immediately after the entry point.
- b) The exit point and requested flight level for that portion of the route commencing immediately after the exit point.

INTENTIONALLY BLANK

ENR 1.11 ADDRESSING OF FLIGHT PLAN MESSAGES

Flight movement messages relating to traffic into or via BAHRAIN FIR / BAHRAIN UIR shall be addressed as stated below in order to warrant correct relay and delivery.

Note: *Flight movement messages in this context comprise flight plan messages, amendment messages relating thereto and flight plan cancellation messages. ICAO ATM - DOC 4444, chapter 11 para. 11.2.1.1.3 refers.*

1.11.1 AFTN ADDRESSES**1.11.1.1** Category of flight (IFR, VFR or both)

All Flight Plans and Departures messages for flights operating through or within the BAHRAIN FIR / BAHRAIN UIR must include addressees **OBBBZQZX**.

1.11.1.2 All aircraft operators intending to use BAHRAIN INTERNATIONAL airport as a departure aerodrome must include the addressees **OBBIZPZX** in their flight plan.

1.11.1.3 BAHRAIN / SAKHIR AIRBASE installed new AFTN addresses necessary for flight planning purposes and other relevant issues as follows: OBKHZTZX for Control Tower, OBKHZPZX for AIS / COMMS and OBKHIFYX for Service Address.

INTENTIONALLY BLANK

ENR 1.12 INTERCEPTION OF CIVIL AIRCRAFT

1.12.1 Interception procedures

All unknown aircraft within the airspace over territories and territorial waters of states within the BAHRAIN FIR / BAHRAIN UIR may be intercepted by air defense fighters by day and by night.

1.12.2 Applicability

1.12.2.1 The procedures and signals set out in this section apply in the event of an interception over the territory and territorial waters of the Kingdom of Bahrain.

1.12.2.2 An aircraft which is intercepted by another aircraft is required immediately to:

- a) follow the instructions given by the intercepting aircraft, interpreting and responding to the signals given under **ENR 1.12.3**;
- b) notify, if possible, the Air Traffic Services Unit responsible for the airspace in which the aircraft is flying;
- c) make a general call on the emergency frequency 121.500 MHZ to attempt to establish radio communication with the intercepting aircraft or with the intercept control unit, giving the identity and position of the aircraft and the nature of the flight. This call should be repeated on 243.000 MHZ if necessary and practicable;
- d) if equipped with SSR transponder, select Mode A Code 7700, unless otherwise instructed by the appropriate Air Traffic Services Unit.

1.12.2.3 If any instructions received by radio from any sources conflict with those given by the intercepting aircraft by visual signals, the intercepted aircraft is required to request immediate clarification while continuing to comply with the visual instructions given by the intercepting aircraft.

1.12.2.4 If any instructions received by radio from any sources conflict with those given by the intercepting aircraft by radio, the intercepted aircraft is required to request immediate clarification while continuing to comply with the radio instructions given by the intercepting aircraft.

1.12.2.5 All aircraft shall, at all times, remain well clear from areas being published as prohibited areas, however, if an aircraft was so compelled to enter a prohibited area due to weather avoidance or otherwise track deviation from the intended route, which would finally take the aircraft into prohibited areas, was observed and such initiative was made by the pilot without obtaining a specific approval from ATC to carry out the manoeuvre, then this particular flight may expect an interception by military jets by the ROYAL BAHRAIN AIR FORCE during which full compliance to the instructions issued by the interceptors must be immediately adhered to.

1.12.2.6 If radio contact is established during interception but communication in a common language is not possible, attempts shall be made to convey instructions, acknowledgement of instructions and essential information by using the phrases and pronunciations in the following table and transmitting each phrase twice:

Phrases for use by INTERCEPTING aircraft		
Phrase	Pronunciation ¹	Meaning
CALL SIGN	KOL SA - IN	What is your call sign?
FOLLOW	FOL - LO	Follow me
DESCEND	DEE - SEND	Descend for landing
YOU LAND	YOU LAAND	Land at this aerodrome
PROCEED	PRO - SEED	You may proceed
¹ Syllables to be emphasized are printed in bold letters.		

Phrases for use by INTERCEPTED aircraft		
Phrase	Pronunciation ¹	Meaning
CALL SIGN ²	KOL SA - IN	My call sign is (call sign)
WILCO	VILL - KO	Understood. Will comply.
CAN NOT	KANN - NOTT	Unable to comply
REPEAT	REE - PEET	Repeat your instruction
AM LOST	AM - LOSST	Position unknown
MAYDAY	MAYDAY	I am in distress
HIJACK ³	HI - JACK	I have been hijacked
LAND (place name)	LAAND (place name)	I request to land at (place name)

DESCEND	DEE - SEND	I required descent
¹ Syllables to be emphasized are printed in bold letters.		
² The call sign required to be given is that used in radio telephony communications with air traffic services units and corresponding to the aircraft's identification in the flight plan.		
³ Circumstances may not always permit, nor make desirable, the use of the phrase "HIJACK"		

1.12.3 TABLES OF VISUAL SIGNALS FOR USE IN THE EVENT OF INTERCEPTION**1.12.3.1 Signals initiated by INTERCEPTING aircraft and responses by INTERCEPTED aircraft**

Series	INTERCEPTING Aircraft Signals	Meaning	INTERCEPTED Aircraft Responds	Meaning
1	DAY or NIGHT - Rocking aircraft and flashing navigational lights at irregular intervals (and landing lights in the case of a helicopter) from a position slightly above and ahead of, and normally to the left of, the intercepted aircraft (or to the right if the intercepted aircraft is a helicopter) and, after acknowledgement, a slow level turn, normally to the left, (or to the right in case of a helicopter) on the desired heading. Note 1: - Meteorological conditions or terrain may require the intercepting aircraft to reverse the positions and direction of turn given above in Series 1. Note 2: - If the intercepted aircraft is not able to keep pace with the intercepting aircraft, the latter is expected to fly a series of racetrack patterns and to rock the aircraft each time it passes the intercepted aircraft.	You have been intercepted. Follow me.	DAY or NIGHT - Rocking aircraft, flashing navigational lights at irregular intervals and following. Note: - Additional action required to be taken by intercepted aircraft is prescribed on ENR 1.12.2.6.	Understood, will comply.
2	DAY or NIGHT - An abrupt breakaway manoeuvre from the intercepted aircraft consisting of a climbing turn of 90 degrees or more without crossing the line of the flight of the intercepted aircraft.	You may proceed.	DAY or NIGHT - Rocking the aircraft.	Understood, will comply.
3	DAY or NIGHT - Lowering landing gear (if fitted), showing steady landing lights and overflying the runway in use or, if the intercepted aircraft is a helicopter, overflying the helicopter landing area. In the case of helicopters, the intercepted helicopter makes a landing approach, coming to hover near to the landing area.	Land at this aerodrome.	DAY or NIGHT - Lowering landing gear, (if fitted), showing steady landing lights and following the intercepting aircraft and, if, after overflying the runway in use or helicopter landing area, landing is considered safe, proceeding to land.	Understood will comply.

1.12.3.2 Signals initiated by INTERCEPTED aircraft and responses by INTERCEPTING aircraft

Series	INTERCEPTED Aircraft Signals	Meaning	INTERCEPTING Aircraft Responds	Meaning
1	DAY or NIGHT - Raising landing gear (if fitted) and flashing landing lights while passing over runway in use or helicopter landing area at a height exceeding 300 M (1000 FT) but not exceeding 600 M (2000 FT) in the case of a helicopter, at a height exceeding 100 M (350 FT) above the aerodrome level, and continuing to circle the runway in use or helicopter landing area. If unable to flash landing lights, flash any other lights available.	Aerodrome you have designated is inadequate.	DAY or NIGHT - If it is desired that the intercepted aircraft follow the intercepting aircraft to an alternate aerodrome, the intercepting aircraft raises its landing gear (if fitted) and uses the Series 1 signals prescribed for intercepting aircraft. If it is decided to release the intercepted aircraft, the intercepting aircraft uses the Series 2 signals prescribed for intercepting aircraft.	Understood, follow me. Understood, you may proceed.
2	DAY or NIGHT - Regular switching on and off of all available lights but in such a manner as to be distinct from flashing lights.	Cannot comply.	DAY or NIGHT - Use Series 2 signals prescribed for intercepting aircraft.	Understood.
3	DAY or NIGHT - Irregular flashing of all available lights.	In distress.	DAY or NIGHT - Use Series 2 signals prescribed for intercepting aircraft.	Understood.

INTENTIONALLY BLANK

ENR 1.13 UNLAWFUL INTERFERENCE**1.13.1 General**

The following procedures are intended for use by aircraft when unlawful interference occurs and the aircraft is unable to notify an ATS unit of this fact.

1.13.2 Procedures

1.13.2.1 Unless considerations aboard the aircraft dictate otherwise, the pilot - in - command should attempt to continue flying on the assigned track and the assigned cruising level at least until able to notify an ATS unit or within radar coverage.

1.13.2.2 When an aircraft subjected to an act of unlawful interference must depart from its assigned track or its assigned cruising level without being able to make radiotelephony contact with ATS, the pilot - in - command should, whenever possible:

- a) attempt to broadcast warnings on the VHF emergency frequency and other appropriate frequencies, unless considerations aboard the aircraft dictate otherwise. Other equipment such as on - board transponders, data links, etc. should also be used when it is advantageous to do so and circumstances permit; and
- b) Proceed in accordance with applicable special procedures for in - flight contingencies, where such procedures have been established and promulgated in Doc 7030 - Regional Supplementary Procedures; or
- c) If no applicable regional procedures have been established, proceed at a level which differs from the cruising levels normally used for IFR flight:
 - 1. 150 M (500 FT) in an area where a vertical separation minimum of 300 M (1000 FT) is applied; or
 - 2. 300 M (1000 FT) in an area where a vertical separation minimum of 600 M (2000 FT) is applied.

INTENTIONALLY BLANK

ENR 1.14 AIR TRAFFIC INCIDENTS

1.14.1 Definition of air traffic incidents

1.14.1.1 "Air traffic incident" is used to mean a serious occurrence related to the provision of air traffic services, such as:

- a) aircraft proximity (AIRPROX);
- b) serious difficulty resulting in a hazard to aircraft caused, for example, by:
 - 1. faulty procedures
 - 2. non-compliance with procedures, or
 - 3. failure of ground facilities.

1.14.1.1.1 Definitions for aircraft proximity and AIRPROX.

Aircraft proximity. A situation in which, in the opinion of the pilot or the air traffic services personnel, the distance between aircraft, as well as their relative positions and speed, have been such that the safety of the aircraft involved may have been compromised. An aircraft proximity is classified as follows:

Risk of collision. The risk classification of aircraft proximity in which serious risk of collision has existed.

Safety not assured. The risk classification of aircraft proximity in which the safety of the aircraft may have been compromised.

No risk of collision. The risk classification of aircraft proximity in which no risk of collision has existed.

Risk not determined. The risk classification of aircraft proximity in which insufficient information was available to determine the risk involved, or inconclusive or conflicting evidence precluded such determination.

AIRPROX. The code word used in an air traffic incident report to designate aircraft proximity.

1.14.1.2 Air traffic incidents are designated and identified in reports as follows:

Type	Designation
Air traffic incident	Incident
as a) above	AIRPROX (Aircraft proximity)
as b) 1) and 2) above	Procedure
as b) 3) above	Facility

1.14.2 Use of the Air Traffic Incident Report Form (See model below)

The Air Traffic Incident Report Form is intended for use:

- a) by a pilot for filing a report on an air traffic incident after arrival or to confirm a report made initially by radio during flight.

Note: The form, if available on board, may also be of use in providing a pattern for making the initial report in flight.

- b) by an ATS unit for recording an air traffic incident report received by radio telephone or teleprinter.

Note: The form may be used as the format for the text of a message to be transmitted over the AFS network.

1.14.3 Reporting procedures (including in-flight procedures)

1.14.3.1 The following are the procedures to be followed by a pilot who is or has been involved in an incident:

- a) during flight, use the appropriate air / ground frequency for reporting an incident of major significance, particularly if it involves other aircraft, so as to permit the facts to be ascertained immediately;
- b) as promptly as possible after landing, submit a completed Air Traffic Incident Report Form;
 - 1. for confirming a report of an incident made initially as in a) above, or for making the initial report on such an incident if it had not been possible to report it by radio;
 - 2. for reporting an incident which did not require immediate notification at the time of occurrence.

1.14.3.2 An initial report made by radio should contain the following information:

- a) aircraft identification;
- b) type of incident, e.g. aircraft proximity;
- c) the incident; 1. a) and b); 2. a), b), c), d), n); 3. a), b), c), i); 4. a), b);
- d) miscellaneous: 1. e).

1.14.3.3 The confirmatory report on an incident of major significance initially reported by radio or the initial report on any other incident should be submitted to The Aviation Safety Board, P.O. Box 586, Kingdom of Bahrain or to the ATS Reporting Office of the aerodrome of first

landing for submission to The Aviation Safety Board. The pilot should complete the Air Traffic Incident Report Form, supplementing the details of the initial reports as necessary.

Note: *Where there is no ATS Reporting Office, the report may be submitted to another ATS unit.*

1.14.3.4 The pilot should complete the Air Traffic Incident Report Form (see **ENR 1.14.4.2** - ICAO model Air Traffic Incident Report Form, supplementing the details of the initial reports as necessary.

1.14.4 Purpose of reporting and handling of the form

1.14.4.1 The purpose of the reporting of aircraft proximity incidents and their investigation is to promote the safety of aircraft. The degree of risk involved in an aircraft proximity incident should be determined in the incident investigation and classified as "risk of collision", "safety not assured", "no risk of collision" or "risk not determined".

1.14.4.2 The purpose of the form is to provide investigatory authorities with as complete information on an air traffic incident as possible and to enable them to report back, with the least possible delay to the pilot or operator concerned, the result of the investigation of the incident and, if appropriate, the remedial action taken.

AIR TRAFFIC INCIDENT REPORT FORM		
<i>For use when submitting and receiving reports on air traffic incidents. In an initial report by radio, shaded items should be included.</i>		
A — AIRCRAFT IDENTIFICATION	B — TYPE OF INCIDENT 	
C — THE INCIDENT		
1. General		
a) Date / time of incident UTC b) Position		
2. Own aircraft		
a) Heading and route b) True airspeed _____ measured in () kt _____ () km/h _____ c) Level and altimeter setting d) Aircraft climbing or descending () Level flight () Climbing () Descending e) Aircraft bank angle () Wings level () Slight bank () Moderate bank () Steep bank () Inverted () Unknown f) Aircraft direction of bank () Left () Right () Unknown g) Restrictions to visibility (select as many as required) () Sunglare () Windscreen pillar () Dirty windscreen () Other cockpit structure () None h) Use of aircraft lighting (select as many as required) () Navigation lights () Strobe lights () Cabin lights () Red anti-collision lights () Landing / taxi lights () Logo (tail fin) lights () Other () None i) Traffic avoidance advice issued by ATS () Yes, based on radar () Yes, based on visual sighting () Yes, based on other information () No j) Traffic information issued () Yes, based on radar () Yes, based on visual sighting () Yes, based on other information () No k) Airborne collision avoidance system — ACAS () Not carried () Type () Traffic advisory issued () Resolution advisory issued () Traffic advisory or resolution advisory not issued l) Radar identification () No radar available () Radar identification () No radar identification m) Other aircraft sighted () Yes () No () Wrong aircraft sighted

NIL

INTENTIONALLY BLANK

ENR 5. NAVIGATION WARNINGS**ENR 5.1 PROHIBITED, RESTRICTED AND DANGER AREAS****5.1.1 CLASSIFICATION**

5.1.1.1 All airspace in which a potential hazard to aircraft operations may exist and all areas over which the operation of civil aircraft may, for one reason or another, be restricted either temporarily or permanently, are classified according to the following three types of area as defined by ICAO.

5.1.1.1.1 PROHIBITED AREA

An airspace of defined dimensions, above the land areas or territorial waters of a State, within which the flight of aircraft is prohibited. This term is used only when the flight of civil aircraft within the designated airspace is not permitted at any time under any circumstances.

5.1.1.1.2 RESTRICTED AREA

An airspace of defined dimensions, above the land areas or territorial waters of a State, within which the flight of aircraft is restricted in accordance with certain specified conditions. This term is used whenever the flight of civil aircraft within the designated airspace is not absolutely prohibited but may be made only if specified conditions are complied with. Thus, prohibition of flight except at certain specified times leads to the designation of the airspace as a "Restricted Area", as would prohibition except in certain meteorological conditions. Similarly, prohibition of flight unless special permission has been obtained leads to the designation of a "Restriction Area". However, conditions of flight imposed as a result of application of the Rules of the Air or air traffic services practices or procedures, (For example, compliance with minimum safe heights or with rules stemming from the establishment of controlled airspace) do not constitute conditions calling for designation of a "Restricted Area".

5.1.1.1.3 DANGER AREA

An airspace of defined dimensions within which activities dangerous to the flight of aircraft may exist at specified times. This term is used only when the potential danger to aircraft has not led to the designation of the airspace as "Restricted" or "Prohibited". The effect of the creation of the Danger Area is to caution operators or pilots of aircraft that it is necessary for them to assess the dangers in relation to their responsibility for the safety of their aircraft.

5.1.2 GENERAL

5.1.2.1 The TYPE of area is indicated by the letters:

"D" for Danger - followed by number 1 to 39

"P" for Prohibited - followed by number 40 to 49

"R" for Restricted - followed by number 50 and above

5.1.2.2 Each Area is described in a tabulation which indicates:

Its lateral and vertical limits

The type of restriction or hazard involved

The time at which the area is active, and

Any other pertinent information

5.1.2.3 The positions of these Areas are also shown on the Airspace Charts, see **ENR 6**.

5.1.2.4 Altitudes are given in feet.

ENR 5.6 WILDLIFE MANAGEMENT**5.6.1 BAHRAIN INTERNATIONAL AIRPORT (OBBI)**

Proximity to the sea provides a constant risk of bird-strike. Of greatest risk to aircraft are migratory birds, which are present in increased numbers during the winter.

Critical area infringements are exacerbated during high tide when birds search for roosts located on the airfield. Significant numbers of birds are attracted to any standing water, so extra caution should be exercised following periods of rain or when standing water is observed in the runway strip.

Any bird-strike event should be reported to ATC as soon as possible, as BIA employs a management strategy which is constantly updated.

5.6.2 BAHRAIN SAKHIR AIRBASE (OBKH) & ISA AIRBASE (OBBS)**5.6.2.1 Location and Habitat**

1. Sakhir airbase is situated in the middle of Bahrain on the western side of the highest point on the island, Jabal Al Dukan. The habitat is essentially semi-desert with tufts of scrub grass and occasional small desert plants and occasional naturally occurring small trees of around 4 meters in height.
2. The airfield is bordered by small ridges to the west and to the east by rising ground towards the Jabal Al Dukan. To the east and west there is very little vegetation; however, on the runway approaches to the north and south, there are artificially planted large gardens. There are date palms and small and medium sized shrubs and trees up to 7 metres in height which can attract birds.
3. The climate is hot and dry in summer with temperatures normally reaching the mid forty degrees centigrade during July and August. In winter it is normally mild and frost free, staying mainly dry with the occasional day of heavy rain which can cause some flooding.
4. As Bahrain is an island, the airbase is subject to sea influences and strong winds can be a frequent occurrence causing rising sand, dust and sand storms.

5.6.2.2 Wildlife

1. Wildlife activity around the base is assessed as light. Whilst, the occasional feral dog has been seen, the airfield is protected by fencing and there have been no incursions on the airfield since the fencing has been strengthened and repaired.
2. Bird activity is assessed as very light in summer and light in winter. Occasional flocks of gulls have been sighted on the airfield in winter, other bird activity is confined to small numbers of doves, plovers, lapwings and small game birds (Partridge) that are often seen throughout the year in small numbers of 2-6 individuals rather than flocks. Mainly in spring and autumn, small groups of ducks of around 3-5 in number have been observed crossing the airfield on an occasional basis.

AD 1. AERODROMES / HELIPORTS - INTRODUCTION**AD 1.1 AERODROME / HELIPORT AVAILABILITY AND CONDITIONS OF USE****1.1.1 General conditions**

1.1.1.1 The conditions under which aircraft may land, be parked, housed or otherwise be dealt with at the aerodromes under the control of the administrations of the Kingdom of Bahrain.

- a) The fees and charges for landing, parking or housing of aircraft, as notified, from time to time by the various administrations concerned shall be published in the AIP BAHRAIN FIR, or by NOTAM. Unless otherwise agreed in advance the administration concerned shall levy reasonable fees and charges, as determined from time to time, for services and / or supplies furnished by, or on behalf of the administration to aircraft any aerodrome under its control. Such fees and charges as referred to above shall accrue from day to day and be payable to the administration on demand.
- b) The administration shall have a lien on the aircraft, its parts and accessories, for such fees and charges as aforesaid.
- c) If payment of such fees and charges is not made to the administration within fourteen days after a letter demanding payment thereof has been sent by post to the registered owner of the aircraft, the administration shall be entitled to sell, remove destroy or otherwise dispose of the aircraft, and any of its parts and accessories, and to apply the proceeds from so doing to the payment of such fees and charges.
- d) Neither the particular administration nor any servant of agent of the government shall be liable for the loss of, or damage to, the aircraft, its parts or accessories or any property contained in the aircraft, however such loss or damage may arise, occurring whilst the aircraft is on any of the aerodromes under the control of a particular administration, or is in the course of landing or taking - off at any such aerodrome, or of being removed or dealt with elsewhere, for the purposes of **AD 1.1.3** of these conditions.

1.1.1.2 Landings made other than at an international aerodrome / heliport or designated alternate aerodrome / heliport

If a landing is made elsewhere than at an international airport or a designated alternate airport the pilot - in - command shall report the landing as soon as possible to the health, customs and immigration authorities of the state in whose territory the aircraft has landed. This notification may be made through the air radio channels if this method of communication is available.

The pilot - in - command is responsible for ensuring that:

- a) If permission has not been granted to the aircraft at the previous landing, contact between other persons on the one hand and the passengers and crew on the other is avoided.
- b) That cargo, baggage and mail are not removed from the aircraft except as provided below.
- c) Any foodstuff of overseas origin, or any plant material, is not removed from the aircraft except where local food is unobtainable. All food refuse, including peelings, cores and stones of fruit, etc., must be collected and returned to the galley refuse container, the contents of which should not be removed from the aircraft except for hygiene reasons, in which case they must be destroyed by burning or deep burial.

1.1.1.3 Traffic of persons and vehicles on aerodrome**1.1.1.3.1 Demarcation of zones**

The grounds of each aerodrome are divided into two zones:

- a) A Public zone comprising the part of the aerodrome open to the public;
- b) A restricted zone comprising the rest of the aerodrome.

1.1.1.3.2 Movement of persons

1.1.1.3.2.1 Access to the restricted zone is authorized only under conditions prescribed by the special rules governing the aerodrome.

1.1.1.3.2.2 The customs, police and health inspection offices and premises assigned to transit traffic are normally accessible only to passengers, to staff of public authorities and to airlines, and to authorized persons in the pursuit of their duty.

1.1.1.3.2.3 The movement of persons having access to the restricted zone of the aerodrome is subject to the conditions prescribed by the air regulations and the special rules laid down by the person responsible for the management of the airport.

1.1.1.3.3 Movement of vehicles

1.1.1.3.3.1 The movement of vehicles in the restricted zone is strictly limited to vehicles driven, or used by, persons carrying a traffic permit or an official card of admittance.

1.1.1.3.3.2 Drivers of vehicles, of whatever type, driving within the confines of the aerodrome must respect the direction of the traffic, the traffic signs and the posted speed limits, and generally comply with the provisions of the highway code and with the instructions given by the competent authorities.

1.1.1.3.4 Policing

Care and protection of aircraft, vehicles, equipment and goods for which the aerodrome facilities are used are not the responsibility of the state or any concessionaire, who cannot be responsible for loss or damage which is not incurred through action by them or their agents.

KINGDOM OF BAHRAIN

SPECIAL REGULATIONS FOR AIRPORT USE

1.1.1.4 Conditions applicable to the landing, parking, or storage of aircraft on aerodromes under the control of Civil Aviation Affairs

1.1.1.4.1 An authorized official from Civil Aviation Affairs may at any time order an aircraft operator either to move a parked aircraft to another position or to remove it from the airport. Failure to comply with the order, within the period specified in it, will render the operator liable to a special charge, equivalent to five times the standard parking charge, for every day or part of a day during which aircraft remains in position after the period specified in the order has expired.

1.1.1.4.2 It is mandatory for all aircraft arriving / departing from the Kingdom of Bahrain to employ the services of the Handling Agent.

1.1.1.4.3 BAHRAIN INTERNATIONAL airport is a civilian airport and for reasons of safety, diversions to the airport by military aircraft shall only be permitted under the following circumstances:

1. Diversion to the airport by military combat aircraft which are fully loaded (i.e. armed) shall not be permitted under any circumstances.
2. Military combat aircraft not loaded (i.e. unarmed) shall be permitted to divert to the airport in cases of a declared emergency and as a matter of last resort.
3. Procedures for diversions by non combat military aircraft remain as at present.

In all cases the preferred diversion airport for BAHRAIN INTERNATIONAL airport should be BAHRAIN / ISA AIRBASE.

1.1.1.4.4 All military fixed wing tactical aircraft will not be permitted to arrive to BAHRAIN INTERNATIONAL airport daily between the following timings: 1430 - 1630.

Enquiries should be made to:

Bahrain Airport Services (BAS)
TEL: +973 17321443 / +973 17321453
Telefax: +973 18335304
Telex: 8971 BASBA BN
AFS: OBBIXHAX
SITA: BAHKBXH

VHF AIR / GRD: 131.900 MHZ

Call sign: BAS OPERATIONS

1.1.1.4.5 Carriage of explosives, arms and ammunition

1.1.1.4.5.1 The carriage of explosives, arms and ammunition in aircraft arriving at, departing from, or in transit through BAHRAIN INTERNATIONAL airport is prohibited without prior permission from the Ministry of the Interior (see **GEN 1.1**)

1.1.1.4.5.2 The prohibition stated in **AD 1.1.1.4.3** does not apply to arms and ammunition which the State of Registry of the aircraft allows to be carried for the protection of persons on board the aircraft.

1.1.1.5 Dangerous goods

The carriage of dangerous goods in aircraft arriving at, departing from, or in transit through BAHRAIN INTERNATIONAL airport and Bahrain sovereign Airspace shall comply fully with, or be to no less a standard than that specified in, the latest edition of:

Government Legislation, Decree or Instruction.

ICAO Annex 18 to the Convention on International Aviation

ICAO Doc 9284 - AN / 905, Technical Instructions for the Safe Transport of Goods by Air.

Instructions and Notices issued by the Under Secretary for Civil Aviation.

1.1.2 Use of military air bases

Kingdom of Bahrain

General

Use of military air bases in the Kingdom of Bahrain with other than State registered aircraft may be made solely when prior permission has been obtained.

The use of military air bases as alternate aerodromes may likewise be made solely when prior permission thereto has been obtained.

BAHRAIN / ISA AIRBASE is designated as an emergency diversion aerodrome for BAHRAIN INTERNATIONAL airport.

A permission may at any time be withdrawn with immediate effect, should circumstances so require.

Submission of application

Application to use a military air base shall be submitted in writing well in advance of the intended flight to the Bahrain Defence Force General Headquarters.

The address is:

Bahrain Defence Force
War Operation Room
P.O. Box 245
Kingdom of Bahrain

Rules and conditions

Operations on the air base must be carried out in accordance with the rules and conditions stated below with due regard to such other conditions as may have been stipulated for each individual permission.

A flight plan shall be submitted for each flight. During operations in military airspace or at a military air base, the pilot - in - command shall closely adhere to any instruction given.

The Commander of the air base establishes the rules which are to be observed by flight crew members and passengers concerning security measures, traffic and stays at the air base.

Photographing from the air or on the ground is totally prohibited at all military bases.

Flight crew members, and ground personnel shall immediately report any violations.

Bahrain Defence Force shall not be liable for the theft, fire-, water or other damage to aircraft, their equipment, flight crew members, passengers, cargo, etc. caused by civil aircraft, flight crew members or passengers to Defence Force material, buildings and personnel within the area of an air base.

1.1.3 Low visibility procedures (LVP)

1.1.3.1 All taxi routes are available during (LVP) operations subject to ATC clearance.

1.1.4 Aerodrome operating minima

Promulgation of an aerodrome as available for Category II or Category III operations means that it is suitably equipped and that procedures appropriate to such operations have been determined and are applied when relevant.

Promulgation implies that at least the following facilities are available:

ILS - certificated to relevant performance category.

Lighting - suitable for Category promulgated.

RVR System - may be automatic or manned system for Category II; will be automatic system for Category III.

Special Procedures and safeguards will be applied during Category II and III operations. In general, these are intended to provide protection for aircraft operating in low visibilities and to avoid disturbance to the ILS signals.

Protection of ILS signals during Category II or III operations may dictate that pre- take-off holding positions are more distant from the runway than the holding positions used in good weather. Such holding positions will be appropriately marked and will display signs conforming to the specifications in Annex 14, Volume I on one or both sides of the taxiway; there may also be a stop bar of red lights. For aircraft taxiing off the runway during Category III operations exit taxiway center line lights are colour coded to facilitate notification of runway vacation and the colour coding ends at the boundary of the ILS critical / Sensitive Area. Pilots are required to make a "Runway Vacated" call on R / T when the aircraft has colour code of part of exit taxiway centre line lights, due allowance being made for aircraft size to ensure that the entire aircraft is clear of the ILS critical / Sensitive Area.

In actual Category II or III weather conditions pilots will be informed by ATC of any unserviceabilities in the promulgated facilities so that they can amend their minima, if necessary, according to their operations manual. Pilots who wish to carry out a practice Category II or Category III approach are to request practice Category II (or Category III) approach on initial contact with Approach Control. For practice approaches there is no guarantee that the full safeguarding procedures will be applied and pilots should anticipate the possibility of resultant ILS signal disturbance.

1.1.5 Runway friction measuring

BAHRAIN INTERNATIONAL airport

Friction Measuring surveys are conducted at BAHRAIN INTERNATIONAL airport four times per year. The Friction Classification Survey Table is displayed here:

Friction Classification Survey Table - BAHRAIN INTERNATIONAL airport							
1	2	3	4	5	6	7	8
Equipment	Design object ice for New Runway Surfaces	Maintenance Planning Level	Minimum Friction Level	Test Water Depth mm (tolerance)	Test Speed kph (tolerance)	Tyre Pressure Psi (tolerance)	Tyre
Grip Tester	Above 0.80	0.53	0.43	1 mm (+ / - 5 %)	65 (+ / - 5)	20 (+ / - 1)	Type A 10 x 3.6 - 5

Friction measuring devices are not used at BAHRAIN INTERNATIONAL airport on a daily operational basis.

Whenever water is present on the runway, a description of the runway surface conditions on the centre half of the width of the runway, including the possible assessment of water depth, where applicable, should be made available using the following terms:

DAMP - the surface shows a change of colour due to moisture

WET - the surface is soaked but there is no standing water

WATER PATCHES - significant patches of standing water are visible

FLOODED - extensive standing water is visible

1.1.6 Other information

NIL

AD 1.2 RESCUE AND FIRE FIGHTING SERVICES AND SNOW PLAN**1.2.1 Rescue and fire fighting services**

At aerodromes approved for scheduled and / or non - scheduled traffic with aeroplanes carrying passengers, Rescue and Fire Fighting Services, and in some cases also Sea Rescue Services, are established in accordance with regulations for civil aviation.

Note: For heliports special rules will apply.

Information about whether there is a service or not and also the extent of the service is given on the relevant page for each aerodrome.

Scheduled or non - scheduled traffic with aeroplanes carrying passengers are not allowed to use aerodromes without Rescue and Fire Fighting Services.

Each individual service is categorised to the table shown below. Temporary changes will be published by NOTAM.

Rescue and fire fighting services	
Aerodrome Category	Amount of water in litres for Production of performance level B Foam
7	12100
8	18200
9	24300
10	32300

1.2.2 Snow Plan

The local climate precludes the requirement for a snow plan.

1.2.3 De-watering Plan at Bahrain International Airport

Duration: Annually between 1st October until 1st May of the following year

During winter season, weather conditions usually get so unsettled to an extent that it may be unforeseeable practice to predict the weather condition with respect to rain and when and the amount of rain that could fall during then, as clouds would rapidly and largely start to develop at the area around Bahrain International Airport at which rain between shows to thunderstorms may be experienced. Therefore, it became essentially important to take all precautionary measures to ensure that a safe yet uninterrupted conduct of air navigation is implemented and is maintained at the airport throughout the whole rainy season.

In this context, Bahrain Airport Company for being the airport operator, has identified certain concourse locations which standing water and associated patches are believed to accumulate. Accordingly a number of nearly 10 pumps will be at the runway strip at a symmetrical distance of 135M from the runway centre-line with a max HGT of 1.5M, such pumps will immediately allow De-watering process to take place off the runway strip.

The attached diagram is clearly depicting various locations of the pumps within the runway strip with arrows pointing to either the gutter or the manhole where the water should drain.

AD 1.4 GROUPING OF AERODROMES / HELIPORTS

The criteria applied in grouping aerodromes / heliports for the provision of information in this AIP is as follows:

Primary / major international aerodrome / heliport

Aerodrome / heliport of entry and departure for international air traffic, where all formalities concerning customs, immigration, health, animal and plant quarantine and similar procedures are carried out and where air traffic services are available on a regular basis.

Secondary / other international aerodrome / heliport

Other aerodrome / heliport available for entry or departure of international air traffic, at which the formalities of customs, immigration, health and similar procedures and air traffic services are made available on a restricted basis to flights, with prior approval only.

National aerodrome / heliport

Aerodrome / heliport available only for domestic air traffic, including those military aerodromes / heliports where civil air traffic is allowed under certain conditions.

OBBI AD 2.20 LOCAL AERODROME REGULATIONS

(i) Operations on the Eastern Apron

(1) Stands 28-36

Following are the source of ground power available and shall be provided accordingly:

1. FEGP when serviceable
2. GPU - when FEGP is not serviceable
3. No APU is to be left running unless either a qualified person is in attendance or the APU has both an auto-shut

(ii) Operation on TWY (J)

TWY (J) is a viable for night operations subject to the following conditions:-

1. No centre line lights are provided other than the existing CAT-EYE reflectors.
2. No edge lights are provided other than the existing CAT-EYE reflectors.
3. No LEAD ON/LEAD off lights are provided.
4. STOP-BAR, at present, is illuminated continuously, where contrast and ON / OFF functionality still remains uncontrollable by ADC day and night.
5. Clearance to cross the STOP-BAR shall only be issued by ADC when deemed necessary in order for ACFT to proceed day and night.
6. FOLLOW-ME vehicle will be provided for all ACFT entering TWY (J) down to the engine-shut down markings day and night.
7. FOLLOW-ME vehicle will be provided for all ACFT leaving TWY (J) from the engine-start markings up to the stop-bar only. Pilot shall then request an individual clearance from ADC to cross the stop-bar for progressive taxiing day and night.

{iii} Single Engine Taxi

ICAO resolution A37-19 emphasizes the importance of the International Civil Aviation to limit or reduce the Carbon Dioxide emissions from aircraft within a state boundary. For this reason Bahrain has adopted a procedure which will help in reducing the emission of CO2 from aircraft and allow for airline fuel conservation. Single Engine Taxi Operations may be exercised by multi-engine aircraft provided the following conditions are met:

1. The Pilots should be familiar with Bahrain International Airport in terms of aerodrome layout.
2. Pilots executing Single Engine Taxi Operation, should comply to ATC instructions as may be issued during taxiing without any delay.

In addition to the above, Single Engine Taxi Operations shall NOT be used if one of the following cases prevails:

1. If taxi or parking will involve a turn of 180 degrees or more.
2. The aircraft is on the active RWY or requesting to cross the RWY.

{iv} Stop Bars Holding

Aircraft or vehicles shall not cross a runway holding point until they have received verbal clearance from ATC and the STOP BAR has been extinguished.

STOP BARS shall not be crossed without specific ATC clearance as follows. Unable to turn STOP BARS off. Cross Red STOP BAR.

{v} Transponder Setting

All Transponder equipped aircraft shall select transponder to standby or off, when fully parked on the stand or gate.

OBBI AD 2.21 NOISE ABATEMENT PROCEDURES

NOISE ABATEMENT PROCEDURES - BAHRAIN

1. Circuit directions at BAHRAIN INTERNATIONAL airport are:

RWY 30L/ 30R: right hand;

RWY 12L / 12R: left hand.

2. Departing and arriving flights are not permitted to operate within the eighty - degree arc subtended by the 180° and 260° Radials of the BAH DVOR, and containing the main Bahrain Islands. Exceptionally , flights which the Controlling Authority has deemed operationally essential may be permitted to operate within this arc, provided they can remain either visually clear of the land, or be vectored clear by BAHRAIN APPROACH.
3. Usage of reverse thrust:

Usage of reverse thrust more than idle is not permitted during landing between the hours of 2100 and 0300, unless an aircraft is in an emergency and has been cleared to use the reverse thrust by the ATC.

4. Engine Run Ups at BAHRAIN INTERNATIONAL airport

Between the hours of 2100 and 0300, testing of aircraft engines is permissible at ground idle power only. Settings above this, however brief, are not allowed.

OBBI AD 2.22 FLIGHT PROCEDURES

2.22.1 RNAV GNSS APPROACH

GNSS approach is part of the GPS service and is established at Bahrain, therefore, acquisition of such service could only be done by means of flying towards a number of way points which are prevailed along the approach phases within BAHRAIN TMA after which it will guide an aircraft to the final approach of the landing RWY, such procedure may only be flown using significant position co - ordinates that are stored in the aircraft's navigational data base.

a) RNAV GNSS APPROACH WAYPOINTS RWY 12L

Point	Co - ordinates
LOVAL	262406.31N 0502422.32E

BI602	261106.96N 0504654.00E
RW30R	261545.76N 0503851.75E

2.22.2 RVR RESTRICTIONS

No landing and take off will be allowed at BAHRAIN INTERNATIONAL airport if the reported RVR reading is 350 M or less.

OBBI AD 2.23 ADDITIONAL INFORMATION**Minimization of time of the RUNWAY**

A number of recent incidents have led to a reduction in the minimum requirement for runway separation between arriving and departing aircraft. The factors causing these incidents have been found to be:

1. Arriving aircraft delay to vacate the runway after landing and / or stop before the entire aircraft has vacated the runway.
2. Departing aircraft, having reported "ready" and been cleared for takeoff, delay on the runway before commencing takeoff roll.

Factors ATC considers:

1. IFR separation on final approach course may reduce to 3NM. This reduced separation minima enhances airspace efficiency and runway utilization.
2. For the purposes of issuing a takeoff or landing clearance to subsequent aircraft, a preceding aircraft is not considered to be clear of the runway until the arriving aircraft is completely clear of the runway or the departing is airborne.
3. in the order to achieve the maximum runway utilization, it is essential that landing aircraft vacate the runway without delay; and that the departing aircraft, once cleared for takeoff, commence takeoff roll without delay.
4. in the event of arriving or departing aircraft delaying on the runway, it may become necessary for the subsequent departing aircraft's takeoff clearance to be delayed; or for the subsequent arriving aircraft to be instructed to go around. Incidents of this nature have serious safety implication for all operators.

Pilots are, therefore, reminded of their responsibilities.

Arriving Aircraft

1. Plan their runway exit point prior to landing, it is preferred that aircraft landing Runway 12L vacate via taxiway 'F' or before; and that aircraft landing Runway 30R vacate via taxiway 'D' or before. Advise ATC as soon as practicable if unable to exit the runway as instructed.
2. Do not stop or reduce speed to less than required taxi speed prior to vacating the Runway completely.
3. Vacate the Runway expeditiously.

Departing Aircraft

1. Report "ready" only when ready for immediate takeoff.
2. Once cleared for takeoff, commence takeoff roll with minimum delay.

Area minimum altitude (AMA) Each 1° quadrilateral contains an area minimum altitude (AMA) which represents the lowest altitude which may be used under instrument meteorological conditions (IMC). The AMA provides a minimum clearance of 300 metres above all obstacles in the quadrilateral. It is represented in thousands and tens of metres above mean sea level. Example: 1140 metres 114

CIRCLING AUTHORIZATION AREA

APPLICABLE TO RWY 12L/30R DEPARTURE.

- 1) RWY 30R Expect right turn heading 350° M or RWY heading.
- 2) RWY 12L Expect left turn heading 070° M or RWY heading.
- 3) Departure Frequency 119.100 MHZ.

Heading assigned by ATC shall only be between 260° M through north to 180° M.

Procedures are only valid within 25 NM ARP.

No circling authorized between radials 180° M and 260° M clockwise.

Amendment: MAG VAR Value Updated.

BAHRAIN INTL.**OFF-AIRPORT, BIRD HAZARD LOCATIONS****Wildlife Information**

- Average mass (kg) of birds per survey at RWY12 Beach – Winter: 740kg Summer: 14kg
- Average mass (kg) of birds per survey at RWY30 Beach – Winter: 69kg Summer: 18kg
- Regular transit paths of pigeon, wader and gull species identified for pilot's attention on approach and departure to Bahrain Intl.

Pilot Use Information

- Prior to arrival/departure at BAH request ATC for the presence of birds in the approach and departure paths as well as current wind status request dispersal if location is unacceptable.

Warning:

- During periods of rainfall there are significantly higher levels of bird activity within the airport perimeters, especially around areas of standing water. All pilots are advised to maintain vigilance and exercise extreme caution.

INTENTIONALLY BLANK

NOTE: The minimum levels shown are based upon the correct QNH being used.

OBKH AD 2.20 LOCAL AERODROME REGULATIONS

NIL

OBKH AD 2.21 NOISE ABATEMENT PROCEDURES

Avoid overflight of OBP42 area to North of OBKH. RWY 35 MA turn at 3.0 DME. Minimum angle of bank 020°, maximum IAS 185 KT.

OBKH AD 2.22 FLIGHT PROCEDURESARRIVALS RWY 35 VIA EAST COAST OF BAHRAIN:

Plan arrival via OBBI. Expect radar vectors for JALYD (260002.0N 0504513.0E) thence KH35E (255001.38N 0503742.78E) to intercept of OBKH LOC or continue using RNAV GNSS approach.

ARRIVALS RWY 17

RWY 17 approaches will be utilized only in the event that adverse winds preclude the use of RWY 35. In the event that RWY 17 is used, aircraft will be radar vectored to north of BAHRAIN INTERNATIONAL airport and positioned for a straight - in approach to RWY 17 either by Visual approach or RNAV GNSS approach.

DEPARTURE RWY 35:

Track 353 DEG MAG
At 3.0 DME
Turn right MIN AoB 020 DEG MAX IAS 185 KT
Track DCT JALYD (260002.0N 0504513.0E)
Climb to 4000 FT, or as advised by ATC.

DEPARTURE RWY 17:

Track 173 DEG MAG
Climb to 700 FT
Turn left but not before DER
Climb to 4000 FT
Track to JALYD (260002.0N 0504513.0E). Or as advised by ATC.

OBKH AD 2.23 ADDITIONAL INFORMATION

Preferred operations: RWY 35 arrivals, RWY 17 departures.
